TABLE OF CONTENTS

1.0 Executive Summary

The intent of this study is to further verify the feasibility of electrification of HVAC systems for the typical large High School. NYC SCA has previously analyzed several electrification options for new school designs for PS/IS sized schools. This study has the following specific goals/objectives:

1. To further verify electrification HVAC Options feasibility by studying a larger project.
2. Determine potential energy and carbon emission savings associated with removing the use of fossil fuels from the large High School design by energy modeling proposed options. The underlying factor in this study is to reduce the greenhouse gas emissions associated with the use of the building.
3. Develop the incremental cost for the electrification options vs. the base case associated with this Large HS example.

For this electrification study, two (2) HVAC electrification system types were analyzed, developed, and compared to the Base Case model. Detailed electrification design drawings for both options were developed by the design team (Lilker Associates and DiDomenico). The options are summarized below. Detailed descriptions of these options can be found in section 3.0 of this report.

Option 1: Custom Heat Pump AHUs/RTUs, with electric resistance perimeter heat.

Option 2: Vertical Packaged Heating/Cooling/Ventilation (HCV) Units serving classrooms, custom heat pump AHUs/RTUs serving interior and public assembly spaces, VRF units coupled with a DOAS unit serving small offices and miscellaneous spaces, and electric resistance perimeter heat.

The partial table below (full table can be found in Section 4.0) shows that both options studied indicate comparable site and source EUIs as well as carbon and cost reductions, when compared to the SCA current standard design (i.e. Base Case).

Model Description	Electricity (kWh)	Natural Gas (therms)	GHG Emissions (tCO_2e)	Site Energy Use Index ($kBtu/ft^2$)	Source Energy Use Index ($kBtu/ft^2$)	Net Incremental Construction Cost Savings (%)
Large High School Base Case	608,340	9,978	209	23.8	49.0	
Large High School Option 1: Heat Pump AHU's/RTU's w/ Electric Resistance Perimeter Heat	723,349	0	186	19.1	48.7	3%
Large High School Option 2: Packaged HCV Units (Classrooms), Heat Pump AHU's/RTU's (Interior and PA Spaces), w/ Electric Resistance Perimeter Heat	761,989	0	196	20.1	51.3	3%

The following is the summary of the findings.

- Two (2) Electrification Options are feasible
- Electrification options well below 70 source EUI
- All options offer annual GHG reductions
- Electrification options less costly than the current SCA standard system
- All options meet SCA design objectives

A detailed summary of the electrification option results can be found in section 4.0, Table 4, of this report. This report discusses additional pros and cons of the options.

2.0 Project Approach

SCA has previously analyzed several electrification options for new school designs for PS/IS sized schools. The goal of this study is to further validate electrification design strategies for a large high school. As the power grid gets closer to 100% carbon neutral, the greenhouse gas usage of electrified buildings will also eventually become carbon neutral. New York State is expected to support this direction with various initiatives, which will accelerate the investment in renewables for the grid and in turn will make all electric buildings carbon neutral.

For this project, a large high school was selected as a prototype and the project team used the 60% architectural design of the building as a starting point.

The study approach was to select two (2) electrification design options from previous studies and engage the MEP Engineer (Lilker Associates) and Architectural design consultant (DiDomenico and Partners) to develop a full electrification design up to the "60% Design" level of detail. The designs were then energy modeled by OLA and the performance results compared with the Base Case. The design drawings were given to a cost estimating consultant (Ellana) to establish the total cost of each electrification option, as well as determine an incremental cost relative to the Base Case.

To establish the Base Case energy performance, the PS in Queens 60% energy model was used as a starting point. Basic building parameters such as size, geometry, spatial programming, etc. were established based on this prototype building. The prototype school is a 5 story, 130,000 ft^2 high school which includes classrooms, offices, cafeteria, kitchen, multi-purpose room (gymatorium), and support spaces. The baseline design HVAC system consists of the current SCA standard systems utilizing variable-air-volume (VAV) air handling units, air-cooled chiller, and condensing gas-fired boilers with hydronic perimeter heating system.

A computer simulation tool was used to assist in performing calculations for energy savings. The modeling software used was Department of Energy (DOE)-developed. DOE2 is a detailed, hourly, whole building energy analysis tool that can simulate multiple HVAC and lighting zones for complex buildings. For every hour of the year, DOE2 takes into account the many variables including: schedules for building occupancy (lights, people and equipment); climate (temperature, humidity, solar radiation, etc.) and HVAC equipment and system performance under actual operating conditions. A "three-dimensional" view of the building construction is generated to ensure accuracy. The DOE2-based simulation tool used for the modeling of the building is eQuest.

DOE2 provides a structured method to describe the building and its operations in detail. The model is capable of adjusting many parameters included but not limited to the following:

- Envelope components (U-factors, areas, etc.).
- Interior partitions.
- Occupancy by people.
- Plug loads such as office equipment, computers, etc.
- Other electricity using apparatus.
- Fuel oil, hot water and other process uses within the building.
- HVAC terminals and distribution.
- Primary heating equipment
- Mechanical cooling and heat rejection equipment.
- Cost structures including utility rates.

The baseline energy model or "Base Case" was updated to include six (6) energy conservation measures (ECMs) which are currently part of SCA standard designs going forward. A list of the specific ECMs added to the Base Case are detailed below.

The Base Case energy model also includes June 2020 SCA input standards for modeling of proposed school designs. It should be noted that certain model inputs for the HVAC systems in the Base Case such as ventilation, fan power, and zoning of systems were taken from the original Large High School prototype design. The following ECMs listed below were taken from the NYC SCA's Local Law 31 Low Energy Intensity Building Feasibility Study and are included in the two (2) electrification energy models.

1) Elevator ECM: Gearless Elevators with Regenerative Drives
2) Enclosure ECM: Wall Thermal Upgrades (R-30 Wall Insulation)
3) Enclosure ECM: Glazing Lower U-Value (U-0.25)
4) Enclosure ECM: Insulated Light Dispersion Panels (R-13)
5) HVAC System ECM: Oversized Ductwork and Piping
6) DHW System ECM: Low Flow Aerators

Detailed energy model inputs for the two (2) electrification options were based on design drawings provided by MEP Engineer, Lilker Associates, as well as Architect di Domenico and Partners. Inputs such as system zoning, fan power, equipment sizing, and performance data were taken from the design drawings and are different than the Base Case. The overall building architecture was not re-designed for this study. However, minor architectural modifications to the prototype building were required for Option 2. The changes consisted of modifications to the classroom window assemblies to accommodate the packaged HCV units. Refer to the architectural impact sections for each option under section 3.0 of this report.

Table 1 shows the floor plan and typical zoning as constructed in the energy model. Table 2 shows some of the 3D views of the energy model building. Table 3 shows a basic building metrics summary.

3.0 Electrification Designs

3.1 Base Case Design

OLA utilized the proposed Large High School design from SCA as the Base Case design. The Base Case incorporates the energy savings associated with the proposed ECMs mentioned in section 2.0 of the report in the energy model. The Base Case energy model was developed for this project to reflect specific energy conservation measures (ECMs) that are already part of the SCA school design standards going forward.

The Base Case model for this study was based on the original 60% design drawings provided by SCA for the prototype building, which follows typical SCA HVAC design standards. The systems in the Base Case include a hot water heating plant, chilled water plant, four (4) rooftop air-handling units with variable air volume (VAV) boxes serving individual zones with perimeter finned tube radiation (FTR), and several cabinet unit heaters, unit heaters, air curtains, etc. serving miscellaneous heated only spaces.

3.2 Option 1: Custom Heat Pump AHUs / RTUs, with Electric Resistance Perimeter Heat

This option analyzes removing the hot / chilled water systems from the Base Case and utilizing custom heat pump air-handling units (AHUs) / rooftop units (RTUs) (Figure 1) to handle the building heating and cooling loads. Electrification design drawings for this option, including floor plans, mechanical schedules, and equipment cutsheets, were developed by Lilker Associates and then modeled by OLA. The systems featured in this design include four (4) classroom rooftop units selected as heat pump units. The design team selected four (4) classroom RTUs rather than the two (2) in the prototype building design. This was done to limit the size of units to 60 tons which allowed for a manufacturer installed hot gas reheat option to be provided for dehumidification. The classroom units are packaged with built-in condensing units. Some of the units would require several remote condensing units to be installed on the roof as part of this design. The RTUs would be custom built to maintain the SCA design standards and include the integration of VRF condensing units with the AHUs (Figure 2).

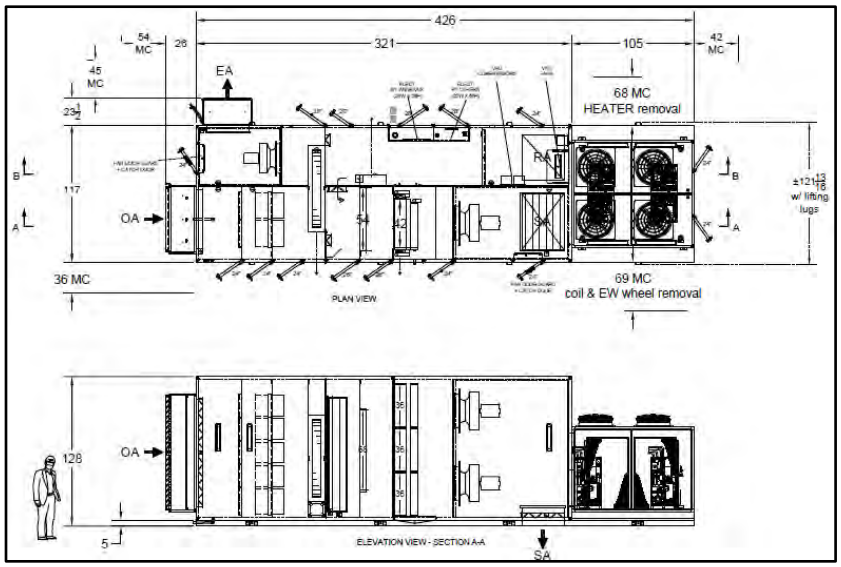

Figure 1. Typical Heat Pump RTU Diagram

Figure 2. Typical condensing unit used for split AHUs

The unit selections would include an energy recovery wheel as per SCA design standards. The units proposed under this study were selected with hot gas reheat coils for dehumidification, in lieu of the SCA previous standard sensible wheel. The custom RTUs selected are rated to provide a maximum 95°F supply air at a 13°F outside air temperature, although the units may operate a lower discharge air temperature in occupied heating mode relying on electric baseboard to trim spaces to final temperature. A typical mechanical room plan of the split type heat pump AHUs is shown in Figure 3 below. A typical roof plan of the units is shown in Figure 4. For AHUs located indoors, remote condensing units would be installed on the roof above (Figure 5).

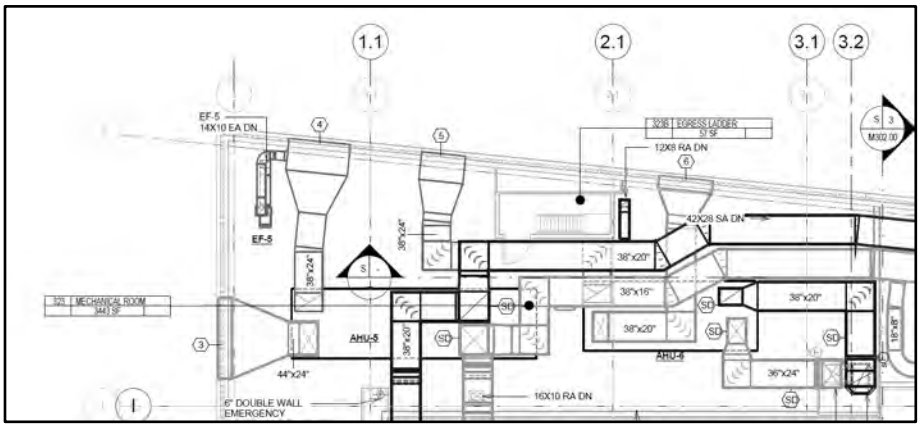

Figure 3. Typical heat pump AHU mechanical room plan

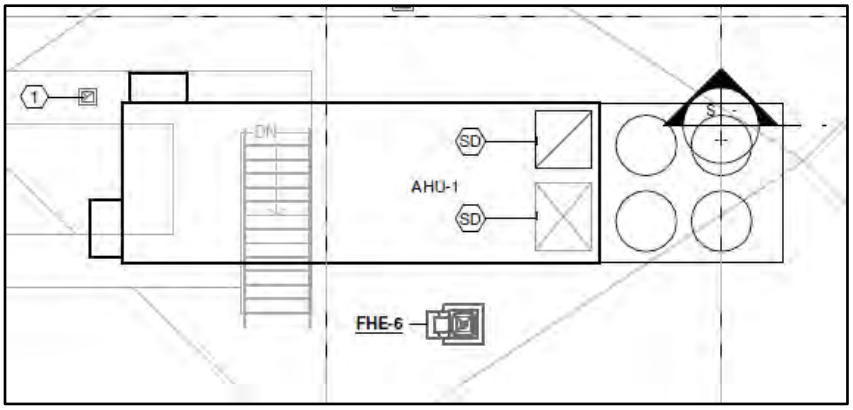

Figure 4. Typical heat pump RTU layout

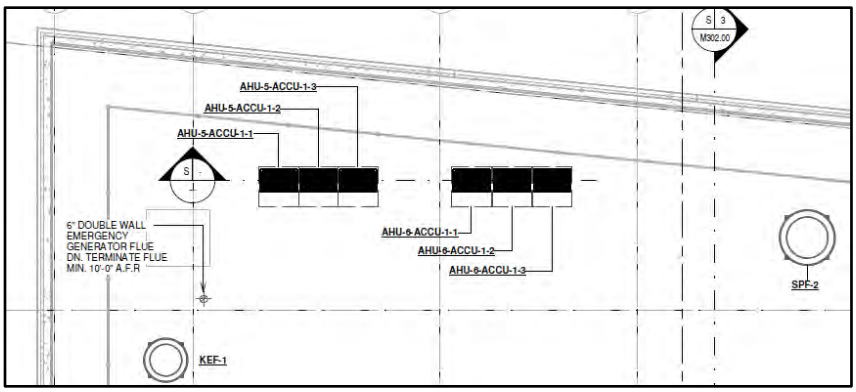

Figure 5. Typical heat pump AHU remote condensing units on roof

VAV boxes serving individual zones remain as in the Base Case, with the perimeter hot water FTR converted to electric. The electric resistance perimeter heat is intended to act as supplemental heat only. All “heat only” systems in the Base Case were also converted to electric and serve the same spaces as in the original design. Refer to Appendix A for the electrification design drawings for this option.

Option 1 Pros:

- High cooling and heating efficiencies for Heat Pump RTUs
- Has lower incremental cost than Base Case
- Has GHG Emissions savings compared to Base Case
- Lower source EUI than Base Case
- Does not require significant architectural changes to the prototype building.

Option 1 Cons:

- Probable need for second electric service
- Potential for longer refrigerant runs between AHU evaporator and condensing units, must be handled by design team

Architectural Impacts

Option 1 does not require significant architectural changes to the prototype building. One potential impact would be a reduction in the overall size of the rooftop playground area due to the installation of remote rooftop condensing units serving the indoor AHUs (see Figure 5 above). The outdoor condensing units associated with the RTUs would require additional dunnage area compared to the original design RTUs to accommodate the installation of condensing units (see Figure 4 above). However, there would be some dunnage decrease due to elimination of the air-cooled chiller. For the prototype building analyzed, the dunnage changes appeared to result in a net deduct in cost.

Electrical Service Analysis

A 4000A, 208Y/120 Volt, 3-Phase, 4-Wire electrical service as indicated in the SCA 60% design document will not be adequate for the building with electrification because of the increased electrical heating equipment loads. Cabinet unit heaters, convectors, hot water coils, and air curtains throughout the building would be changed from hot water to electric, VRF heat pumps were added in some spaces, and the electrical demand of the air handling units were increased. After adding these loads with appropriate demand factors and the lowest of all non-coincidental loads dropped, Lilker arrived at a total of 1764KVA which is equivalent to 4896Amps (5875 Amps with 20%

spare capacity) 208 Volt 3-phase. Therefore, the team proposes two (2) 3000 Amps electric services be used for the electrification design, each rated at 208Y/120V, 3-Phase, 4-Wire system.

The service feeders would enter the building through the foundation wall and terminate in the main switchboard room located on the 165th street side of the prototype building in the cellar. One service will energize a 3000 Amp switchboard in the same room and the other service will energize a 3000 Amp switchboard in the boiler room located on the 5th floor. See Electrical drawing E201.00 and E207.00 for location and drawing E501.00 for one-line diagram.

This option does not involve the construction of a new room since the switchboard room and the boiler room are sized adequate to house this equipment.

480V Service Considerations

As an alternative, we proposed a 480Y/277 Volt 3-Phase, 4-Wire electric service from Con Edison to energize the mechanical and lighting loads and 208Y/120 Volt feeders through a customer step-down transformer for the fire alarm system, power receptacle and low voltage system loads. Per our calculation, this would require only one (1) 3000Amp service and service equipment. The customer transformers would be installed inside the switchboard room, so there would be no need for a separate transformer room.

Since the prototype building is not in a flood zone, Con Edison would be responsible for installing an underground network protector, and network protector compartment at the transformer vault for the service feeders. The customer is not responsible for constructing a separate network protector room.

Per the SCA In-House design Engineer, Con Edison does not have 480Y/277 Volts system available on the street at the prototype building, so this was not a feasible option. A 480V service may be available for other buildings, if justification can be provided to Con Edison based on the demand load projected for the building. However, this option was not considered further for this study due to spatial and costing impacts that would result from adding this service and the network protector room that is required along with it.

Costing Analysis

Cost estimates for the two electrification options were provided by a cost consultant. Construction costs were developed for the base case and both options. Net incremental costs were developed for each electrification option by comparison with the base case building. The term “net” is used to include both the added costs of an electrified building, including new HVAC equipment, electrical upgrades, etc. and the deductions from removal of the HVAC equipment in the original design. An estimated 3% cost savings is associated with option 1.

3.3 Option 2: Vertical Packaged Heating Cooling Ventilation (HCV) Units, Custom Heat Pump AHUs / RTUs Serving Interior and PA Spaces, VRF Units Coupled With DOAS Unit Serving Small Classrooms, Offices, and Miscellaneous Spaces, w/ Electric Resistance Perimeter Heat

This option analyzes replacing the standard variable air volume (VAV) air-handling unit design with packaged HCV units equipped with high efficiency heat pump and cooling capability to serve most perimeter spaces (classrooms, offices, etc.) in the building (Figure 6). Electrification design drawings for this option, including floor plans, mechanical schedules, and equipment cutsheets, were provided by Lilker Associates and then modeled by OLA. A typical floor plan layout of an HCV system is shown below in Figure 7.

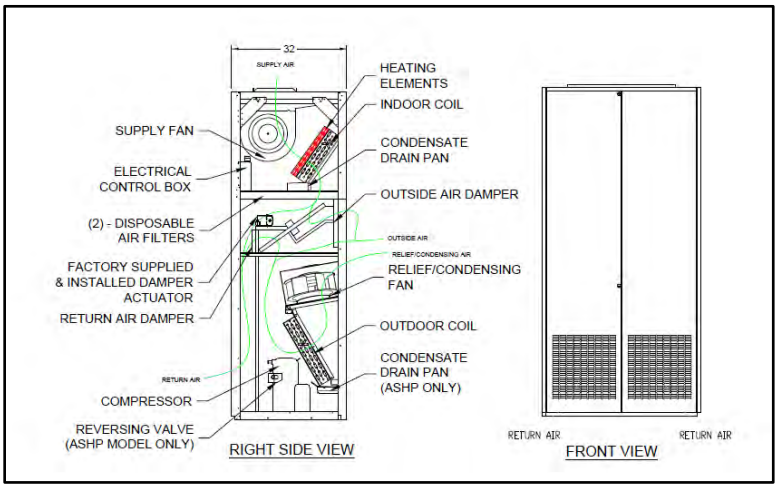

Figure 6. Typical Packaged HCV Diagram

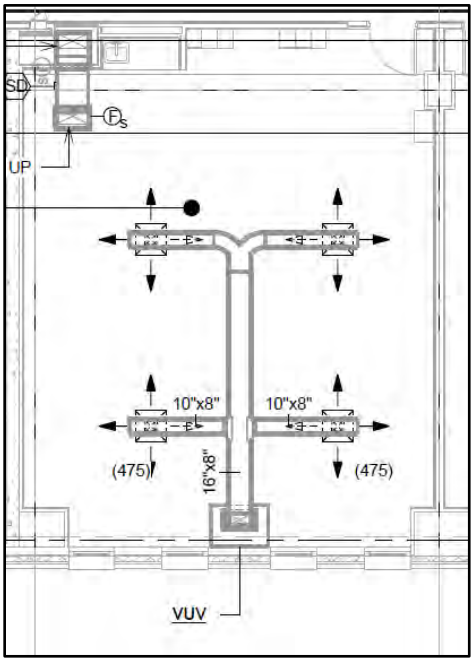

Figure 7. Typical HCV floor plan for classroom

The HCV units are supplied with an energy recovery wheel to preheat the outdoor air entering each space and include a backup electric heater (Figure 6) that is sized to handle the full heating load of a typical classroom. The electric heater would be sequenced to enable as required during extreme weather conditions to account for derating of the heat pump capacity, and as backup if compressors fail. The HCV's can also be installed with MERV-13 filtration, and the added fan power associated with these filters was included in the energy model.

Public assembly spaces (cafeteria, gymatorium), and interior spaces would still be served by heat pump AHUs/RTUs as described in Option 1. In addition, a variable refrigerant flow (VRF) system with indoor ceiling mounted fan coil units (Figure 8) would be installed to serve smaller perimeter classrooms, offices, and other miscellaneous spaces (Figure 9) that are considered impractical to accommodate HCV units. Since maintenance at the ceiling level is a concern, the number of spaces requiring such units would be kept within DSF's current limit on ceiling mounted units. These spaces would be coupled with a Dedicated Outdoor Air System (DOAS) (Figure 10) to provide ventilation, installed on the roof of the building.

Figure 8. Typical indoor VRF cassette serving small classrooms / offices

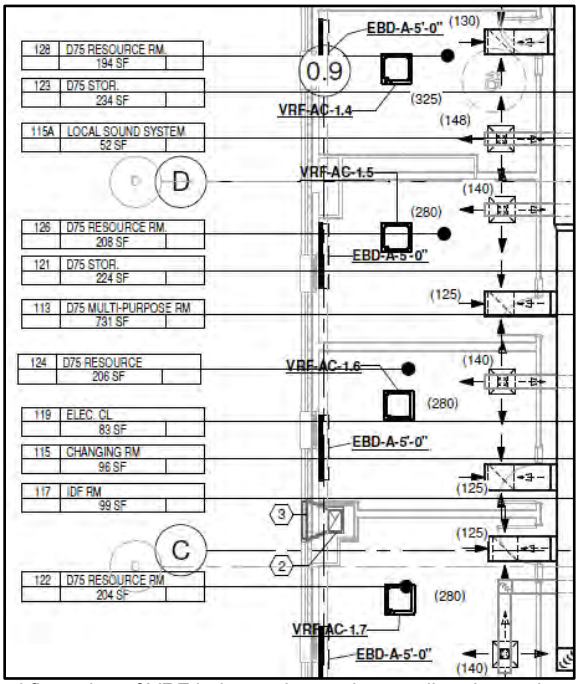

Figure 9. Typical floor plan of VRF indoor units serving small perimter classrooms / offices

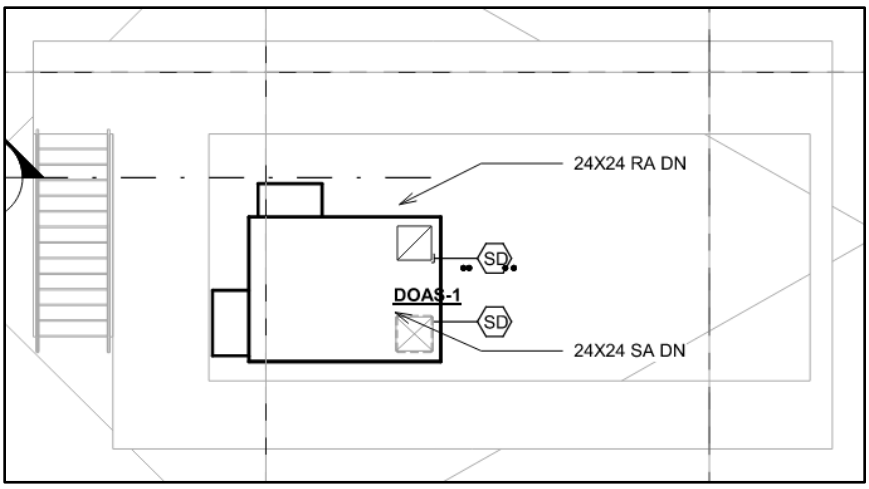

Figure 10. Roof plan layout of DOAS-1

This option utilizes electrical resistance perimeter heat but is only intended to operate as supplemental heat for spaces that are not served by HCV's (classrooms). All heat only systems in the Base Case were also converted to electric and serve the same spaces as in the original design. Refer to Appendix A for the electrification design drawings for this option.

Option 2 Pros:

- Individual zone control for classrooms
- Less ductwork, VAV boxes, etc.
- Lower fan power for classroom systems
- Has lower incremental cost than Base Case
- Has GHG Emissions savings compared to Base Case
- Potential cost savings from lower floor-to-floor ceiling height due to less ductwork
- Ability to stay in heat pump mode for full heating requirements
- For new addition projects with existing low floor-to-floor heights, allows addition floor elevations to be at the same elevation as the existing building

Option 2 Cons:

- Probable need for second electric service
- Potential to compromise building envelope performance by adding an intake louver in every classroom
- Less available interior space
- Unit ventilator air source heat pumps require auxiliary electric heat for extreme ambient conditions
- Large number of compressors throughout building will likely have higher maintenance costs than centralized equipment
- Additional Filter maintenance required
- Greater architectural impact compared to Option 1
- Potential for increased thermal bridging
- While still better than the base case for carbon emissions, the source EUI is higher than Base Case and Option 1
- Acoustic impact requires further analysis to understand if additional sound attenuation needs to be provided.

Architectural Impacts

The architectural impact for this option is greater than Option 1, primarily due to the work associated with installation of the packaged HCV unit exterior louvers. Design of the classroom windows would need to be modified in order to accommodate the unit outdoor air louver through the building wall. Several HCV arrangements were considered by the Architectural consultant for this option. For the purposes of this study, it was determined to locate the HCV units in the middle of the exterior classroom wall, where there was no window in the base case (Figure 11). As a result, the quantity of windows per classroom is not affected. Future building designs can further optimize the placement of the HCV's. For example, a corner installation if desired by project designers could be employed.

Figure 11. Typical Option 2 window elevation view

The overall shaft area required for ductwork routing through the building would also decrease as a result of this option, due to the individual HCV systems serving classrooms in lieu of the current SCA design. Similar to Option 1 above, a potential impact on the size of the rooftop playground area exists in this option as well. This is due to the installation of remote rooftop condensing units serving the indoor AHUs (see Figure 5 above).

Electrical Service Analysis

As mentioned in Option #1 above, 4000A, 208Y/120 Volt, 3-Phase, 4-Wire system electrical service as indicated in the SCA 60% design documents will not be adequate for the building with electrification because of the increased electrical heating equipment loads. Cabinet unit heaters, convectors, hot water coils, and air curtains throughout the building would be changed from hot water to electric, HCV heat pumps were added throughout the building to serve classrooms, and the electrical demand of the public assembly space air handling units were increased. After all loads have been added with appropriate demand factors and the lowest of all non-coincidental loads dropped, Lilker arrived at a total of 1550 KVA which is equivalent to 4303 Amps (5164 Amps with 20% spare capacity) 208 Volt 3-phase system. Therefore, the team

proposes two (2) 3000 Amps electric services be used for the electrification design, each rated at 208Y/120V 3 Phase 4-Wire system.

Similar to option 1 above, the service feeders will enter the building through the foundation wall and terminate in the main switchboard room located on the 165th street side of the prototype building in the cellar. One service will energize a 3000 Amp switchboard in the same room and the other service will energize a 3000 Amp switchboard in the boiler room located on the 5th floor. See Electrical drawing E201.00 and E207.00 for location and drawing E501.00 for one-line diagram.

This option does not involve the construction of a new room since the switchboard room and the boiler room is sized adequate to house this equipment.

480V Service Considerations

As an alternative, we proposed a 480Y/277 Volt 3-Phase, 4-Wire electric service from Con Edison to energize the mechanical and lighting loads and 208Y/120 Volt feeders through a customer step-down transformer for the fire alarm system, receptacle and low voltage system loads. Per our calculation, this would have required only one (1) 3000Amp service and service equipment. The customer transformers will be installed inside the switchboard room, so there would be no need for a separate transformer room.

Since the prototype building is not in a flood zone, Con Edison would be responsible for installing an underground network protector, and network protector compartment at the transformer vault for the service feeders. The customer is not responsible for constructing a separate network protector room.

As mentioned in option 1 above, Con Edison does not have 480Y/277 Volts system available on the street at the protype building, so this may not be a feasible option. A 480V service may be available for other buildings, if justification can be provided to Con Edison based on the demand load projected for the building. However, this option was not considered further for this study due to spatial and costing impacts that would result from adding this service and the network protector room that is required along with it.

Costing Analysis

Cost estimates for the two electrification options were provided by a cost consultant. Construction costs were developed for the base case and both options. Net incremental costs were developed for each electrification option by comparison with the base case building. The term “net” is used to include both the added costs of an electrified building, including new HVAC equipment, electrical upgrades, etc. and the deductions from removal of the HVAC equipment in the original design. An estimated 3% cost savings is expected with option 2.

4.0 Results

Table 4. Electrification Options Annual Energy Usage Summary

Model Description	Electricity (kWh)	Natural Gas (therms)	GHG Emissions (tCO_2e)	Site Energy Use Index ($kBtu/ft^2$)	Source Energy Use Index ($kBtu/ft^2$)	Peak Demand (kW)	Electricity Saved (kWh)	Natural Gas Saved (therms)	GHG Emissions Saved (tCO_2e)	Site Energy Saved ($kBtu/ft^2$)	Source Energy Saved ($kBtu/ft^2$)	Demand Saved (kW)	Annual Energy Cost ($/year)	Effective Blended Electricity Rate ($/kWh)	Energy Cost Index ($/SF/yr)	Annual Energy Cost Increase ($/yr)	Net Incremental Construction Cost Savings (%)
Large High School Base Case	608,340	9,978	209	23.8	49.0	355							$132,272	$ 0.223	$1.02

REFERENCED NOTES:

(1) The "Base Case" Designs represent the design based on current SCA standards.
(2) Each electrification option is compared to the respective "Base Case" Design.
(3) An electricity site to source conversion factor of 2.55 was used, per NYSERDA NYS data.
(4) GHG Emissions use data per "Inventory of New York City Greenhouse Gas Emissions in 2016."
(5) Energy model massing based on school Q497 60% Design.
(6) Option 2 includes a VRF / DOAS system serving small classrooms, offices and miscellaneous spaces.
(7) Construction Costs provided by construction cost consultant.
(8) tCO_2e is metric tons of carbon dioxide equivalent.

4.1 Electrification End Use Summaries

Figure 12 shows the annual site energy intensity by end use (kBtu/ft^2) for the Large High School Base Case compared with the electrification options developed for this study. The figure indicates that gas heating and kitchen equipment accounts for most of the Base Case energy consumption.

As seen in the figure below, both electrification options have a lower site EUI than the Base Case. This is primarily due to the removal of the gas-fired heating plant, which is relatively inefficient compared to the heating and cooling efficiencies (COP's) of the electric heat pump units. This can be seen when comparing the gas heating energy of the Base Case (7.7 kBtu/ft^2) to the electric space heating energy of the two electrification options (4.8 and 3.7 kBtu/ft^2 respectively). The best EUI from the model results is Option 1 (Heat Pump AHUs/RTUs). This option has a total site EUI of 19.1 kBtu/ft^2 and benefits from having the lowest overall fan energy and space cooling energy out of the options.

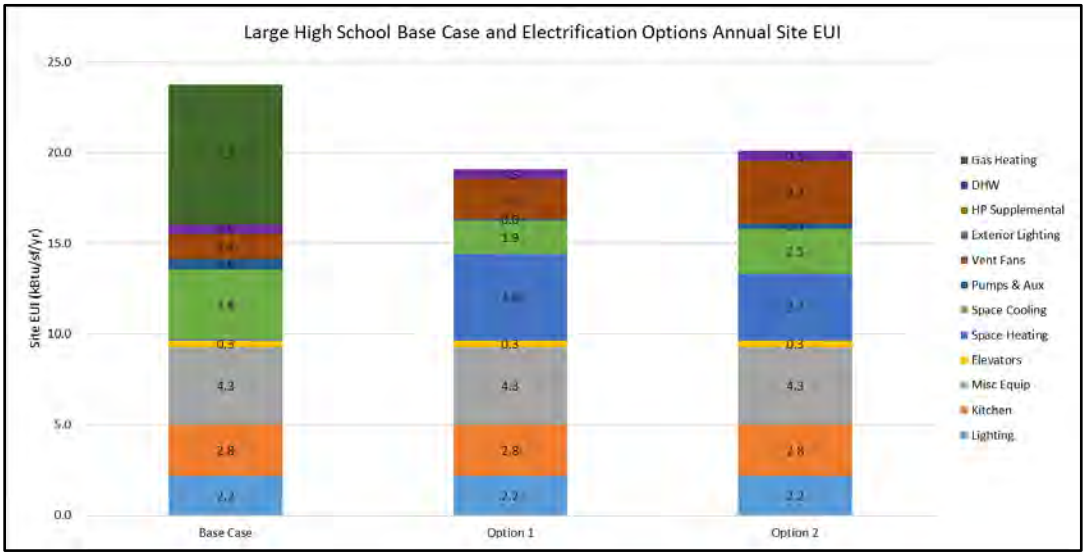

Figure 12. Large High School Base Case and Electrification Options Annual Site EUI

Figure 13 shows the annual source energy intensity by end use (kBtu/ft^2) for the Base Case compared with the electrification options. Due to the source EUI conversion factors for electricity (2.55) both options have a higher source EUI than the Base Case. It was noted that Option 2 (Packaged HCV's) has the highest source EUI primarily due to having the higher fan energy and space cooling energy compared to Option 1.

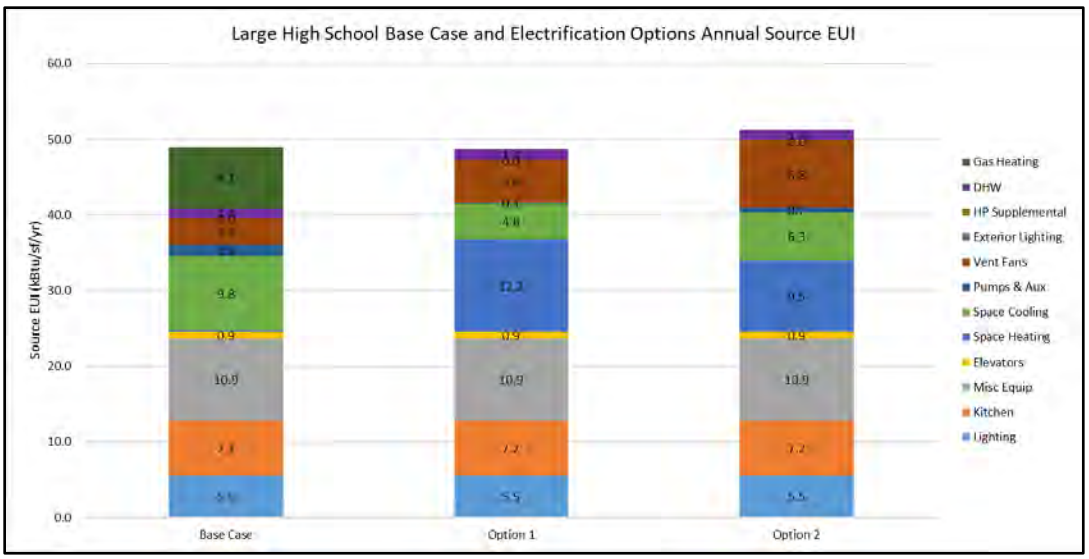

Figure 13. Large High School Base Case and Electrification Options Annual Source EUI

Figure 14 shows the annual cost breakdown by end use for the Base Case and the electrification options. It was noted that both the options have higher annual utility costs than the Base Case, due to higher electric demand and energy rates. Option 1 has the highest annual cost, due mainly to the large demand penalty associated with the large sized heat pump units and large quantity of electric resistance perimeter heat compared to Option 2.

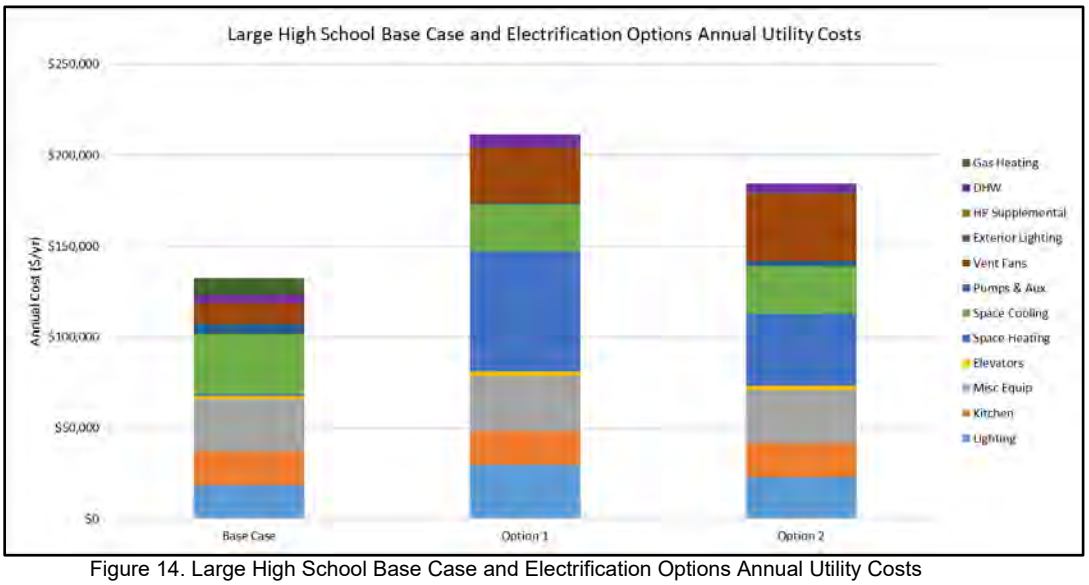

Figure 14. Large High School Base Case and Electrification Options Annual Utility Costs

5.0 Conclusions

The difference in carbon emissions between electric systems and standard gas systems is significant today and will be greater in the future. The electrification options presented in this study show a significant reduction in greenhouse gas emissions over the base case and would meet current requirements of Local Law 31 2016.

The electrification site EUI is improved over the SCA base case option but is not always an improvement in source EUI. Over time, improvements will be made in the regional grid, and the source EUI differences will be further improved over the present SCA baseline. New York State has made commitments to achieving sustainable energy goals statewide, which will continue to reduce carbon emissions associated with the electrical grid.

It should be noted that as the site and source energy results approach lower values, the differences between options may be considered small enough to be within the potential error of an energy modeling process.

NOTES:
1. ALL AHU FAN MOTORS SHALL COMPLY WITH THE ASHRAE 90.1 2013 EFFICIENCIES REQUIREMENT.
2. COILS SHALL HAVE COPPER TUBES WITH ALUMINUM FINS (MAX. 14 FINS/IN.)
3. UNITS SHALL BE PROVIDED WITH 2" PLEATED PRE FILTER MERV 8 AND 12" MERV-13 PLEATED FINAL FILTER FOR SUPPLY AIR STREAM AND 2" PLEATED PRE FILTER MERV 8 UPSTREAM OF THE ENERGY WHEEL.
4. PROVIDE SEAMLESS STAINLESS STEEL DRAIN PANS.
5. SPECS AND DRAWINGS FOR ADDITIONAL INFORMATION.
6. UNITS SHALL BE PROVIDED WITH SINGLE POINT POWER SUPPLY CONNECTION WITH UNIT MOUNTED MAIN ,SAFETY DISCONNECT SWITCH, CONTROL PANEL, GFI RECEPTACLES AND LAMPS. DISCONNECT SWITCH MAX. HEIGHT IS 79" TO ITS CENTER LINE.
7. ALL AHUS (SUPPLY & EXHAUST SECTIONS) SHALL BE PROVIDED WITH SMOKE DETECTORS
8. SMOKE DETECTORS FOR SUPPLY AND EXHAUST SECTIONS SHALL BE FURNISHED BY ELECTRICAL CONTRACTOR FOR FACTORY INSTALLATION AND WIRING.
9. ALL AHU FANS (SUPPLY & RETURN) SHALL BE PROVIDED WITH VARIABLE FREQUENCY DRIVE.
10. ACOUSTICAL PERFORMANCE FOR ALL THE UNITS SHALL BE AS INDICATED IN SPECIFICATION #15852 & 15935
11. OVERALL DIMENSIONS DO NOT INCLUDE OA INLET & SPILL AIR HOODS.
12. ALL TOTAL STATIC PRESSURES SHALL INCLUDE DX COIL, HOT GAS REHEAT COIL & DIRTY FILTER (ALL FILTERS) ALLOWANCES.
13. MANUFACTURER SHALL PROVIDE AHUs WITH KNOCK-OUTS AT BOTTOM OF UNITS TO ALLOW FOR POWER FEED FROM THE BOTTOM.
14. PROVIDE SMOKE DAMPERS FOR SUPPLY AND RETURN SECTIONS OF AHU-1, AHU-2 & AHU-3
15. PROVIDE VIBRATION ISOLATORS ON THE EXTERIOR OF ALL UNITS.
16. PROVIDE RUBBER ISOLATORS FOR ALL FANS AND COMPRESSORS.
17. REFRIGERANT SHALL BE 410A.
18. UNITS SHALL BE PROVIDED WITH OEM CONTROLS.

NOTES:
1. ALL ROOF MOUNTED FANS TO BE PROVIDED WITH 24" HEIGHT PREFABRICATED ROOF CURB AND 12" HIGH EXTENSION CURB WITH GASKETED ACCESS DOOR.
2. KEF-1 SHALL BE "UL" LISTED FOR GREASE REMOVAL AND PROVIDED WITH GREASE TROUGH, HEAVY DUTY REGREASABLE BEARINGS IN CAST IRON PILLOWBLOCK HOUSINGS.
3. ALL INLINE FANS SHALL BE PROVIDED WITH BELT GUARD, INLET GUARD, VIBRATION ISOLATORS.
4. KEF-2 SHALL RUN WHEN AHU-4 IS RUNNING AND WHILE KEF-1 IS OFF.
5. ALL FANS SHALL BE PROVIDED WITH DISCONNECT SWITCH.
6. FANS SHALL BE PROVIDED WITH HIGH EFFICIENCY MOTOR THAT MEET THE REQUIREMENTS OF THE 2016 NYCECC SECTION C403.4.4.4 AND ASHRAE 90.1-2013. FAN MOTORS LESS THAN 1 HP MUST BE AT LEAST 70% EFFICIENT.
7. FANS SF-1 & SF-2 SHOWN ON DWGS. M107.00 & M207.00 ARE PROVIDED BY OTHERS. PLEASE SEE DWGS. H201.00-H208.00 FOR DETAILED INFORMATION.
8. ALL MOTORIZED DAMPERS SHALL MATCH THE MOTOR VOLTAGE OR BE THE TYPE THAT IS CAPABLE OF DIRECT WIRING FROM THE FAN MOTOR NO MATTER WHAT THE VOLTAGE OF THE FAN MOTOR. THE MECHANICAL CONTRACTOR SHALL BE RESPONSIBLE FOR THE WIRING OF THIS DAMPER MOTOR FROM THE FAN MOTOR. NO SEPARATE CIRCUIT SHALL BE REQUIRED TO WIRE THE MOTORIZED DAMPER.
9. SPF-1, SPF-2, SPF-3 & SPF-4 SHALL BE UL LISTED FOR POWER VENTS FOR SMOKE CONTROL SYSTEMS.
10. SEE SPECS FOR ADDITIONAL INFORMATION.
11. FAN SHALL HAVE A MOTORIZED DAMPER (EXCEPT KEF-1). ALL MOTORIZED DAMPER FOR EXHAUST FANS SHALL BE PROVIDED BY THE FAN MANUFACTURER AND POWER FEED THE DAMPER MOTOR FROM THE FAN.
12. ALL FANS WITH MOTORS IN EXCESS OF ½ HP LOCATED ON THE ROOF SHALL BE PROVIDED WITH ROOF CURB ISOLATION RAILS BETWEEN THE FAN CURB AND FAN'S CURB CAP. ISOLATORS SHALL PROVIDE A MINIMUM EFFICIENCY OF 90% WITH MAXIMUM DEFLECTION OF 2 INCHES.
13. FANS WITH AN AIR FLOW RATE LESS THAN 300 CFM SHALL HAVE A GRAVITY TYPE DAMPER. FAN WITH AN AIR FLOW RATE 300 CFM AND GREATER SHALL HAVE A MOTORIZED DAMPER. MOTORIZED DAMPER SHALL HAVE THE POWER FROM ELECTRICAL FEED FOR RESPECTIVE FAN. (TYPICAL ALL FANS)

NOTES:
1. ALL SILENCERS SHALL HAVE INERT AND VERMIN-PROOF FIBROUS FILL MATERIAL.
2. ALL SILENCERS SHALL BE CONSTRUCTED OF 18 GA. OR HEAVIER SHEET STEEL.
3. FOR NON BASIS OF DESIGN PRODUCTS PROVIDED, CONTRACTOR IS RESPONSIBLE TO ENSURE THE REQUIRED NOISE CONTROL SOLUTION IS DELIVERED TO MEET SPACE NC CRITERIA.
4. SUBMIT A FABRICATION DRAWING SHOWING THE ACTUAL SHAPE AND DIMENSION OF THE CUSTOM MADE SILENCER THAT WAS APPROVED BY THE SILENCER MANUFACTURER. SILENCER SOUND DATA SHALL BE APPROVED BY THE ACOUSTICAL CONSULTANT BEFORE FABRICATION. FOR ADDITIONAL DETAILS OF THE SILENCERS, REFER TO SPECIFICATION 15891.

APPLICATIONS FOR SERVICE EQUIPMENT PERMITS:

CONTRACTOR SHALL FILE FOR AND OBTAIN SERVICE EQUIPMENT PERMITS FOR ALL EQUIPMENT NOTED WITH ASTERISK (*) IN ACCORDANCE WITH TITLE 28, SECTION MC 105 OF THE NEW YORK CITY BUILDING CODE.

COMPLIANCE WITH ASHRAE 90.1 2013 NOTE:

TO THE BEST OF MY KNOWLEDGE, BELIEF AND PROFESSIONAL JUDGMENT, THESE PLANS AND SPECIFICATIONS ARE IN COMPLIANCE WITH THE ASHRAE 90.1 2013

REFER TO SPECIFICATIONS FOR ADDITIONAL INFORMATION

NOTES:
1. ALL CABINET UNIT HEATERS TO BE PROVIDED WITH ALUMINUM GRILLE, AQUASTAT CONTROL, DISCONNECT SWITCHES, EXTRA SET OF FILTERS, LIMITED ACCESS FASTENERS.
2. HOT WATER CABINET UNIT HEATERS SHALL BE CONTROLLED BY BACnet THERMOSTATS AS PER SPECIFICATION SECTION 15836.
3. PROVIDE COLOR CHART. COLOR TO BE SELECTED BY ARCHITECT.
4. PROVIDE MOTOR STARTER AND DISCONNECT SWITCH WITH THERMAL OVERLOAD.
5. PROVIDE (1) EXTRA THROWAWAY FILTER FOR ALL CUH.

ELECTRICAL BASEBOARD HEATER

UNIT NO.	MODEL	WATTAGE (KW)	VOLTS	PHASE	AMPS	BTU	SIZE LENGTH x HEIGHT x DEPTH	FINISH	ACCESSORIES	WEIGHT (LB)	LOCATION	MANUFACTURER	REMARKS

EBD-C		600	120	1	5	2040	36"x6"x2 1/2"	IVORY	DS	7	REFER TO PLANS		SEE NOTES

NOTES:
1. PROVIDE FIN-TUBE RADIATION ELEMENT SUPPORT BRACKETS, SADDLE, HANGERS, CONTINUOUS BAFFLE AS REQUIRED TO INSTALL UNITS.
2. BTU/FT WAS CALCULATED CONSIDERING BOTH FACTORS IN SCHEDULE ABOVE.
3. PROVIDE WALL-TO-WALL FIN-TUBE RADIATION 14 GAUGE ENCLOSURE, PROVIDE END ENCLOSURE. CONTRACTOR SHALL COORDINATE IN THE FIELD.
4. FTR'S SHALL BE PROVIDED WITH MINIMUM 14 GAUGE ENCLOSURES. ALL ENCLOSURES SHALL BE COORDINATED WITH THE ARCHITECTURAL DRAWINGS.
5. PROVIDE HINGED ACCESS DOORS AT CONTROL VALVE & BALANCING VALVE LOCATIONS.
6. LENGTHS OF EACH ROW OF HEATING ELEMENT ARE SHOWN ON M200 SERIES DRAWINGS.
7. SEE SPECS & DRAWINGS FOR ADDITIONAL INFORMATION.

NOTES:
1. ALL CONTROL AND POWER WIRING BETWEEN INDOOR AND OUTDOOR UNITS TO BE PROVIDED BY THE MECHANICAL CONTRACTOR.
2. ALL AIR CONDITIONING UNITS TO BE PROVIDED WITH WIRED PROGRAMMABLE THERMOSTAT AND LOW AMBIENT CONTROL.
3. TCC TO PROVIDE SPACE TEMPERATURE AND HUMIDITY SENSOR FOR ALARM ONLY.
4. ALL UNITS TO BE PROVIDED WITH CONDENSATE PUMPS.
5. ALL UNITS TO BE PROVIDED WITH TIME–DELAY, FILTER–DRIER, COMPRESSOR SHORT CYCLE PROTECTOR, HIGH AND LOW PRESSURE KIT.
6. ALL UNITS TO BE PROVIDED LOW–AMBIENT CONTROLLER (FLOODED CONDENSER), WINTER START CONTROL, EVAPORATOR FREEZE THERMOSTAT.
7. SEE SPECS AND DRAWINGS FOR MORE INFORMATION.
8. ALL OUTDOOR CONDENSING UNITS SHALL BE PROVIDED WITH A WIND BAFFLE.

NOTES:
1. FOR ALL OTHER AREAS (INCLUDING TRANSFER DUCTS) NOT MENTIONED IN ABOVE SCHEDULE.
2. KITCHEN AREA, SERVING AREA, TOILETS, LOCKER ROOMS DIFFUSERS SHALL BE ALUMINUM CONSTRUCTION WITH CLEAR ALUMINUM ANODIZE FINISH.
3. CONTRACTOR SHALL COORDINATE DIFFUSER'S FRAME TYPE WITH APPROVED CEILING TYPE.
4. GYMNATORIUM, CAFETERIA, LIBRARY, KITCHEN & CORRIDOR DIFFUSERS SHALL BE PROVIDED WITH PATTERN FLAPS FOR THE D DIFFUSERS.
5. CAFERRIA SHALL BE PROVIDED WITH FOUR ADJUSTABLE LINER SLOT DIFFUSERS WITH 1/2" SLOT WIDTH, 2 SLOTS, MODEL SLAD, VERTICAL PATTERN WITH T–BAR PLASTER FRAME.
6. TYPE E (EPL–D & E1–D) DIFFUSERS SHALL BE PROVIDED WITH 4TH CONE.
7. GRILLE LAYOUT IS FOR CONTINUOUS RUN (APPEARANCE), PROVIDE GRILLES WITH CONCEALED KEY–WAYS AND ALIGNMENT STRIPS FOR EXACT ALIGNMENT AND CLEAN, NEAT APPEARANCE.

VAV BOX NOTES:

1. BOXES SHALL BE MANUFACTURED BY ANEMOSTAT AS STANDARD.
2. BOXES SHALL BE DIRECT DIGITAL CONTROL (DDC).
3. DIRECT DIGITAL CONTROL SHALL BE SUPPLIED BY TCC CONTRACTOR.
4. TCC SHALL FURNISH BACNET CONTROLLERS TO THE UNIT MANUFACTURER. ALL UNITS SHALL BE 120 VOLTS. PROVIDE 120 VOLTS/24 VOLTS STEP DOWN TRANSFORMER.
5. ALL MAXIMUM AND MINIMUM CFM CALIBRATION AND BALANCING TO BE DONE BY TCC CONTRACTOR.
6. HVAC CONTRACTOR TO COORDINATE INSTALLATION OF DIRECT DIGITAL CONTROL.
7. CASING SHALL BE INTERNALLY LINED WITH 1" THICK CLOSED CELL INSULATION.
8. FURNISH ALL VAV BOXES WITH 3 FT SOUND TRAPS AND FOR GREATER THAN 1000cfm PROVIDE 5FT VIBRO ACOUSTICS SOUND TRAP (MODEL RFL-MV) ON THE DISCHARGE.
9. ALL VAV BOXES SERVING THE CORRIDOR, LOCKER ROOMS, AND VESTIBULE SHALL BE SET TO CONSTANT VOLUME.
10. ALL VAV BOXES SHALL BE PROVIDED WITH DISCONNECT SWITCH.
11. REFER TO SPECIFICATIONS FOR MORE INFORMATION.

COMPLIANCE WITH ASHRAR 90.1 2013 NOTE:

TO THE BEST OF MY KNOWLEDGE, BELIEF AND PROFESSIONAL JUDGMENT, THESE PLANS AND SPECIFICATIONS ARE IN COMPLIANCE WITH THE ENERGY CONSERVATION CONSTRUCTION CODE OF NEW YORK STATE.

*APPLICATIONS FOR SERVICE EQUIPMENT PERMITS:

CONTRACTOR SHALL FILE FOR AND OBTAIN SERVICE EQUIPMENT PERMITS FOR ALL EQUIPMENT NOTED WITH ASTERISK (*) IN ACCORDANCE WITH TITLE 28, SECTION MC 105 OF THE NEW YORK CITY MECHANICAL CODE.

NOTES:

1. SEE HVAC PIPING PLANS FOR THERMOSTATS, TEMPERATURE SENSORS, HUMIDITY SENSORS, DDC ROUTERS AND DDC POWER PANEL.
2. ALL DUCT TAKE-OFF SHALL BE PROVIDED WITH 45 DEGREE CLINCH WITH COLLAR AND VOLUME DAMPERS AS PER DETAIL ON M501.00.
3. ALL DUCT TEES AND MITERED ELBOWS SHALL BE PROVIDED WITH SPLITTER TEE WITH DIRECTIONAL VANES.
4. DUCT SMOKE DETECTOR MUST BE INSTALLED WITHIN 5 FT OF FIRE SMOKE DAMPER AS SHOWN ON PLAN.
5. PROVIDE YOUNG REGULATOR TYPE VOLUME DAMPER FOR INACCESSIBLE CONCEALED DUCTWORK.
6. PROVIDE ARCHITECTURAL CEILING ACCESS DOOR FOR INACCESSIBLE CONCEALED CEILING MOUNTED EQUIPMENT, FIRE DAMPER, SMOKE DAMPER AND FIRE SMOKE DAMPER. SEE M502.00 FOR DUCT ACCESS DOOR SIZE.
7. ALL LOCKER / SHOWER AND MOP / CAN WASH ROOM EXHAUST DUCTWORK AND GRILLES SHALL BE ALUMINUM. REFER TO SPECICIATIONS FOR FURTHER DETAILS
8. COORDINATE WITH ARCHITECTURAL DRAWINGS FOR CEILING AND WALL ACCESS DOORS FOR EQUIPMENT, VOLUME DAMPERS, FIRE DAMPERS, SD, FSD ETC.
9. PROVIDE 1" DUCT LINER FROM DISCHARGE OF ALL VAV BOXES UP TO ALL OUTLETS

KEYED NOTES:

(1) 20X12 EXHAUST AIR UP F.S.D AT SLAB 2HR RATED FIRE WRAP FOR DUCTWORK WITHIN ENLCOSURE FROM MOTORIZED DAMPER UP TO LOUVER LOCATED ON 2ND LFOOR

(2) INTERLOCK DAMPER OPERATION WITH KEF-4, EF-1 &EF-2.

5. PROVIDE YOUNG REGULATOR TYPE VOLUME DAMPER FOR INACCESSIBLE CONCEALED DUCTWORK.
6. PROVIDE ARCHITECTURAL CEILING ACCESS DOOR FOR INACCESSIBLE CONCEALED CEILING MOUNTED EQUIPMENT, FIRE DAMPER, SMOKE DAMPER AND FIRE SMOKE DAMPER.
7. ALL LOCKER / SHOWER AND MOP / CAN WASH ROOM EXHAUST DUCTWORK AND GRILLES SHALL BE ALUMINUM. REFER TO SPECIFICATIONS FOR FURTHER DETAILS.
8. PROVIDE 1" DUCT LINER FROM DISCHARGE OF ALL VAV BOXES TO ALL OUTLETS
9. PROVIDE REFRIGERANT PIPING FORM AHU-5 AND AHU-6 TO OUT CONDENSING UNITS. PROVIDE MULTI V HR BOXES AS PER SCHEDULE SHEET M003.00.

KEYED NOTES:

1. 8X8 CAN WASH RM. EXHAUST DN (KEF-3). DUCT TO BE CONSTRUCTED OF 18 GA. MIN.
2. 12X12 SHAFT VENT UP. PROVIDE 2HR RATED DUCT WRAP FOR ENTIRE LENGTH OF DUCTWORK.
3. 9'-0"x5'-0" OA INTAKE LOUVER WITH W.M.S.
4. 7'-0"x5'-0" EA IDISCHARGE LOUVER WITH W.M.S.
5. 5'-0"x5'-0" EA IDISCHARGE LOUVER WITH W.M.S.
6. 6'-0"x5'-0" OA INTAKE LOUVER WITH W.M.S.

POWER

SYMBOL	DESCRIPTION
2,4	CONDUIT AND WIRE RUN CONCEALED IN FLOOR, CEILING OR WALL. HASH MARKS DENOTE NUMBER OF WIRES IF MORE THAN TWO ARE REQUIRED. ARROWS DENOTE HOMERUNS OF PARTICULAR CIRCUITS, MINIMUM 2#12 THHN/THWN IN 3/4" CONDUIT. ALL BRANCH CIRCUITS FOR 120V IF GREATER THAN 100 FEET SHALL BE ONE SIZE LARGER MINIMUM, AND FOR 277V IF MORE THAN 200 FEET ONE SIZE LARGER MINIMUM (BOTH TO MEET VOLTAGE DROP REQUIREMENTS) " " DENOTES GROUND CONDUCTOR TO MATCH CIRCUIT WIRES
	CONDUIT , WITH WIRING.
	RISER CONDUIT , WITH WIRING.
J	JUNCTION/SPLICE BOX, SIZE AS REQUIRED. SUBSCRIPT 'F' INDICATES FLOOR MOUNTED.
	WIRE TROUGH/SPLICE BOX. SIZE AS REQUIRED.
PNL#1	"PNL" INDICATES PANEL DESIGNATION AND "1" INDICATES CIRCUIT NUMBER. CIRCUIT WIRE SHALL BE MINIMUM 2#12 THHN/THWN IN 3/4" CONDUIT, U.O.I. ALL COMPUTER CIRCUIT SHALL ALSO BE PROVIDED WITH A SEPARATE NEUTRAL.
	LIGHTING AND POWER PANELBOARD, FLUSH MOUNTED IN WALL WITH COVER INDICATED.
	LIGHTING AND POWER PANELBOARD, SURFACE MOUNTED ON WALL.
ASCP-X	AUTOMATIC SHADE POWER AND CONTROL MODULE. CONTROLS UP TO TEN (10) SHADES. WALL MOUNTED ABOVE FINISH CEILING. 'X' DENOTES THE FLOOR LEVEL.
	GROUND
S	QUAD. THREE WIRE GROUNDED RECEPTACLE, 20A, 125V. (NEMA 5-20R) MOUNTED 18" A.F.F. U.O.I. SUBSCRIPTS "F" INDICATES FURNITURE MOUNTED, "S" INDICATES SURGE SUPPRESSOR, "SW" INDICATES SWITCHED V/A RECEPTACLE RELAY CONTROL PANEL 'IG' INDICATES WITH ISOLATED GROUND. 'GFCI' INDICATES WITH GROUND FAULT INTERRUPTER.
	MOTOR STARTER W/ PUSH BUTTON STATIONS AND H-O-A. NOTED STARTER RATING AS PER HORSEPOWER INDICATED.
? / ? / ?	SWITCH RATING / FUSE SIZE ("U" IF UNFUSED) / POLES — DISCONNECT SWITCH, RATING AND FUSING NOTED. HORSEPOWER RATING AS REQUIRED BY MOTOR LOAD. 'WP' INDICATES WEATHERPROOF NEMA 4X ENCLOSURE, OTHERWISE NEMA-1. SUBSCRIPT "L" INDICATES LOCKABLE TYPE.
	COMBINATION MOTOR STARTER AND DISCONNECT SWITCH.
S	MOTOR. HORSEPOWER INSCRIBED. 'NP' INDICATES NON FUSE 'F' DENOTES FRACTIONAL HORSEPOWER LESS THAN 1/2HP
	GROUND BUS BAR
C	CONTACTOR FOR KITCHEN EQUIPMENT, 120V, 30A.
R	REMOTE CONTROL SWITCH/RELAY RATING AS REQUIRED OR INDICATED
	FUSED SWITCH, RATING AND FUSING INDICATED.
	UNFUSED SWITCH.
M C	CURRENT TRANSFORMER AND METER.
M	MOTORIZED DAMPER (BY MECHANICAL)
CP	CONTROL PANEL (PROVIDED BY OTHERS) 'CP' INCLUDES STARTER AND DISCONNECT
C RC	ASCO REMOTE CONTROL SWITCH
UV-X-X	UNIT VENTILATOR (BY MECHANICAL)
CUH	CABINET UNIT HEATER (BY MECHANICAL)
	ELECTRICAL UNIT HEATER (BY MECHANICAL)
F s	FIRE SMOKE DAMPER (BY MECHANICAL)
F sp	FIRE-SMOKE DAMPER AND ACCESS DOOR INTERLOCKED WITH SMOKE PURGE SYSTEM
S	SMOKE DAMPER (BY MECHANICAL)
S sp	SMOKE DAMPER AND ACCESS DOOR INTERLOCKED WITH SMOKE PURGE SYSTEM
SPD	TRANSIENT VOLTAGE SURGE SUPPRESSION DEVICE

GENERAL NOTES

1. FOR AN EXPLANATION OF ABBREVIATIONS AND SYMBOLS USED ON THESE DRAWINGS, SEE THE ABBREVIATION LIST AND SYMBOLS LIST ON THIS SHEET AND SHEET E001, RESPECTIVELY.
2. THE CONTRACTOR SHALL CHECK THE LOCATION, NUMBER AND SIZE OF ALL CHASES PROVIDED ON THE CONSTRUCTION PLANS AND ARRANGE FOR ANY CHASES REQUIRED FOR CABINET OR BOXES.
3. CONTRACTOR SHALL FIELD VERIFY DIMENSIONS OF FINISHED CONSTRUCTION PRIOR TO FABRICATION AND INSTALLATION OF FIXTURES AND EQUIPMENT.
4. MOUNTING HEIGHTS OF EQUIPMENT AND DEVICES SHALL BE AS INDICATED ON THE SPECIFICATION 16130-(3-04). UTILIZE THE FOLLOWING MOUNTING HEIGHTS UNLESS OTHERWISE NOTED (ALL DIMENSIONS TO CENTERLINE OF BOX):
   - A. RECEPTACLES (WALL MOUNTED) - 18" A.F.F. UOI
   - B. COMMUNICATIONS OUTLETS - SAME HEIGHT AS RECEPTACLES
   - C. LIGHTING SWITCHES AND CONTROLS - 48" A.F.F.
   - D. LIGHTING FIXTURES (AREAS WITHOUT CEILINGS) - 9'-6" A.F.F. UOI.
   - E. PANELBOARDS AND CABINETS - 78" TO TOP OF ENCLOSURE
5. FINAL LOCATION OF LIGHTING FIXTURES, OCCUPANCY/VACANCY SENSOR, DAY-LIGHT SENSOR, SMOKE DETECTORS AND OTHER CEILING MOUNTED ELECTRICAL EQUIPMENT SHALL BE IN ACCORDANCE WITH ARCHITECTURAL REFLECTED CEILING PLANS.
6. WHERE MULTIPLE SWITCHES AND RECEPTACLES ARE INDICATED AT THE SAME LOCATION, THEY SHALL BE MOUNTED BEHIND A COMMON FACEPLATE.
7. WHERE EQUIPMENT, LIGHTING FIXTURES AND WIRING DEVICES ARE SHOWN WITH CIRCUIT NUMBERS ONLY, THE MINIMUM BRANCH CIRCUITING REQUIREMENTS SHALL BE AS FOLLOWS:
   - A. LIGHTING FIXTURES - 2#12 & 1#12G - 3/4" C.
   - B. RECEPTACLES - 2#12 & 1#12G - 3/4" C.
   - C. BRANCH CIRCUIT BREAKERS (120 VOLT) - 1P, 20A
   - D. HOMERUNS TO PANELBOARDS SHALL CONTAIN NO MORE THAN (3) CIRCUITS.
   - E. WHERE LIGHTING SWITCH INDICATIONS ARE NOT SHOWN, SWITCHES SHALL BE CONNECTED TO CONTROL ALL SWITCHED FIXTURES WITHIN THE CORRESPONDING SPACE.
8. WIRE SIZES SHALL BE INCREASED TO COMPENSATE FOR VOLTAGE DROP AS FOLLOWS: 120V AND 208V CIRCUITS LONGER THAN 100' SHALL UTILIZE MIN. #10 AWG.
9. NUMBER SHOWN AT LIGHTING FIXTURES, DEVICES AND EQUIPMENT INDICATES CIRCUIT NUMBER IN PANEL. PROVIDE WIRE AND CONDUIT TO INTERCONNECT THE AFOREMENTIONED AND ASSOCIATED SWITCHES AND CONTROL DEVICES WITH SAME CIRCUIT NUMBERS AND RUN TO PANEL VIA CIRCUIT HOMERUN SHOWN.
10. CONDUIT RUNS SHALL BE NEATLY INSTALLED. WHERE MULTIPLE RUNS FROM THE SAME PANEL ARE MADE, THE RUNS SHALL BE PARALLEL WITH EACH OTHER AND FASTENED WITH A COMMON SUPPORT, SPACED AND SECURED AT THE REQUIRED INTERVALS. BRANCHES SHALL TURN OFF TO THEIR OUTLETS IN AN ORGANIZED MANNER WITHOUT CROSSING EACH OTHER.
11. WIRING IN AIR PLENUM HUNG CEILINGS WHEN INDICATED TO BE INSTALLED WITHOUT CONDUIT OR EMT SHALL BE TEFLON JACKETED.
12. LIGHTING FIXTURES IN ACCESSIBLE CEILINGS SHALL BE FURNISHED WITH FLEXIBLE CONDUIT CONNECTIONS TO SEPARATELY MOUNTED JUNCTION BOXES. ONE JUNCTION BOX SHALL SERVE A MAXIMUM OF FOUR (4) FIXTURES. MAXIMUM LENGTH OF FLEXIBLE CONNECTION SHALL BE 6'-0".
13. PULL AND JUNCTION BOXES SHALL BE SURFACE MOUNTED TYPE IN UNFINISHED AREAS UNLESS OTHERWISE NOTED. LOCATE APPROXIMATELY WHERE INDICATED, ON WALLS, CEILINGS, BEAMS OR SUSPENDED FROM CEILINGS, TO SUIT CONDUIT ENTRANCE, TO AVOID INTERFERENCE WITH EQUIPMENT OF OTHER TRADES AND TO LEAVE COVERS READILY ACCESSIBLE.
14. PULL BOXES WHETHER SIZED OR NOT SHALL BE MODIFIED BY THIS CONTRACTOR TO MEET FIELD CONDITIONS AND CODE REQUIREMENTS. ADDITIONAL PULL BOXES, IF REQUIRED TO SATISFY FIELD CONDITIONS AND CODE REQUIREMENTS, SHALL BE SUPPLIED AND INSTALLED BY THIS CONTRACTOR AT NO EXTRA COST.
15. PANELBOARDS LOCATED ON OTHER THAN MASONRY WALLS SHALL BE MOUNTED WITH MODULAR CHANNEL SUPPORTS SECURED TO THE BUILDING STRUCTURE.
16. CIRCUIT BREAKER HANDLE LOCKS SHALL BE PROVIDED FOR ALL BRANCH CIRCUITS SERVING EMERGENCY LIGHTING, EXIT LIGHTING, FIRE ALARM AND SECURITY EQUIPMENT.
17. ALL BRANCH CIRCUITS SHALL BE CLEARLY MARKED IN THE PANEL AS TO LOCATION AND PURPOSE.
18. GROUND FAULT INTERRUPTER (GFI) RECEPTACLES OR CIRCUIT BREAKERS SHALL BE PROVIDED FOR EQUIPMENT DISPENSING OR OTHERWISE IN CONTACT WITH LIQUIDS.
19. ALL NOTATIONS OF "SCALE" ARE INTENDED AS APPROXIMATIONS. THE CONTRACTOR SHALL BE RESPONSIBLE FOR ASCERTAINING THE EXACT LOCATIONS OF ALL EQUIPMENT AND CHECKING THE REQUIRED CLEARANCES.
20. ALL CIRCUITS CONTAINING GFI OUTLETS, CKT CONTAINING SOLID STATE DIMMERS, CKTS FOR COMPUTERS AND/OR PERIPHERALS AND RELATED EQUIPMENT AND CIRCUITS RECOMMENDED BY THE MANUFACTURERS SHALL HAVE A SEPARATE DEDICATED NEUTRAL.
21. CONTRACTOR SHALL PROVIDE THERMAL OVERLOAD AND PROPER PROTECTIVE DEVICE FOR THE EQUIPMENT AS PER MANUFACTURERS REQUIREMENTS.
22. THIS CONTRACTOR SHALL PROVIDE SEPARATE RACEWAYS FOR CONDUCTORS ON NORMAL AND EMERGENCY CIRCUITS.
23. ELECTRICAL PENETRATIONS (CONDUITS, WIRING ETC.) THOUGHT WALL(S), PARTITION(S), AND/OR. FLOOR CONSTRUCTION SHALL HAVE THE ANNULAR SPACE AROUND PENETRATION SEALED AND/OR FIRE STOPPED WITH UL APPROVED SYSTEM TO MATCH RATING OF ASSEMBLY. PATCH ALL DISTURBED SURFACES TO MATCH ADJACENT SURFACES.
24. THE CONTRACTOR SHALL COORDINATE WITH THE HVAC, P&D AND STRUCTURAL TRADES FOR EXACT LOCATIONS OF MOTORS AND EQUIPMENT, IN ORDER TO AVOID INTERFERENCE.
25. IN THE BOILER ROOM, SYSTEM CONDUITS, SUCH AS FOR LIGHTING AND POWER FEEDERS, LOW VOLTAGE, FIRE SIGNAL, ETC., SHALL NOT BE RUN OVER BOILERS.
26. NO CONDUIT SHALL BE RUN IN ANY FLOOR IN CONTACT WITH THE EARTH UNLESS OTHERWISE DIRECTED ON THE PLAN. IN SUCH AREAS, CONDUIT FOR MOTORS AND STARTERS SHALL BE RUN OVERHEAD, SUPPORTED AS REQUIRED.
27. WHERE RECESSED FIXTURES ARE INDICATED ON THESE PLANS AND WET PLASTER CEILING CONSTRUCTION IS USED, PLASTER FRAMES SHALL BE PROVIDED BY THE ELECTRICAL CONTRACTOR AND INSTALLED BY THE GENERAL CONTRACTOR. WITH OTHER TYPES OF HUNG CEILING CONSTRUCTION, LIGHTING FIXTURES SHALL BE APPROPRIATE TO MEET THE REQUIREMENTS OF THAT CEILING CONSTRUCTION.
28. CONTRACTOR SHALL PROVIDE SEPARATE RACEWAYS FOR CONDUCTORS ON NORMAL AND EMERGENCY CIRCUITS.
29. ANY DEVICE EXCEEDS 16 SQ INCHES INSTALLED IN FIRE RATED WALL SHALL BE PROVIDE WITH 2 HOURS FIRED RATED WRAPPING MATERIAL.

ELECTRICAL CONDUIT INSTALLATION

(IN CONCRETE SLAB AND STEEL DECK CONSTRUCTION)

1. CONTRACTOR SHALL COORDINATE THE LOCATION AND EXTENT OF STEEL DECK AREA WITH ELECTRICAL TRADES.
2. CONDUIT PLACED IN SLAB SHALL BE PLACED ON TOP OF STEEL DECK AND BELOW TOP REINFORCEMENT.
3. CONDUITS SHALL HAVE A MINIMUM COVER OF 1" OF CONCRETE.
4. MAXIMUM SIZE OF CONDUIT IN CONCRETE SLAB AND STEEL DECK CONSTRUCTION SHALL NOT BE LARGER THAN 1" OUTSIDE DIAMETER.
5. PLACEMENT OF CONDUIT IN DECK RIBS SHALL BE AS PER DETAIL.
6. ALL CONDUITS PARALLEL TO DECK OR SLAB SPAN SHALL HAVE A MINIMUM SPACING OF SIX INCHES (6") ON CENTER. ALL ADDITIONAL CONDUITS, IF REQUIRED, ARE TO BE RUN CONCEALED WITHIN THE HUNG CEILING.|
7. ALL CONDUITS PERPENDICULAR TO THE DECK OR SLAB SPAN SHALL HAVE A MINIMUM SPACING OF SIXTEEN INCHES. ALL ADDITIONAL CONDUITS, IF REQUIRED, ARE TO BE RUN CONCEALED WITHIN THE HUNG CEILING.
8. PROVIDE ADDITIONAL W.W.F. OVER CONDUIT OF SAME SIZE AS TOP W.W.F. WITH AN OVERHANG OF NOT LESS THAN 12 INCHES ON BOTH SIDES OF EACH CONDUIT.
9. JUNCTION BOXES MAY BE PLACED IN CONCRETE BUT SHALL NOT EXCEED 6"x 6" x 3-1/2" IN DEPTH AND SHALL BE SEPARATED FROM OTHER JUNCTION BOXES BY NOT LESS THAN 18" OF CONCRETE.

PLAN NOTES:

1. FOR GENERAL NOTES, SYMBOL LIST, DRAWING LIST AND ABBREVIATIONS REFER TO DWGS E001
2. FOR EXACT LOCATION AND MOUNTING HEIGHTS FOR PLUMBING AND MECHANICAL EQUIPMENT AND DEVICES REFER TO PLUMBING AND MECHANICAL DWGS.
3. ALL CONDUIT PENETRATIONS THROUGH FIRE RATED PARTITIONS ARE TO BE PROVIDED WITH FIRE STOP SEALS AS REQUIRED BY CODE TO MAINTAIN FIRE RATING OF PARTITIONS.
4. UNLESS OTHERWISE NOTED ON FURNITURE AND ELECTRICAL DRAWINGS, MOUNTING HEIGHT OF OUTLETS AND EQUIPMENT SHALL BE AS INDICATED ON SYMBOL LIST & SPECIFICATIONS.
5. ALL POWER CIRCUITS SHALL BE PROVIDED WITH THEIR OWN SEPARATE NEUTRAL.
6. FSD DAMPERS ON THIS FLOOR SHALL BE WIRED TO PANEL 'EPP-C' CKT #15. PROVIDE ADDITIONAL CKTS AS REQUIRED.
7. FOR COMPUTER OUTLETS CIRCUITING (WIRING) REFER TO "RECEPTACLES & DATA LAYOUT" DETAIL NO. 4 IN DWG E707.
8. FINAL COLOR SELECTIONS FOR EQUIPMENT & DEVICES SHALL BE BY ARCHITECT.
9. ALL GROUNDING SHALL BE AS PER CODE AND SPECIFICATION SECTION 16450.
10. ALL SPECIFIED HVAC EQUIPMENT (ALL ELECTRIC UNIT HEATER, ELECTRIC WATER UNIT HEATER, ELECTRIC WATER CABINET UNIT HEATER: EUH, WUH, WCUH & ETC.) SHALL BE PROVIDED WITH DISCONNECT SWITCHES (BUILT-IN OR SEPARATE). COORDINATE WITH MECHANICAL CONTRACTOR AND DWGS.
11. ALL PENETRATIONS TO THE BUILDING FOUNDATION WALLS SHALL BE MADE WITH WATERTIGHT SEAL.
12. INTERACTIVE WHITEBOARD AND RECEPTACLE/DATA RACEWAY CIRCUITS TO BE POWERED THROUGH THE LOAD CONTROL PANEL "CP-C" LOCATED IN THE ELECTRICAL ROOM. REFER TO CONTROL PANELS SCHEDULE DRAWING E508.00.
13. POWER TO THE SPLIT TYPE AC SYSTEM INDOOR UNIT SHALL BE FED FROM THE CORRESPONDING OUTDOOR UNIT. REFER TO THE WIRING DIAGRAM DETAIL NO. 5 IN DRAWING E704.00.
14. PROVIDE CIRCUIT AND CONNECT ALL PLUMBING FIXTURES ON THIS FLOOR TO PANEL 'PP-C' CKTS AS SHOWN ON THE DWG.
15. ALL OUTDOOR DEVICES INCLUDING BUT NOT LIMITED TO SWITCHES, OUTLETS AND DISCONNECT SWITCHES FOR EXTERIOR UNITS HAS TO BE WEATHER PROOF AND SHALL BE INSTALLED PROPERLY WITH WEATHER PROOF ACCESSORIES.
16. LOCATION OF WALL ART. NO M/E/P FIXTURES, DEVICES OR OUTLETS SHALL BE LOCATED IN THIS AREA WITHOUT APPROVAL FROM THE PUBLIC ARTS FOR PUBLIC SCHOOLS (PAPS) REPRESENTATIVE AND ARCHITECT.
17. ALL RECEPTACLES LOCATED IN PRE-KINDERGARDEN, KINDERGARDEN, AND D75 CLASSROOMS SHALL BE TAMPER PROOF "K" TYPE.
18. GENERATOR MAINTENANCE RECEPTACLES SHALL BE POWERED BY CIRCUIT ON PANEL PP-GEN LOCATED INSIDE GENRATOR ENCLOSURE. SEE PANEL SCHEDULE ON DWG E605.
19. ALL WIRING AND CONDUIT ARE ASSUMED TO BE #12AWG & 3/4" CONDUIT U.O.N. ON PLANS/PANEL SCHEDULE.
20. FOLLOWING MOUNTING HEIGHTS UNLESS OTHERWISE NOTED (ALL DIMENSIONS TO CENTERLINE OF BOX):
    - A. RECEPTACLES (WALL MOUNTED) - 18" A.F.F. U.O.N.
    - B. RECEPTACLES AT FIN-TUBE WALL - 36" A.F.F. U.O.N.
    - C. RECEPTACLES FOR INTERACTIVE WHITEBOARD - 42" A.F.F. U.O.N. (INSTALLED ON THE LEFT SIDE OF BOARD).
    - D. RECEPTACLES ON COUNTER WALL - 48" A.F.F. U.O.N.

14. PROVIDE CIRCUIT AND CONNECT ALL PLUMBING FIXTURES ON THIS FLOOR TO PANEL 'PP-2' CKTS AS SHOWN ON THE DWG.
15. ALL OUTDOOR DEVICES INCLUDING BUT NOT LIMITED TO SWITCHES, OUTLETS AND DISCONNECT SWITCHES FOR EXTERIOR UNITS HAS TO BE WEATHER PROOF AND SHALL BE INSTALLED PROPERLY WITH WEATHER PROOF ACCESSORIES.
16. LOCATION OF WALL ART. NO M/E/P FIXTURES, DEVICES OR OUTLETS SHALL BE LOCATED IN THIS AREA WITHOUT APPROVAL FROM THE PUBLIC ARTS FOR PUBLIC SCHOOLS (PAPS) REPRESENTATIVE AND ARCHITECT.
17. ALL RECEPTACLES LOCATED IN PRE-KINDERGARDEN, KINDERGARDEN, AND D75 CLASSROOMS SHALL BE TAMPER PROOF "K" TYPE.
18. GENERATOR MAINTENANCE RECEPTACLES SHALL BE POWERED BY CIRCUIT ON PANEL PP-GEN LOCATED INSIDE GENRATOR ENCLOSURE. SEE PANEL SCHEDULE ON DWG E605.
19. ALL WIRING AND CONDUIT ARE ASSUMED TO BE #12AWG & 3/4" CONDUIT U.O.N. ON PLANS/PANEL SCHEDULE.
20. FOLLOWING MOUNTING HEIGHTS UNLESS OTHERWISE NOTED (ALL DIMENSIONS TO CENTERLINE OF BOX):
    - A. RECEPTACLES (WALL MOUNTED) - 18" A.F.F. U.O.N.
    - B. RECEPTACLES AT FIN-TUBE WALL - 36" A.F.F. U.O.N.
    - C. RECEPTACLES FOR INTERACTIVE WHITEBOARD - 42" A.F.F. U.O.N. (INSTALLED ON THE LEFT SIDE OF BOARD)
    - D. RECEPTACLES ON COUNTER WALL - 48" A.F.F. U.O.N.

PLAN NOTES:

1. FOR GENERAL NOTES, SYMBOL LIST, DRAWING LIST AND ABBREVIATIONS REFER TO DWGS E001
2. FOR EXACT LOCATION AND MOUNTING HEIGHTS FOR PLUMBING AND MECHANICAL EQUIPMENT AND DEVICES REFER TO PLUMBING AND MECHANICAL DWGS.
3. ALL CONDUIT PENETRATIONS THROUGH FIRE RATED PARTITIONS ARE TO BE PROVIDED WITH FIRE STOP SEALS AS REQUIRED BY CODE TO MAINTAIN FIRE RATING OF PARTITIONS.
4. UNLESS OTHERWISE NOTED ON FURNITURE AND ELECTRICAL DRAWINGS, MOUNTING HEIGHT OF OUTLETS AND EQUIPMENT SHALL BE AS INDICATED ON SYMBOL LIST & SPECIFICATIONS.
5. ALL POWER CIRCUITS SHALL BE PROVIDED WITH THEIR OWN SEPARATE NEUTRAL.
6. FSD DAMPERS ON THIS FLOOR SHALL BE WIRED TO PANEL 'EPP-3' CKT #15. PROVIDE ADDITIONAL CKTS AS REQUIRED.
7. FOR COMPUTER OUTLETS CIRCUITING (WIRING) REFER TO "RECEPTACLES & DATA LAYOUT" DETAIL NO. 4 IN DWG E707.
8. FINAL COLOR SELECTIONS FOR EQUIPMENT & DEVICES SHALL BE BY ARCHITECT.
9. ALL GROUNDING SHALL BE AS PER CODE AND SPECIFICATION SECTION 16450.
10. ALL SPECIFIED HVAC EQUIPMENT (ALL ELECTRIC UNIT HEATER, ELECTRIC WATER UNIT HEATER, ELECTRIC WATER CABINET UNIT HEATER: EUH, WUH, WCUH & ETC.) SHALL BE PROVIDED WITH DISCONNECT SWITCHES (BUILT-IN OR SEPARATE). COORDINATE WITH MECHANICAL CONTRACTOR AND DWGS.
11. ALL PENETRATIONS TO THE BUILDING FOUNDATION WALLS SHALL BE MADE WITH WATERTIGHT SEAL.
12. INTERACTIVE WHITEBOARD AND RECEPTACLE/DATA RACEWAY CIRCUITS TO BE POWERED THROUGH THE LOAD CONTROL PANEL "CP-3" LOCATED IN THE ELECTRICAL ROOM. REFER TO CONTROL PANELS SCHEDULE DRAWING E508.00.
13. POWER TO THE SPLIT TYPE AC SYSTEM INDOOR UNIT SHALL BE FED FROM THE CORRESPONDING OUTDOOR UNIT. REFER TO THE WIRING DIAGRAM DETAIL NO. 5 IN DRAWING E704.00.
14. PROVIDE CIRCUIT AND CONNECT ALL PLUMBING FIXTURES ON THIS FLOOR TO PANEL 'PP-2' CKTS AS SHOWN ON THE DWG.
15. ALL OUTDOOR DEVICES INCLUDING BUT NOT LIMITED TO SWITCHES, OUTLETS AND DISCONNECT SWITCHES FOR EXTERIOR UNITS HAS TO BE WEATHER PROOF AND SHALL BE INSTALLED PROPERLY WITH WEATHER PROOF ACCESSORIES.
16. LOCATION OF WALL ART. NO M/E/P FIXTURES, DEVICES OR OUTLETS SHALL BE LOCATED IN THIS AREA WITHOUT APPROVAL FROM THE PUBLIC ARTS FOR PUBLIC SCHOOLS (PAPS) REPRESENTATIVE AND ARCHITECT.
17. ALL RECEPTACLES LOCATED IN PRE-KINDERGARDEN, KINDERGARDEN, AND D75 CLASSROOMS SHALL BE TAMPER PROOF "K" TYPE.
18. GENERATOR MAINTENANCE RECEPTACLES SHALL BE POWERED BY CIRCUIT ON PANEL PP-GEN LOCATED INSIDE GENRATOR ENCLOSURE. SEE PANEL SCHEDULE ON DWG E605.
19. ALL WIRING AND CONDUIT ARE ASSUMED TO BE #12AWG & 3/4" CONDUIT U.O.N. ON PLANS/PANEL SCHEDULE.
20. FOLLOWING MOUNTING HEIGHTS UNLESS OTHERWISE NOTED (ALL DIMENSIONS TO CENTERLINE OF BOX):
    - A. RECEPTACLES (WALL MOUNTED) - 18" A.F.F. U.O.N.
    - B. RECEPTACLES AT FIN-TUBE WALL - 36" A.F.F. U.O.N.
    - C. RECEPTACLES FOR INTERACTIVE WHITEBOARD - 42" A.F.F. U.O.N. (INSTALLED ON THE LEFT SIDE OF BOARD).
    - D. RECEPTACLES ON COUNTER WALL - 48" A.F.F. U.O.N.

FIRE DETECTION & ALARM SYSTEM

SYMBOL	DESCRIPTION
FACP	FIRE ALARM SYSTEM CONTROL PANEL. WITH INTEGRATED DACT & INTEGRATED POST FIRE PURGE PANEL
FASP	FIRE SYSTEM SMOKE PURGE CONTROL PANEL
DACT	DIGITAL ALARM COMMUNICATOR TRANSMITTER
FARA	FIRE ALARM REMOTE ANNUNCIATOR
FAPR	FIRE ALARM PRINTER
F	FIRE SYSTEM PULL STATION WITH FALSE ALARM STOPPER, FLUSH MTD AT 4'-0" AFF.
30 G	FIRE SIGNAL STROBE MTD. AT 8'-0"AFF TO DEVICE BOTTOM OR 6" MIN. BELOW CEILING SUBSCRIPT 'G' DENOTES WITH GUARD. NUMERICAL DENOTES CANDELA RATING.
30 G	FIRE SIGNAL HORN/STROBE, FLUSH MTD. AT 8'-0"AFF TO DEVICE BOTTOM OR 6" MIN. BELOW CEILING. SUBSCRIPT 'G' DENOTES WITH GUARD NUMERICAL DENOTES CANDELA RATING IN DB.
F 30 G	FIRE ALARM PULL STATION AND HORN/STROBE WITH FALSE ALARM STOPPER ASSEMBLY MOUNTED 8'-0" AFF TO DEVICE BOTTOM OR 6" MIN. BELOW CEILING SUBSCRIPT 'G' DENOTES WITH GUARD NUMERICAL DENOTES CANDELA RATING IN DB.
LSS	GYMATORIUM LOCAL SOUND SYSTEM CABINET.
DB	GYMATORIUM DIMMER PANEL BOARD.
FDS	LOCKABLE FUSE DISCONNECT SWITCH WITH SOLID NEUTRAL BAR
FCO	FUSE CUTOUT PANEL.
ATS	AUTOMATIC TRANSFER SWITCH (ATS)
S EX	SMOKE DETECTOR. 'EX' DENOTES EXPLOSION PROOF,' ER' INDICATES ELEVATOR RECALL
H	HEAT DETECTOR (194 F FIXED TEMPERATURE)
SD	SMOKE DETECTOR DUCT MOUNTED
C	CARBON MONOXIDE SENSOR
F S	MOTORIZED FIRE AND SMOKE DAMPER (BY HVAC)
F SP	MOTORIZED FIRE SMOKE PURGE DAMPER (BY HVAC)
S SP	MOTORIZED SMOKE PURGE DAMPER (BY HVAC)
S	MOTORIZED SMOKE DAMPER (BY HVAC)
ER	ELEVATOR RECALL
TS	FIRE ALARM TAMPER SWITCH (BY PLUMBING).
WF	FIRE ALARM FLOW SWITCH (BY PLUMBING).
MM	INDIVIDUALLY ADDRESSABLE MONITOR MODULE
CM	CONTACT INTERFACE MODULE
R	RELAY MODULE
BP	BOOSTER POWER SUPPLY
SH	ELEVATOR SHAFT VENTILATION LOUVER

SPECIAL INSPECTION NOTES

SPECIAL INSPECTIONS REQUIRED IN ACCORDANCE WITH CHAPTER 17 AND THE APPLICABLE SECTIONS OF THE 2014 NYC CONSTRUCTION CODE ARE LISTED IN THE FOLLOWING TABLES. THE CONTRACTOR MUST NOTIFY THE ARCHITECT OR ENGINEER FOR SPECIAL INSPECTIONS AT LEAST 72 HOURS BEFORE THE SPECIFIC WORK COMMENCES.

THE "AUTHORITY" SHALL BE RESPONSIBLE FOR THE FOLLOWING SPECIAL INSPECTIONS:
THE "CONTRACTOR" SHALL BE RESPONSIBLE FOR THE FOLLOWING SPECIAL INSPECTIONS:

- FIRE-RESISTANT PENETRATION AND JOINTS - BC 1704.27

REQUIRED INSPECTIONS AND TESTS OF MATERIALS DESIGNATED FOR "SPECIAL INSPECTION" BY THE CONTRACTOR SHALL BE MADE UNDER THE DIRECT SUPERVISION OF A LICENSED ARCHITECT OR ENGINEER RETAINED BY OR ON THE BEHALF OF THE CONTRACTOR WHO SHALL BE ACCEPTABLE TO THE ARCHITECT OR ENGINEER WHO SUPERVISED THE PREPARATION OF THE PLANS.

FIRE ALARM SYSTEM GENERAL NOTES:

1. THE FIRE ALARM SYSTEM SHOWN ON THE RISER DIAGRAM, FLOOR PLANS AND SPECIFICATIONS IS ENTIRELY NEW. UPON COMPLETION OF THIS WORK AND OF ALL TESTS AND AFTER OBTAINING THE AUTHORITY'S AND THE FIRE DEPARTMENT'S APPROVALS, THE NEW FIRE ALARM SYSTEM SHALL BECOME IN USE.
2. ALL CONDUITS AND CONTROL PANELS SHALL BE GROUNDED TO THE WATER MAIN WITH A MINIMUM #8 CONDUCTOR.
3. SMOKE PURGE DAMPERS SHALL BE ZONED PER FLOOR.
4. VISUAL DEVICES SHALL NOT HAVE ANY APPURTENANCES WITHIN 5 FEET RADIUS.
5. PROVIDE FIRE STOP SEAL AT ALL PENETRATIONS OF FIRE RATED PARTITIONS.
6. ALL COMPONENTS SHOWN ON RISER DIAGRAMS, BUT NOT ON THE PLAN OR VICE VERSA, SHALL BE INCLUDED AS IF SHOWN ON BOTH.
7. THE INSPECTION, TESTING, AND MAINTENANCE OF SYSTEMS, THEIR INITIATING DEVICES, AND NOTIFICATION APPLIANCES SHALL COMPLY WITH THE REQUIREMENTS OF CHAPTER 14 NFPA CODE.
8. ALL MATERIAL/DEVICES SHALL BE IN COMPLIANCE WITH F.D STANDARDS AND UL LISTED.
9. CO DETECTION SHALL BE LISTED IN ACCORDANCE WITH UL 2075.
10. CONTRACTOR TO PROVIDE BATTERY CALCULATION SHOWING 20 PERCENT SAFETY MARGIN TO THE CALCULATED AMP-RATING.
11. ALL EQUIPMENT AND COMPONENTS SHALL BE LISTED FOR THE PURPOSE FOR WHICH THEY ARE INSTALLED.

PLAN NOTES:

1. FOR GENERAL NOTES, SYMBOL LIST, ABBREVIATIONS AND FIRE ALARM SYSTEM DRAWING LIST REFER TO DWG FA001.00
2. FOR EXACT LOCATION AND QUANTITIES OF MECHANICAL AND PLUMBING EQUIPMENT AND DEVICES REFER TO MECHANICAL AND PLUMBING DWGS.
3. ALL CONDUIT PENETRATIONS THROUGH FIRE RATED PARTITIONS ARE TO BE PROVIDED WITH FIRE STOP SEALS AS REQUIRED BY CODE TO MAINTAIN FIRE RATING OF PARTITIONS.
4. UNLESS OTHERWISE NOTED ON DRAWING MOUNTING HEIGHTS OUTLETS AND EQUIPMENT SHALL BE AS INDICATED ON SYMBOL LIST & SPECIFICATIONS.
5. FOR FIRE SMOKE DAMPER CIRCUITS REFER TO FLOOR POWER PLAN DWGS.
6. WALL MOUNTED HORNS AND VISUAL FIRE ALARMS (STROBES) SHALL BE MOUNTED SUCH THAT THE ENTIRE STROBE LENS IS LOCATED NOT GREATER THAN 96" ABOVE THE FINISHED FLOOR OR 6" BELOW THE CEILING, WHICHEVER IS LOWER.
7. FIRE ALARM PULL STATIONS SHALL BE MOUNTED MIN 3'-6" AND MAX 4'-0" FROM THE FLOOR LEVEL TO THE ACTIVATING HANDLE.
8. ACCESS SHALL BE PROVIDE TO EACH DETECTOR FOR PERIODIC INSPECTION, MAINTENANCE AND TESTING AS PER SECTION 907.12 OF N.Y.C. BUILDING CODE.
9. ARTWORK: NO M/E/P, FIXTURES, DEVICES OR OUTLETS MAY BE LOCATED IN THIS AREA WITHOUT APPROVAL FROM PUBLIC ART FOR PUBLIC SCHOOLS (PAPS) AND ARCHITECT.
10. SEE TYPICAL DETAILS #10 ON DRAWING E710.00 FOR APPROXIMATE LOCATION OF CO DETECTOR INSTALLED INSIDE GENERATOR ENCLOSURE AND OTHER COMPONENTS TO BE TIED INTO FIRE ALARM SYSTEM.
11. FIRE ALARM AUTOMATIC TRANSFER SWITCH (FA-ATS) IS LOCATED IN A 2-HR RATED ROOM.

NOTES:
1. ALL AHU FAN MOTORS SHALL COMPLY WITH THE ASHRAE 90.1 2013 EFFICIENCIES REQUIREMENT.
2. COILS SHALL HAVE COPPER TUBES WITH ALUMINUM FINS (MAX. 14 FINS/IN.)
3. UNITS SHALL BE PROVIDED WITH 2" PLEATED PRE FILTER MERV 8 AND 12" MERV–13 PLEATED FINAL FILTER FOR SUPPLY AIR STREAM AND 2" PLEATED PRE FILTER MERV 8 UPSTREAM OF THE ENERGY WHEEL.
4. PROVIDE SEAMLESS STAINLESS STEEL DRAIN PANS.
5. SPECS AND DRAWINGS FOR ADDITIONAL INFORMATION.
6. UNITS SHALL BE PROVIDED WITH SINGLE POINT POWER SUPPLY CONNECTION WITH UNIT MOUNTED MAIN ,SAFETY DISCONNECT SWITCH, CONTROL PANEL, GFI RECEPTACLES AND LAMPS. DISCONNECT SWITCH MAX. HEIGHT IS 79" TO ITS CENTER LINE.
7. ALL AHUS (SUPPLY & EXHAUST SECTIONS) SHALL BE PROVIDED WITH SMOKE DETECTORS
8. SMOKE DETECTORS FOR SUPPLY AND EXHAUST SECTIONS SHALL BE FURNISHED BY ELECTRICAL CONTRACTOR FOR FACTORY INSTALLATION AND WIRING.
9. ALL AHU FANS (SUPPLY & RETURN) SHALL BE PROVIDED WITH VARIABLE FREQUENCY DRIVE.
10. ACOUSTICAL PERFORMANCE FOR ALL THE UNITS SHALL BE AS INDICATED IN SPECIFICATION #15852 & 15935
11. OVERALL DIMENSIONS DO NOT INCLUDE OA INLET & SPILL AIR HOODS.
12. ALL TOTAL STATIC PRESSURES SHALL INCLUDE DX COIL, HOT GAS REHEAT COIL & DIRTY FILTER (ALL FILTERS) ALLOWANCES.
13. MANUFACTURER SHALL PROVIDE AHUs WITH KNOCK–OUTS AT BOTTOM OF UNITS TO ALLOW FOR POWER FEED FROM THE BOTTOM.
14. PROVIDE SMOKE DAMPERS FOR SUPPLY AND RETURN SECTIONS OF AHU–1, AHU–2 & AHU–3
15. PROVIDE VIBRATION ISOLATORS ON THE EXTERIOR OF ALL UNITS.
16. PROVIDE RUBBER ISOLATORS FOR ALL FANS AND COMPRESSORS.
17. REFRIGERANT SHALL BE 410A.
18. UNITS SHALL BE PROVIDED WITH OEM CONTROLS.

NOTES:
1. ALL ROOF MOUNTED FANS TO BE PROVIDED WITH 24" HEIGHT PREFABRICATED ROOF CURB AND 12" HIGH EXTENSION CURB WITH GASKETED ACCESS DOOR.
2. KEF–1 SHALL BE "UL" LISTED FOR GREASE REMOVAL AND PROVIDED WITH GREASE TROUGH, HEAVY DUTY REGREASABLE BEARINGS IN CAST IRON PILLOWBLOCK HOUSINGS.
3. ALL INLINE FANS SHALL BE PROVIDED WITH BELT GUARD, INLET GUARD, VIBRATION ISOLATORS.
4. KEF–2 SHALL RUN WHEN AHU–4 IS RUNNING AND WHILE KEF–1 IS OFF.
5. ALL FANS SHALL BE PROVIDED WITH DISCONNECT SWITCH.
6. FANS SHALL BE PROVIDED WITH HIGH EFFICIENCY MOTOR THAT MEET THE REQUIREMENTS OF THE 2016 NYCECC SECTION C403.4.4.4 AND ASHRAE 90.1–2013. FAN MOTORS LESS THAN 1 HP MUST BE AT LEAST 70% EFFICIENT.
7. FANS SF–1 & SF–2 SHOWN ON DWGS. M107.00 & M207.00 ARE PROVIDED BY OTHERS. PLEASE SEE DWGS. H201.00–H208.00 FOR DETAILED INFORMATION.
8. ALL MOTORIZED DAMPERS SHALL MATCH THE MOTOR VOLTAGE OR BE THE TYPE THAT IS CAPABLE OF DIRECT WIRING FROM THE FAN MOTOR NO MATTER WHAT THE VOLTAGE OF THE FAN MOTOR. THE MECHANICAL CONTRACTOR SHALL BE RESPONSIBLE FOR THE WIRING OF THIS DAMPER MOTOR FROM THE FAN MOTOR. NO SEPARATE CIRCUIT SHALL BE REQUIRED TO WIRE THE MOTORIZED DAMPER.
9. SPF–1, SPF–2, SPF–3 & SPF–4 SHALL BE UL LISTED FOR POWER VENTS FOR SMOKE CONTROL SYSTEMS.
10. SEE SPECS FOR ADDITIONAL INFORMATION.
11. FAN SHALL HAVE A MOTORIZED DAMPER (EXCEPT KEF–1). ALL MOTORIZED DAMPER FOR EXHAUST FANS SHALL BE PROVIDED BY THE FAN MANUFACTURER AND POWER FEED THE DAMPER MOTOR FROM THE FAN.
12. ALL FANS WITH MOTORS IN EXCESS OF ½ HP LOCATED ON THE ROOF SHALL BE PROVIDED WITH ROOF CURB ISOLATION RAILS BETWEEN THE FAN CURB AND FAN'S CURB CAP. ISOLATORS SHALL PROVIDE A MINIMUM EFFICIENCY OF 90% WITH MAXIMUM DEFLECTION OF 2 INCHES.
13. FANS WITH AN AIR FLOW RATE LESS THAN 300 CFM SHALL HAVE A GRAVITY TYPE DAMPER. FAN WITH AN AIR FLOW RATE 300 CFM AND GREATER SHALL HAVE A MOTORIZED DAMPER. MOTORIZED DAMPER SHALL HAVE THE POWER FROM ELECTRICAL FEED FOR RESPECTIVE FAN. (TYPICAL ALL FANS)

NOTES:
1. ALL SILENCERS SHALL HAVE INERT AND VERMIN–PROOF FIBROUS FILL MATERIAL.
2. ALL SILENCERS SHALL BE CONSTRUCTED OF 18 GA. OR HEAVIER SHEET STEEL.
3. FOR NON BASIS OF DESIGN PRODUCTS PROVIDED, CONTRACTOR IS RESPONSIBLE TO ENSURE THE REQUIRED NOISE CONTROL SOLUTION IS DELIVERED TO MEET SPACE NC CRITERIA.
4. SUBMIT A FABRICATION DRAWING SHOWING THE ACTUAL SHAPE AND DIMENSION OF THE CUSTOM MADE SILENCER THAT WAS APPROVED BY THE SILENCER MANUFACTURER. SILENCER SOUND DATA SHALL BE APPROVED BY THE ACOUSTICAL CONSULTANT BEFORE FABRICATION. FOR ADDITIONAL DETAILS OF THE SILENCERS, REFER TO SPECIFICATION 15891.

APPLICATIONS FOR SERVICE EQUIPMENT PERMITS:

CONTRACTOR SHALL FILE FOR AND OBTAIN SERVICE EQUIPMENT PERMITS FOR ALL EQUIPMENT NOTED WITH ASTERISK (*) IN ACCORDANCE WITH TITLE 28, SECTION MC 105 OF THE NEW YORK CITY BUILDING CODE.

COMPLIANCE WITH ASHRAE 90.1 2013 NOTE:

TO THE BEST OF MY KNOWLEDGE, BELIEF AND PROFESSIONAL JUDGMENT, THESE PLANS AND SPECIFICATIONS ARE IN COMPLIANCE WITH THE ASHRAE 90.1 2013

REFER TO SPECIFICATIONS FOR ADDITIONAL INFORMATION

NOTES:
1. ALL CABINET UNIT HEATERS TO BE PROVIDED WITH ALUMINUM GRILLE, AQUASTAT CONTROL, DISCONNECT SWITCHES, EXTRA SET OF FILTERS, LIMITED ACCESS FASTENERS.
2. HOT WATER CABINET UNIT HEATERS SHALL BE CONTROLLED BY BACnet THERMOSTATS AS PER SPECIFICATION SECTION 15836.
3. PROVIDE COLOR CHART. COLOR TO BE SELECTED BY ARCHITECT.
4. PROVIDE MOTOR STARTER AND DISCONNECT SWITCH WITH THERMAL OVERLOAD.
5. PROVIDE (1) EXTRA THROWAWAY FILTER FOR ALL CUH.

VAV BOX NOTES:

1. BOXES SHALL BE MANUFACTURED BY ANEMOSTAT AS STANDARD.
2. BOXES SHALL BE DIRECT DIGITAL CONTROL (DDC).
3. DIRECT DIGITAL CONTROL SHALL BE SUPPLIED BY TCC CONTRACTOR.
4. TCC SHALL FURNISH BACNET CONTROLLERS TO THE UNIT MANUFACTURER. ALL UNITS SHALL BE 120 VOLTS. PROVIDE 120 VOLTS/24 VOLTS STEP DOWN TRANSFORMER.
5. ALL MAXIMUM AND MINIMUM CFM CALIBRATION AND BALANCING TO BE DONE BY TCC CONTRACTOR.
6. HVAC CONTRACTOR TO COORDINATE INSTALLATION OF DIRECT DIGITAL CONTROL.
7. CASING SHALL BE INTERNALLY LINED WITH 1" THICK CLOSED CELL INSULATION.
8. FURNISH ALL VAV BOXES WITH 3 FT SOUND TRAPS AND FOR GREATER THAN 1000cfm PROVIDE 5FT VIBRO ACOUSTICS SOUND TRAP (MODEL RFL-MV) ON THE DISCHARGE.
9. ALL VAV BOXES SERVING THE CORRIDOR, LOCKER ROOMS, AND VESTIBULE SHALL BE SET TO CONSTANT VOLUME.
10. ALL VAV BOXES SHALL BE PROVIDED WITH DISCONNECT SWITCH.
11. REFER TO SPECIFICATIONS FOR MORE INFORMATION.

COMPLIANCE WITH ASHRAR 90.1 2013 NOTE:

TO THE BEST OF MY KNOWLEDGE, BELIEF AND PROFESSIONAL JUDGMENT, THESE PLANS AND SPECIFICATIONS ARE IN COMPLIANCE WITH THE ENERGY CONSERVATION CONSTRUCTION CODE OF NEW YORK STATE.

*APPLICATIONS FOR SERVICE EQUIPMENT PERMITS:

CONTRACTOR SHALL FILE FOR AND OBTAIN SERVICE EQUIPMENT PERMITS FOR ALL EQUIPMENT NOTED WITH ASTERISK (*) IN ACCORDANCE WITH TITLE 28, SECTION MC 105 OF THE NEW YORK CITY MECHANICAL CODE.

NOTES:

1. SYSTEM SHALL BE PROVIDED WITH I – TOUCH MANAGER CONTROLLER WITH WEB BASED SOFTWARE FOR DISPLAYING UP TO 8 DIII – NET SYSTEMS WITH 128 INDOOR UNITS PER SYSTEM.
2. MANUFACTURERS SUBMITTAL MUST INCLUDE REFRIGERANT PIPING DIAGRAM WITH PIPE DIAMETERS, LENGTHS, AND REFRIGERANT VOLUME.
3. SUBSTITUTE MANUFACTURER SHALL BE RESPONSIBLE FOR ADDITIONAL PIPING AND REFRIGERANT.
4. CONTRACTOR TO VERIFY PIPING DIMENSIONS.
5. INSTALLING CONTRACTOR MUST HAVE SUCCESSFULLY COMPLETED MANUFACTURERS CERTIFIED INSTALLATION CLASS WITHIN PAST 36 MONTHS.
6. CONTRACTOR TO FURNISH AND INSTALL INSULATION ON REFRIGERANT PIPING.
7. MANUFACTURERS REPRESENTATIVE MUST HAVE LOCAL STOCK OF PARTS AND FACTORY CERTIFIED TECHNICIAN ON STAFF.
8. MANUFACTURERS REPRESENTATIVE SHALL PROVIDE PROOF OF ONGOING INSTALLATION TRAINING AT THEIR LOCAL FACILITY FOR AT LEAST THE PAST 5 YEARS.
9. MANUFACTURERS REPRESENTATIVE SHALL PROVIDE PROOF OF CONTINUOUS SALES AND SUPPORT OF THEIR PRODUCTS FOR AT LEAST 15 YEARS.
10. MECHANICAL CONTRACTOR SHALL BE RESPONSIBLE FOR ALL DIRECT COSTS AND OPERATING COSTS INCREASES FOR 20 YEARS ASSOCIATED WITH ANY DEVIATIONS RESULTING FROM CHANGES IN DESIGN.
11. CONDENSING UNIT SHALL PROVIDE AUTO CHARGING AND INDOOR UNIT AUTO ADDRESSING CAPABILITY.
12. MANUFACTURER MUST PROVIDE 10 YEARS PARTS WARRANTY ON ALL FCUS, CONDENSING UNITS, MODE CHANGEOVER DEVICES AND ZONE CONTROLS. WARRANTY CONDITIONS MUST BE CLARIFIED DURING SUBMITTAL PHASE.
13. ALL AIR CONDITIONING UNITS TO BE PROVIDED WITH WIRED PROGRAMMABLE THERMOSTAT AND LOW AMBIENT CONTROL.
14. CONDENSER SHALL BE PROVIDED WITH LOW AMBIENT BAFFLE.

NOTES:

1. PROVIDE MAINTENANCE WITH SERVICE ACCESS FROM BELOW.
2. AIR HANDLING UNITS SHALL BE PROVIDED WITH CONDENSATE PUMP.
3. BUILT-IN CONDENSATE PUMP AND SECONDARY FACTORY MOUNTED OVERFLOW SWITCH.
4. PROVIDE MERV 13 FILTERS,OPTIONAL ECONOMIZER KIT
5. PROVIDE 10-YEAR WARRANTY ON COMPRESSOR AND ALL PARTS
6. ALL CONTROL AND POWER WIRING BETWEEN INDOOR AND OUTDOOR UNITS TO BE PROVIDED BY THE MECHANICAL CONTRACTOR.
7. AC UNIT SHALL BE PROVIDED WITH WIRED THERMOSTAT.
8. PROVIDE DISCONNECT SWITCH & REMOTE 7 DAY PROGRAMMABLE THERMOSTAT.

NOTES:

1. ALL UNITS SHALL HAVE INSULATED BASE PAN AND 24 VOLT CONTROL CIRCUIT TERMINAL STRIP.
2. REFRIGERANT SHALL BE R-410A OR EQUIVALENT.
3. ALL UNITS SHALL BE PROVIDED WITH SINGLE POINT POWER SUPPLY CONNECTION WITH UNIT MOUNTED MAIN DISCONNECT SWITCH.
4. ALL RTU'S SHALL HAVE A COMPLETE FACTORY INSTALLED DDC MICROPROCESSOR BASED CONTROL SYSTEM AND REMOTE CONTROLLER LOCATED IN THE FILE STORAGE ROOM.
5. ALL UNITS SHALL COMPLY WITH REQUIREMENT OF THE NYCSCA SPECIFICATIONS §15971 AND 15855.
6. ALL UNITS SHALL BE PROVIDED WITH ECM MOTORS FOR BOTH SUPPLY AND RETURN/EXHAUST FANS FOR AIRFLOW BALANCING ONLY.
7. UNITS SHALL BE PROVIDED WITH AIRFLOW MEASURING STATION, RECOVERY WHEEL AND MOTORIZED OUTDOOR AND EXHAUST AIR DAMPERS.
8. UNIT INTERNAL STATIC PRESSURE SHALL INCLUDE DIRTY FILTER ALLOWANCE AS SHOWN

HVAC EQUIPMENT SCHEDULE SHEET #2

Drawing No.:

M008.00

Sheets in Contract Set:

OF

Sheets in DOB Set:

OF

CAD

NOTES:

1. SEE HVAC PIPING PLANS FOR THERMOSTATS, TEMPERATURE SENSORS, HUMIDITY SENSORS, DDC ROUTERS AND DDC POWER PANEL.
2. ALL DUCT TAKE-OFF SHALL BE PROVIDED WITH 45 DEGREE CLINCH WITH COLLAR AND VOLUME DAMPERS AS PER DETAIL ON M501.00.
3. ALL DUCT TEES AND MITERED ELBOWS SHALL BE PROVIDED WITH SPLITTER TEE WITH DIRECTIONAL VANES.
4. DUCT SMOKE DETECTOR MUST BE INSTALLED WITHIN 5 FT OF FIRE SMOKE DAMPER AS SHOWN ON PLAN.
5. PROVIDE YOUNG REGULATOR TYPE VOLUME DAMPER FOR INACCESSIBLE CONCEALED DUCTWORK.
6. PROVIDE ARCHITECTURAL CEILING ACCESS DOOR FOR INACCESSIBLE CONCEALED CEILING MOUNTED EQUIPMENT, FIRE DAMPER, SMOKE DAMPER AND FIRE SMOKE DAMPER. SEE M502.00 FOR DUCT ACCESS DOOR SIZE.
7. ALL LOCKER / SHOWER AND MOP / CAN WASH ROOM EXHAUST DUCTWORK AND GRILLES SHALL BE ALUMINUM. REFER TO SPECICIATIONS FOR FURTHER DETAILS
8. COORDINATE WITH ARCHITECTURAL DRAWINGS FOR CEILING AND WALL ACCESS DOORS FOR EQUIPMENT, VOLUME DAMPERS, FIRE DAMPERS, SD, FSD ETC.
9. PROVIDE 1" DUCT LINER FROM DISCHARGE OF ALL VAV BOXES UP TO ALL OUTLETS

KEYED NOTES:

1. 20X12 EXHAUST AIR UP F.S.D AT SLAB 2HR RATED FIRE WRAP FOR DUCTWORK WITHIN ENLCOSURE FROM MOTORIZED DAMPER UP TO LOUVER LOCATED ON 2ND LFOOR
2. INTERLOCK DAMPER OPERATION WITH KEF-4, EF-1 &EF-2.

NOTES:

1. SEE HVAC PIPING PLANS FOR THERMOSTATS, TEMPERATURE SENSORS, HUMIDITY SENSORS, DDC ROUTERS AND DDC POWER PANEL.
2. ALL DUCT TAKE-OFF SHALL BE PROVIDED WITH 45 DEGREE CLINCH WITH COLLAR AND VOLUME DAMPERS AS PER DETAIL ON M501.00.
3. ALL DUCT TEES AND MITERED ELBOWS SHALL BE PROVIDED WITH SPLITTER TEE WITH DIRECTIONAL VANES.
4. DUCT SMOKE DETECTOR MUST BE INSTALLED WITHIN 5 FT OF FIRE SMOKE DAMPER AS SHOWN ON PLAN.
5. PROVIDE YOUNG REGULATOR TYPE VOLUME DAMPER FOR INACCESSIBLE CONCEALED DUCTWORK.
6. PROVIDE ARCHITECTURAL CEILING ACCESS DOOR FOR INACCESSIBLE CONCEALED CEILING MOUNTED EQUIPMENT, FIRE DAMPER, SMOKE DAMPER AND FIRE SMOKE DAMPER.
   SEE M502.00 FOR DUCT ACCESS DOOR SIZE.
7. KITCHEN HOOD DUCTWORK SHALL PITCH TO THE HOOD. PROVIDE GREASE RESIDUE TRAP AS PER MECHANICAL CODE AT THE BOTTOM OF GREASE DUCT BASE.
8. PROVIDE 2 LAYERS OF FIRE WRAP AROUND THE HORIZONTAL KITCHEN HOOD EXHAUST DUCTWORK.
9. ALL LOCKER / SHOWER AND MOP / CAN WASH ROOM EXHAUST DUCTWORK AND GRILLES SHALL BE ALUMINUM. REFER TO SPECIACATIONS FOR FURTHER DETAILS
10. COORDINATE WITH ARCHITECTURAL DRAWINGS FOR CEILING AND WALL ACCESS DOORS FOR EQUIPMENT, VOLUME DAMPERS, FIRE DAMPERS, SD, FSD ETC.
11. PROVIDE 1" DUCT LINER FROM DISCHARGE OF ALL VAV BOXES UP TO ALL OUTLETS
12. PROVIDE 1" DUCT LINER FROM DISCHARGE OF ALL VUV UNIT UP TO ALL OUTLETS
13. PROVIDE CONDENSATE PUMP AND DRAIN LINE FOR ALL VUV AND VRF-AC TO THE JANITOR CLOSET.
14. PROVIDE REFRIGERANT PIPING FOR ALL VRF-AC TO VRF-ACCU AT THE ROOF

KEYED NOTES:

1. 8X8 CAN WASH RM. EXHAUST UP (KEF-3). DUCT TO BE CONSTRUCTED OF 18 GA. MIN.
2. 20x12 EA DN. PROVIDE 2 HR RATED FIRE WRAP FOR DUCTWORK WITHIN ENCLOSURE AND TO MOTORIZED DAMPER IN THE CELLAR.
3. 2'-0"x1'-0" EXHAUST LOUVER WITH W.M.S MIN. 10'-0" ABOVE GRADE.
4. 2'-0"x1'-0" WATER METER/PUMP RM. EXHAUST LOUVER WITH W.M.S MIN. 10'-0" ABOVE GRADE.
5. 2'-0"x1'-0" GROUND EQUIPMENT RM. EXHAUST LOUVER WITH W.M.S MIN. 10'-0" ABOVE GRADE.

POWER

SYMBOL	DESCRIPTION
2,4	CONDUIT AND WIRE RUN CONCEALED IN FLOOR, CEILING OR WALL. HASH MARKS DENOTE NUMBER OF WIRES IF MORE THAN TWO ARE REQUIRED. ARROWS DENOTE HOMERUNS OF PARTICULAR CIRCUITS, MINIMUM 2#12 THHN/THWN IN 3/4" CONDUIT, ALL BRANCH CIRCUITS FOR 120V IF GREATER THAN 100 FEET SHALL BE ONE SIZE LARGER MINIMUM, AND FOR 277V IF MORE THAN 200 FEET ONE SIZE LARGER MINIMUM (BOTH TO MEET VOLTAGE DROP REQUIREMENTS) " " DENOTES GROUND CONDUCTOR TO MATCH CIRCUIT WIRES
	CONDUIT , WITH WIRING.
	RISER CONDUIT , WITH WIRING.
J	JUNCTION/SPLICE BOX, SIZE AS REQUIRED. SUBSCRIPT 'F' INDICATES FLOOR MOUNTED.
	WIRE TROUGH/SPLICE BOX. SIZE AS REQUIRED.
PNL#1	"PNL" INDICATES PANEL DESIGNATION AND "1" INDICATES CIRCUIT NUMBER. CIRCUIT WIRE SHALL BE MINIMUM 2#12 THHN/THWN IN 3/4" CONDUIT, U.O.I. ALL COMPUTER CIRCUIT SHALL ALSO BE PROVIDED WITH A SEPARATE NEUTRAL
	LIGHTING AND POWER PANELBOARD, FLUSH MOUNTED IN WALL WITH COVER INDICATED.
	LIGHTING AND POWER PANELBOARD, SURFACE MOUNTED ON WALL.
ASCP-X	AUTOMATIC SHADE POWER AND CONTROL MODULE. CONTROLS UP TO TEN (10) SHADES. WALL MOUNTED ABOVE FINISH CEILING. 'X' DENOTES THE FLOOR LEVEL.
	GROUND
S	DUPLEX THREE WIRE GROUNDED RECEPTACLE, 20A, 125V. (NEMA 5-20R) MOUNTED 18" A.F.F. U.O.I. SUBSCRIPTS "F" INDICATES FURNITURE MOUNTED, "S" INDICATES SURGE SUPPRESSOR, "SW" INDICATES SWITCHED VIA RECEPTACLE RELAY CONTROL PANEL, "G" INDICATES WITH ISOLATED GROUND. 'GFCI' INDICATES WITH GROUND FAULT INTERRUPTER.
	MOTOR STARTER W/ PUSH BUTTON STATIONS AND H-O-A. NOTED STARTER RATING AS PER HORSEPOWER INDICATED.
SWITCH RATING / FUSE SIZE ("U" IF UNFUSED) / POLES	DISCONNECT SWITCH, RATING AND FUSING NOTED. HORSEPOWER RATING AS REQUIRED BY MOTOR LOAD. 'WP' INDICATES WEATHERPROOF NEMA 4X ENCLOSURE, OTHERWISE NEMA-1. SUBSCRIPT "L" INDICATES LOCKABLE TYPE.
	COMBINATION MOTOR STARTER AND DISCONNECT SWITCH.
S	MOTOR. HORSEPOWER INSCRIBED. 'NP' INDICATES NON FUSE 'F' DENOTES FRACTIONAL HORSEPOWER LESS THAN 1/2HP
	GROUND BUS BAR
	FUSED SWITCH, RATING AND FUSING INDICATED.
	UNFUSED SWITCH.
M	CURRENT TRANSFORMER AND METER.
M	MOTORIZED DAMPER (BY MECHANICAL)
UV-X-X	UNIT VENTILATOR (BY MECHANICAL)
CUH	CABINET UNIT HEATER (BY MECHANICAL)
	ELECTRICAL UNIT HEATER (BY MECHANICAL)
F s	FIRE SMOKE DAMPER (BY MECHANICAL)
F sp	FIRE-SMOKE DAMPER AND ACCESS DOOR INTERLOCKED WITH SMOKE PURGE SYSTEM
S	SMOKE DAMPER (BY MECHANICAL)
S sp	SMOKE DAMPER AND ACCESS DOOR INTERLOCKED WITH SMOKE PURGE SYSTEM
SPD	TRANSIENT VOLTAGE SURGE SUPPRESSION DEVICE

GENERAL NOTES

1. FOR AN EXPLANATION OF ABBREVIATIONS AND SYMBOLS USED ON THESE DRAWINGS, SEE THE ABBREVIATION LIST AND SYMBOLS LIST ON THIS SHEET AND SHEET E001, RESPECTIVELY.
2. THE CONTRACTOR SHALL CHECK THE LOCATION, NUMBER AND SIZE OF ALL CHASES PROVIDED ON THE CONSTRUCTION PLANS AND ARRANGE FOR ANY CHASES REQUIRED FOR CABINET OR BOXES.
3. CONTRACTOR SHALL FIELD VERIFY DIMENSIONS OF FINISHED CONSTRUCTION PRIOR TO FABRICATION AND INSTALLATION OF FIXTURES AND EQUIPMENT.
4. MOUNTING HEIGHTS OF EQUIPMENT AND DEVICES SHALL BE AS INDICATED ON THE SPECIFICATION 16130-(3-04). UTILIZE THE FOLLOWING MOUNTING HEIGHTS UNLESS OTHERWISE NOTED (ALL DIMENSIONS TO CENTERLINE OF BOX):
   A. RECEPTACLES (WALL MOUNTED) - 18" A.F.F. UOI
   B. COMMUNICATIONS OUTLETS - SAME HEIGHT AS RECEPTACLES
   C. LIGHTING SWITCHES AND CONTROLS - 48" A.F.F.
   D. LIGHTING FIXTURES (AREAS WITHOUT CEILINGS) - 9'-6" A.F.F. UOI.
   E. PANELBOARDS AND CABINETS - 78" TO TOP OF ENCLOSURE
5. FINAL LOCATION OF LIGHTING FIXTURES, OCCUPANCY/VACANCY SENSOR, DAY-LIGHT SENSOR, SMOKE DETECTORS AND OTHER CEILING MOUNTED ELECTRICAL EQUIPMENT SHALL BE IN ACCORDANCE WITH ARCHITECTURAL REFLECTED CEILING PLANS.
6. WHERE MULTIPLE SWITCHES AND RECEPTACLES ARE INDICATED AT THE SAME LOCATION, THEY SHALL BE MOUNTED BEHIND A COMMON FACEPLATE.
7. WHERE EQUIPMENT, LIGHTING FIXTURES AND WIRING DEVICES ARE SHOWN WITH CIRCUIT NUMBERS ONLY, THE MINIMUM BRANCH CIRCUITING REQUIREMENTS SHALL BE AS FOLLOWS:
   A. LIGHTING FIXTURES - 2#12 & 1#12G - 3/4" C.
   B. RECEPTACLES - 2#12 & 1#12G - 3/4" C.
   C. BRANCH CIRCUIT BREAKERS (120 VOLT) - 1P, 20A
   D. HOMERUNS TO PANELBOARDS SHALL CONTAIN NO MORE THAN (3) CIRCUITS.
   E. WHERE LIGHTING SWITCH INDICATIONS ARE NOT SHOWN, SWITCHES SHALL BE CONNECTED TO CONTROL ALL SWITCHED FIXTURES WITHIN THE CORRESPONDING SPACE.
8. WIRE SIZES SHALL BE INCREASED TO COMPENSATE FOR VOLTAGE DROP AS FOLLOWS: 120V AND 208V CIRCUITS LONGER THAN 100' SHALL UTILIZE MIN. #10 AWG.
9. NUMBER SHOWN AT LIGHTING FIXTURES, DEVICES AND EQUIPMENT INDICATES CIRCUIT NUMBER IN PANEL. PROVIDE WIRE AND CONDUIT TO INTERCONNECT THE AFOREMENTIONED AND ASSOCIATED SWITCHES AND CONTROL DEVICES WITH SAME CIRCUIT NUMBERS AND RUN TO PANEL VIA CIRCUIT HOMERUN SHOWN.
10. CONDUIT RUNS SHALL BE NEATLY INSTALLED. WHERE MULTIPLE RUNS FROM THE SAME PANEL ARE MADE, THE RUNS SHALL BE PARALLEL WITH EACH OTHER AND FASTENED WITH A COMMON SUPPORT, SPACED AND SECURED AT THE REQUIRED INTERVALS. BRANCHES SHALL TURN OFF TO THEIR OUTLETS IN AN ORGANIZED MANNER WITHOUT CROSSING EACH OTHER.
11. WIRING IN AIR PLENUM HUNG CEILINGS WHEN INDICATED TO BE INSTALLED WITHOUT CONDUIT OR EMT SHALL BE TEFLON JACKETED.
12. LIGHTING FIXTURES IN ACCESSIBLE CEILINGS SHALL BE FURNISHED WITH FLEXIBLE CONDUIT CONNECTIONS TO SEPARATELY MOUNTED JUNCTION BOXES. ONE JUNCTION BOX SHALL SERVE A MAXIMUM OF FOUR (4) FIXTURES. MAXIMUM LENGTH OF FLEXIBLE CONNECTION SHALL BE 6'-0".
13. PULL AND JUNCTION BOXES SHALL BE SURFACE MOUNTED TYPE IN UNFINISHED AREAS UNLESS OTHERWISE NOTED. LOCATE APPROXIMATELY WHERE INDICATED, ON WALLS, CEILING BEAMS OR SUSPENDED FROM CEILINGS, TO SUIT CONDUIT ENTRANCE, TO AVOID INTERFERENCE WITH EQUIPMENT OF OTHER TRADES AND TO LEAVE COVERS READILY ACCESSIBLE.
14. PULL BOXES WHETHER SIZED OR NOT SHALL BE MODIFIED BY THIS CONTRACTOR TO MEET FIELD CONDITIONS AND CODE REQUIREMENTS. ADDITIONAL PULL BOXES, IF REQUIRED TO SATISFY FIELD CONDITIONS AND CODE REQUIREMENTS, SHALL BE SUPPLIED AND INSTALLED BY THIS CONTRACTOR AT NO EXTRA COST.
15. PANELBOARDS LOCATED ON OTHER THAN MASONRY WALLS SHALL BE MOUNTED WITH MODULAR CHANNEL SUPPORTS SECURED TO THE BUILDING STRUCTURE.
16. CIRCUIT BREAKER HANDLE LOCKS SHALL BE PROVIDED FOR ALL BRANCH CIRCUITS SERVING EMERGENCY LIGHTING, EXIT LIGHTING, FIRE ALARM AND SECURITY EQUIPMENT.
17. ALL BRANCH CIRCUITS SHALL BE CLEARLY MARKED IN THE PANEL AS TO LOCATION AND PURPOSE.
18. GROUND FAULT INTERRUPTER (GFI) RECEPTACLES OR CIRCUIT BREAKERS SHALL BE PROVIDED FOR EQUIPMENT DISPENSING OR OTHERWISE IN CONTACT WITH LIQUIDS.
19. ALL NOTATIONS OF "SCALE" ARE INTENDED AS APPROXIMATIONS. THE CONTRACTOR SHALL BE RESPONSIBLE FOR ASCERTAINING THE EXACT LOCATIONS OF ALL EQUIPMENT AND CHECKING THE REQUIRED CLEARANCES.
20. ALL CIRCUITS CONTAINING GFI OUTLETS, CKT CONTAINING SOLID STATE DIMMERS, CKTS FOR COMPUTERS AND/OR PERIPHERALS AND RELATED EQUIPMENT AND CIRCUITS RECOMMENDED BY THE MANUFACTURERS SHALL HAVE A SEPARATE DEDICATED NEUTRAL.
21. CONTRACTOR SHALL PROVIDE THERMAL OVERLOAD AND PROPER PROTECTIVE DEVICE FOR THE EQUIPMENT AS PER MANUFACTURERS REQUIREMENTS.
22. THIS CONTRACTOR SHALL PROVIDE SEPARATE RACEWAYS FOR CONDUCTORS ON NORMAL AND EMERGENCY CIRCUITS.
23. ELECTRICAL PENETRATIONS (CONDUITS, WIRING ETC.) THOUGHT WALL(S), PARTITION(S), AND/OR FLOOR CONSTRUCTION SHALL HAVE THE ANNULAR SPACE AROUND PENETRATION SEALED AND/OR FIRE STOPPED WITH UL APPROVED SYSTEM TO MATCH RATING OF ASSEMBLY. PATCH ALL DISTURBED SURFACES TO MATCH ADJACENT SURFACES.
24. THE CONTRACTOR SHALL COORDINATE WITH THE HVAC, P&D AND STRUCTURAL TRADES FOR EXACT LOCATIONS OF MOTORS AND EQUIPMENT, IN ORDER TO AVOID INTERFERENCE.
25. IN THE BOILER ROOM, SYSTEM CONDUITS, SUCH AS FOR LIGHTING AND POWER FEEDERS, LOW VOLTAGE, FIRE SIGNAL, ETC., SHALL NOT BE RUN OVER BOILERS.
26. NO CONDUIT SHALL BE RUN IN ANY FLOOR IN CONTACT WITH THE EARTH UNLESS OTHERWISE DIRECTED ON THE PLAN. IN SUCH AREAS, CONDUIT FOR MOTORS AND STARTERS SHALL BE RUN OVERHEAD, SUPPORTED AS REQUIRED.
27. WHERE RECESSED FIXTURES ARE INDICATED ON THESE PLANS AND WET PLASTER CEILING CONSTRUCTION IS USED, PLASTER FRAMES SHALL BE PROVIDED BY THE ELECTRICAL CONTRACTOR AND INSTALLED BY THE GENERAL CONTRACTOR. WITH OTHER TYPES OF HUNG CEILING CONSTRUCTION, LIGHTING FIXTURES SHALL BE APPROPRIATE TO MEET THE REQUIREMENTS OF THAT CEILING CONSTRUCTION.
28. CONTRACTOR SHALL PROVIDE SEPARATE RACEWAYS FOR CONDUCTORS ON NORMAL AND EMERGENCY CIRCUITS.
29. ANY DEVICE EXCEEDS 16 SQ INCHES INSTALLED IN FIRE RATED WALL SHALL BE PROVIDE WITH 2 HOURS FIRED RATED WRAPPING MATERIAL.

ELECTRICAL CONDUIT INSTALLATION

(IN CONCRETE SLAB AND STEEL DECK CONSTRUCTION)

1. CONTRACTOR SHALL COORDINATE THE LOCATION AND EXTENT OF STEEL DECK AREA WITH ELECTRICAL TRADES.
2. CONDUIT PLACED IN SLAB SHALL BE PLACED ON TOP OF STEEL DECK AND BELOW TOP REINFORCEMENT.
3. CONDUITS SHALL HAVE A MINIMUM COVER OF 1" OF CONCRETE.
4. MAXIMUM SIZE OF CONDUIT IN CONCRETE SLAB AND STEEL DECK CONSTRUCTION SHALL NOT BE LARGER THAN 1" OUTSIDE DIAMETER.
5. PLACEMENT OF CONDUIT IN DECK RIBS SHALL BE AS PER DETAIL.
6. ALL CONDUITS PARALLEL TO DECK OR SLAB SPAN SHALL HAVE A MINIMUM SPACING OF SIX INCHES (6") ON CENTER. ALL ADDITIONAL CONDUITS, IF REQUIRED, ARE TO BE RUN CONCEALED WITHIN THE HUNG CEILING.|
7. ALL CONDUITS PERPENDICULAR TO THE DECK OR SLAB SPAN SHALL HAVE A MINIMUM SPACING OF SIXTEEN INCHES. ALL ADDITIONAL CONDUITS, IF REQUIRED, ARE TO BE RUN CONCEALED WITHIN THE HUNG CEILING.
8. PROVIDE ADDITIONAL W.W.F. OVER CONDUIT OF SAME SIZE AS TOP W.W.F. WITH AN OVERHANG OF NOT LESS THAN 12 INCHES ON BOTH SIDES OF EACH CONDUIT.
9. JUNCTION BOXES MAY BE PLACED IN CONCRETE BUT SHALL NOT EXCEED 6"x 6" x 3-1/2" IN DEPTH AND SHALL BE SEPARATED FROM OTHER JUNCTION BOXES BY NOT LESS THAN 18" OF CONCRETE.

PLAN NOTES:

1. FOR GENERAL NOTES, SYMBOL LIST, DRAWING LIST AND ABBREVIATIONS REFER TO DWGS E001
2. FOR EXACT LOCATION AND MOUNTING HEIGHTS FOR PLUMBING AND MECHANICAL EQUIPMENT AND DEVICES REFER TO PLUMBING AND MECHANICAL DWGS.
3. ALL CONDUIT PENETRATIONS THROUGH FIRE RATED PARTITIONS ARE TO BE PROVIDED WITH FIRE STOP SEALS AS REQUIRED BY CODE TO MAINTAIN FIRE RATING OF PARTITIONS.
4. UNLESS OTHERWISE NOTED ON FURNITURE AND ELECTRICAL DRAWINGS, MOUNTING HEIGHT OF OUTLETS AND EQUIPMENT SHALL BE AS INDICATED ON SYMBOL LIST & SPECIFICATIONS.
5. ALL POWER CIRCUITS SHALL BE PROVIDED WITH THEIR OWN SEPARATE NEUTRAL.
6. FSD DAMPERS ON THIS FLOOR SHALL BE WIRED TO PANEL 'EPP-C' CKT #15. PROVIDE ADDITIONAL CKTS AS REQUIRED.
7. FOR COMPUTER OUTLETS CIRCUITING (WIRING) REFER TO "RECEPTACLES & DATA LAYOUT" DETAIL NO. 4 IN DWG E707.
8. FINAL COLOR SELECTIONS FOR EQUIPMENT & DEVICES SHALL BE BY ARCHITECT.
9. ALL GROUNDING SHALL BE AS PER CODE AND SPECIFICATION SECTION 16450.
10. ALL SPECIFIED HVAC EQUIPMENT (ALL ELECTRIC UNIT HEATER, ELECTRIC WATER UNIT HEATER, ELECTRIC WATER CABINET UNIT HEATER: EUH, WUH, WCUH & ETC.) SHALL BE PROVIDED WITH DISCONNECT SWITCHES (BUILT-IN OR SEPARATE). COORDINATE WITH MECHANICAL CONTRACTOR AND DWGS.
11. ALL PENETRATIONS TO THE BUILDING FOUNDATION WALLS SHALL BE MADE WITH WATERTIGHT SEAL.
12. INTERACTIVE WHITEBOARD AND RECEPTACLE/DATA RACEWAY CIRCUITS TO BE POWERED THROUGH THE LOAD CONTROL PANEL "CP-C" LOCATED IN THE ELECTRICAL ROOM. REFER TO CONTROL PANELS SCHEDULE DRAWING E508.00.
13. POWER TO THE SPLIT TYPE AC SYSTEM INDOOR UNIT SHALL BE FED FROM THE CORRESPONDING OUTDOOR UNIT. REFER TO THE WIRING DIAGRAM DETAIL NO. 5 IN DRAWING E704.00.
14. PROVIDE CIRCUIT AND CONNECT ALL PLUMBING FIXTURES ON THIS FLOOR TO PANEL 'PP-C' CKTS AS SHOWN ON THE DWG.
15. ALL OUTDOOR DEVICES INCLUDING BUT NOT LIMITED TO SWITCHES, OUTLETS AND DISCONNECT SWITCHES FOR EXTERIOR UNITS HAS TO BE WEATHER PROOF AND SHALL BE INSTALLED PROPERLY WITH WEATHER PROOF ACCESSORIES.
16. LOCATION OF WALL ART. NO M/E/P FIXTURES, DEVICES OR OUTLETS SHALL BE LOCATED IN THIS AREA WITHOUT APPROVAL FROM THE PUBLIC ARTS FOR PUBLIC SCHOOLS (PAPS) REPRESENTATIVE AND ARCHITECT.
17. ALL RECEPTACLES LOCATED IN PRE-KINDERGARDEN, KINDERGARDEN, AND D75 CLASSROOMS SHALL BE TAMPER PROOF "K" TYPE.
18. GENERATOR MAINTENANCE RECEPTACLES SHALL BE POWERED BY CIRCUIT ON PANEL PP-GEN LOCATED INSIDE GENRATOR ENCLOSURE. SEE PANEL SCHEDULE ON DWG E605.
19. ALL WIRING AND CONDUIT ARE ASSUMED TO BE #12AWG & 3/4" CONDUIT U.O.N. ON PLANS/PANEL SCHEDULE.
20. FOLLOWING MOUNTING HEIGHTS UNLESS OTHERWISE NOTED (ALL DIMENSIONS TO CENTERLINE OF BOX):
    - A. RECEPTACLES (WALL MOUNTED) - 18" A.F.F. U.O.N.
    - B. RECEPTACLES AT FIN-TUBE WALL - 36" A.F.F. U.O.N.
    - C. RECEPTACLES FOR INTERACTIVE WHITEBOARD - 42" A.F.F. U.O.N. (INSTALLED ON THE LEFT SIDE OF BOARD)
    - D. RECEPTACLES ON COUNTER WALL - 48" A.F.F. U.O.N.

PLAN NOTES:

1. FOR GENERAL NOTES, SYMBOL LIST, DRAWING LIST AND ABBREVIATIONS REFER TO DWGS E001
2. FOR EXACT LOCATION AND MOUNTING HEIGHTS FOR PLUMBING AND MECHANICAL EQUIPMENT AND DEVICES REFER TO PLUMBING AND MECHANICAL DWGS.
3. ALL CONDUIT PENETRATIONS THROUGH FIRE RATED PARTITIONS ARE TO BE PROVIDED WITH FIRE STOP SEALS AS REQUIRED BY CODE TO MAINTAIN FIRE RATING OF PARTITIONS.
4. UNLESS OTHERWISE NOTED ON FURNITURE AND ELECTRICAL DRAWINGS, MOUNTING HEIGHT OF OUTLETS AND EQUIPMENT SHALL BE AS INDICATED ON SYMBOL LIST & SPECIFICATIONS.
5. ALL POWER CIRCUITS SHALL BE PROVIDED WITH THEIR OWN SEPARATE NEUTRAL.
6. FSD DAMPERS ON THIS FLOOR SHALL BE WIRED TO PANEL 'EPP-C' CKT #15. PROVIDE ADDITIONAL CKTS AS REQUIRED.
7. FOR COMPUTER OUTLETS CIRCUITING (WIRING) REFER TO "RECEPTACLES & DATA LAYOUT" DETAIL NO. 4 IN DWG E707.
8. FINAL COLOR SELECTIONS FOR EQUIPMENT & DEVICES SHALL BE BY ARCHITECT
9. ALL GROUNDING SHALL BE AS PER CODE AND SPECIFICATION SECTION 16450.
10. ALL SPECIFIED HVAC EQUIPMENT (ALL ELECTRIC UNIT HEATER, ELECTRIC WATER UNIT HEATER, ELECTRIC WATER CABINET UNIT HEATER: EUH, WUH, WCUH & ETC.) SHALL BE PROVIDED WITH DISCONNECT SWITCHES (BUILT-IN OR SEPARATE). COORDINATE WITH MECHANICAL CONTRACTOR AND DWGS.
11. ALL PENETRATIONS TO THE BUILDING FOUNDATION WALLS SHALL BE MADE WITH WATERTIGHT SEAL.
12. INTERACTIVE WHITEBOARD AND RECEPTACLE/DATA RACEWAY CIRCUITS TO BE POWERED THROUGH THE LOAD CONTROL PANEL "CP-1" LOCATED IN THE ELECTRICAL CLOSET. REFER TO CONTROL PANELS SCHEDULE DRAWING E508.00.
13. POWER TO THE SPLIT TYPE AC SYSTEM INDOOR UNIT SHALL BE FED FROM THE CORRESPONDING OUTDOOR UNIT. REFER TO THE WIRING DIAGRAM DETAIL NO. 5 IN DRAWING E704.00.
14. PROVIDE CIRCUIT AND CONNECT ALL PLUMBING FIXTURES ON THIS FLOOR TO PANEL 'PP-C' CKTS AS SHOWN ON THE DWG.
15. ALL OUTDOOR DEVICES INCLUDING BUT NOT LIMITED TO SWITCHES, OUTLETS AND DISCONNECT SWITCHES FOR EXTERIOR UNITS HAS TO BE WEATHER PROOF AND SHALL BE INSTALLED PROPERLY WITH WEATHER PROOF ACCESSORIES.
16. LOCATION OF WALL ART. NO M/E/P FIXTURES, DEVICES OR OUTLETS SHALL BE LOCATED IN THIS AREA WITHOUT APPROVAL FROM THE PUBLIC ARTS FOR PUBLIC SCHOOLS (PAPS) REPRESENTATIVE AND ARCHITECT.
17. ALL RECEPTACLES LOCATED IN PRE-KINDERGARDEN, KINDERGARDEN, AND D75 CLASSROOMS SHALL BE TAMPER PROOF "K" TYPE.
18. GENERATOR MAINTENANCE RECEPTACLES SHALL BE POWERED BY CIRCUIT ON PANEL PP-GEN LOCATED INSIDE GENRATOR ENCLOSURE. SEE PANEL SCHEDULE ON DWG E605.
19. ALL WIRING AND CONDUIT ARE ASSUMED TO BE #12AWG & 3/4" CONDUIT U.O.N. ON PLANS/PANEL SCHEDULE.
20. FOLLOWING MOUNTING HEIGHTS UNLESS OTHERWISE NOTED (ALL DIMENSIONS TO CENTERLINE OF BOX):
    - A. RECEPTACLES (WALL MOUNTED) - 18" A.F.F. U.O.N.
    - B. RECEPTACLES AT FIN-TUBE WALL - 36" A.F.F. U.O.N.
    - C. RECEPTACLES FOR INTERACTIVE WHITEBOARD - 42" A.F.F. U.O.N. (INSTALLED ON THE LEFT SIDE OF BOARD).
    - D. RECEPTACLES ON COUNTER WALL - 48" A.F.F. U.O.N.

FIRE DETECTION & ALARM SYSTEM

SYMBOL	DESCRIPTION
FACP	FIRE ALARM SYSTEM CONTROL PANEL. WITH INTEGRATED DACT & INTEGRATED POST FIRE PURGE PANEL
FASP	FIRE SYSTEM SMOKE PURGE CONTROL PANEL
DACT	DIGITAL ALARM COMMUNICATOR TRANSMITTER
FARA	FIRE ALARM REMOTE ANNUNCIATOR
FAPR	FIRE ALARM PRINTER
F	FIRE SYSTEM PULL STATION WITH FALSE ALARM STOPPER, FLUSH MTD AT 4'-0" AFF.
30 G	FIRE SIGNAL STROBE MTD. AT 8'-0"AFF TO DEVICE BOTTOM OR 6" MIN. BELOW CEILING SUBSCRIPT 'G' DENOTES WITH GUARD. NUMERICAL DENOTES CANDELA RATING.
30 G	FIRE SIGNAL HORN/STROBE, FLUSH MTD. AT 8'-0"AFF TO DEVICE BOTTOM OR 6" MIN. BELOW CEILING. SUBSCRIPT 'G' DENOTES WITH GUARD NUMERICAL DENOTES CANDELA RATING IN DB.
F 30 G	FIRE ALARM PULL STATION AND HORN/STROBE WITH FALSE ALARM STOPPER ASSEMBLY MOUNTED 8'-0" AFF TO DEVICE BOTTOM OR 6" MIN. BELOW CEILING SUBSCRIPT 'G' DENOTES WITH GUARD NUMERICAL DENOTES CANDELA RATING IN DB.
LSS	GYMATORIUM LOCAL SOUND SYSTEM CABINET.
DB	GYMATORIUM DIMMER PANEL BOARD.
FDS	LOCKABLE FUSE DISCONNECT SWITCH WITH SOLID NEUTRAL BAR
FCO	FUSE CUTOUT PANEL.
ATS	AUTOMATIC TRANSFER SWITCH (ATS)
S EX	SMOKE DETECTOR. 'EX' DENOTES EXPLOSION PROOF,' ER' INDICATES ELEVATOR RECALL
H	HEAT DETECTOR (194 F FIXED TEMPERATURE)
SD	SMOKE DETECTOR DUCT MOUNTED
C	CARBON MONOXIDE SENSOR
F S	MOTORIZED FIRE AND SMOKE DAMPER (BY HVAC)
F SP	MOTORIZED FIRE SMOKE PURGE DAMPER (BY HVAC)
S SP	MOTORIZED SMOKE PURGE DAMPER (BY HVAC)
S	MOTORIZED SMOKE DAMPER (BY HVAC)
ER	ELEVATOR RECALL
TS	FIRE ALARM TAMPER SWITCH (BY PLUMBING).
WF	FIRE ALARM FLOW SWITCH (BY PLUMBING).
MM	INDIVIDUALLY ADDRESSABLE MONITOR MODULE
CM	CONTACT INTERFACE MODULE
R	RELAY MODULE
BP	BOOSTER POWER SUPPLY
SH	ELEVATOR SHAFT VENTILATION LOUVER
ϕ^L OR ϕ^T	TWIST LOCK RECEPTACLE MOUNTED AT 18" AFF.
SHA	SMOKE HATCH

FA107.00	ROOF PLAN - FIRE ALARM SYTEMS
FA202.00	FIRE ALARM SYSTEM INPUT_OUTPUT MATRIX

SPECIAL INSPECTION NOTES

SPECIAL INSPECTIONS REQUIRED IN ACCORDANCE WITH CHAPTER 17 AND THE APPLICABLE SECTIONS OF THE 2014 NYC CONSTRUCTION CODE ARE LISTED IN THE FOLLOWING TABLES. THE CONTRACTOR MUST NOTIFY THE ARCHITECT OR ENGINEER FOR SPECIAL INSPECTIONS AT LEAST 72 HOURS BEFORE THE SPECIFIC WORK COMMENCES.

THE "AUTHORITY" SHALL BE RESPONSIBLE FOR THE FOLLOWING SPECIAL INSPECTIONS:
THE "CONTRACTOR" SHALL BE RESPONSIBLE FOR THE FOLLOWING SPECIAL INSPECTIONS:

- FIRE-RESISTANT PENETRATION AND JOINTS - BC 1704.27

REQUIRED INSPECTIONS AND TESTS OF MATERIALS DESIGNATED FOR "SPECIAL INSPECTION" BY THE CONTRACTOR SHALL BE MADE UNDER THE DIRECT SUPERVISION OF A LICENSED ARCHITECT OR ENGINEER RETAINED BY OR ON THE BEHALF OF THE CONTRACTOR WHO SHALL BE ACCEPTABLE TO THE ARCHITECT OR ENGINEER WHO SUPERVISED THE PREPARATION OF THE PLANS.

FIRE ALARM SYSTEM GENERAL NOTES:

1. THE FIRE ALARM SYSTEM SHOWN ON THE RISER DIAGRAM, FLOOR PLANS AND SPECIFICATIONS IS ENTIRELY NEW. UPON COMPLETION OF THIS WORK AND OF ALL TESTS AND AFTER OBTAINING THE AUTHORITY'S AND THE FIRE DEPARTMENT'S APPROVALS, THE NEW FIRE ALARM SYSTEM SHALL BECOME IN USE.
2. ALL CONDUITS AND CONTROL PANELS SHALL BE GROUNDED TO THE WATER MAIN WITH A MINIMUM #8 CONDUCTOR.
3. SMOKE PURGE DAMPERS SHALL BE ZONED PER FLOOR.
4. VISUAL DEVICES SHALL NOT HAVE ANY APPURTENANCES WITHIN 5 FEET RADIUS.
5. PROVIDE FIRE STOP SEAL AT ALL PENETRATIONS OF FIRE RATED PARTITIONS.
6. ALL COMPONENTS SHOWN ON RISER DIAGRAMS, BUT NOT ON THE PLAN OR VICE VERSA, SHALL BE INCLUDED AS IF SHOWN ON BOTH.
7. THE INSPECTION, TESTING, AND MAINTENANCE OF SYSTEMS, THEIR INITIATING DEVICES, AND NOTIFICATION APPLIANCES SHALL COMPLY WITH THE REQUIREMENTS OF CHAPTER 14 NFPA CODE.
8. ALL MATERIAL/DEVICES SHALL BE IN COMPLIANCE WITH F.D STANDARDS AND UL LISTED.
9. CO DETECTION SHALL BE LISTED IN ACCORDANCE WITH UL 2075.
10. CONTRACTOR TO PROVIDE BATTERY CALCULATION SHOWING 20 PERCENT SAFETY MARGIN TO THE CALCULATED AMP-RATING.
11. ALL EQUIPMENT AND COMPONENTS SHALL BE LISTED FOR THE PURPOSE FOR WHICH THEY ARE INSTALLED.

PLAN NOTES:

1. FOR GENERAL NOTES, SYMBOL LIST, ABBREVIATIONS AND FIRE ALARM SYSTEM DRAWING LIST REFER TO DWG FA001.00
2. FOR EXACT LOCATION AND QUANTITIES OF MECHANICAL AND PLUMBING EQUIPMENT AND DEVICES REFER TO MECHANICAL AND PLUMBING DWGS.
3. ALL CONDUIT PENETRATIONS THROUGH FIRE RATED PARTITIONS ARE TO BE PROVIDED WITH FIRE STOP SEALS AS REQUIRED BY CODE TO MAINTAIN FIRE RATING OF PARTITIONS.
4. UNLESS OTHERWISE NOTED ON DRAWING MOUNTING HEIGHTS OUTLETS AND EQUIPMENT SHALL BE AS INDICATED ON SYMBOL LIST & SPECIFICATIONS.
5. FOR FIRE SMOKE DAMPER CIRCUITS REFER TO FLOOR POWER PLAN DWGS.
6. WALL MOUNTED HORNS AND VISUAL FIRE ALARMS (STROBES) SHALL BE MOUNTED SUCH THAT THE ENTIRE STROBE LENS IS LOCATED NOT GREATER THAN 96" ABOVE THE FINISHED FLOOR OR 6" BELOW THE CEILING, WHICHEVER IS LOWER.
7. FIRE ALARM PULL STATIONS SHALL BE MOUNTED MIN 3'-6" AND MAX 4'-0" FROM THE FLOOR LEVEL TO THE ACTIVATING HANDLE.
8. ACCESS SHALL BE PROVIDE TO EACH DETECTOR FOR PERIODIC INSPECTION, MAINTENANCE AND TESTING AS PER SECTION 907.12 OF N.Y.C. BUILDING CODE.
9. ARTWORK: NO M/E/P, FIXTURES, DEVICES OR OUTLETS MAY BE LOCATED IN THIS AREA WITHOUT APPROVAL FROM PUBLIC ART FOR PUBLIC SCHOOLS (PAPS) AND ARCHITECT.
10. SEE TYPICAL DETAILS #10 ON DRAWING E710.00 FOR APPROXIMATE LOCATION OF CO DETECTOR INSTALLED INSIDE GENERATOR ENCLOSURE AND OTHER COMPONENTS TO BE TIED INTO FIRE ALARM SYSTEM.
11. FIRE ALARM AUTOMATIC TRANSFER SWITCH (FA-ATS) IS LOCATED IN A 2-HR RATED ROOM.

PLAN NOTES:

1. FOR GENERAL NOTES, SYMBOL LIST, ABBREVIATIONS AND FIRE ALARM SYSTEM DRAWING LIST REFER TO DWG FA001.00
2. FOR EXACT LOCATION AND QUANTITIES OF MECHANICAL AND PLUMBING EQUIPMENT AND DEVICES REFER TO MECHANICAL AND PLUMBING DWGS.
3. ALL CONDUIT PENETRATIONS THROUGH FIRE RATED PARTITIONS ARE TO BE PROVIDED WITH FIRE STOP SEALS AS REQUIRED BY CODE TO MAINTAIN FIRE RATING OF PARTITIONS.
4. UNLESS OTHERWISE NOTED ON DRAWING MOUNTING HEIGHTS OUTLETS AND EQUIPMENT SHALL BE AS INDICATED ON SYMBOL LIST & SPECIFICATIONS.
5. FOR FIRE SMOKE DAMPER CIRCUITS REFER TO FLOOR POWER PLAN DWGS.
6. WALL MOUNTED HORNS AND VISUAL FIRE ALARMS (STROBES) SHALL BE MOUNTED SUCH THAT THE ENTIRE STROBE LENS IS LOCATED NOT GREATER THAN 96" ABOVE THE FINISHED FLOOR OR 6" BELOW THE CEILING, WHICHEVER IS LOWER.
7. FIRE ALARM PULL STATIONS SHALL BE MOUNTED MIN 3'-6" AND MAX 4'-0" FROM THE FLOOR LEVEL TO THE ACTIVATING HANDLE.
8. ACCESS SHALL BE PROVIDE TO EACH DETECTOR FOR PERIODIC INSPECTION, MAINTENANCE AND TESTING AS PER SECTION 907.12 OF N.Y.C. BUILDING CODE.
9. ARTWORK: NO M/E/P, FIXTURES, DEVICES OR OUTLETS MAY BE LOCATED IN THIS AREA WITHOUT APPROVAL FROM PUBLIC ART FOR PUBLIC SCHOOLS (PAPS) AND ARCHITECT.
10. SEE TYPICAL DETAILS #10 ON DRAWING E710.00 FOR APPROXIMATE LOCATION OF CO DETECTOR INSTALLED INSIDE GENERATOR ENCLOSURE AND OTHER COMPONENTS TO BE TIED INTO FIRE ALARM SYSTEM.
11. FIRE ALARM AUTOMATIC TRANSFER SWITCH (FA-ATS) IS LOCATED IN A 2-HR RATED ROOM.

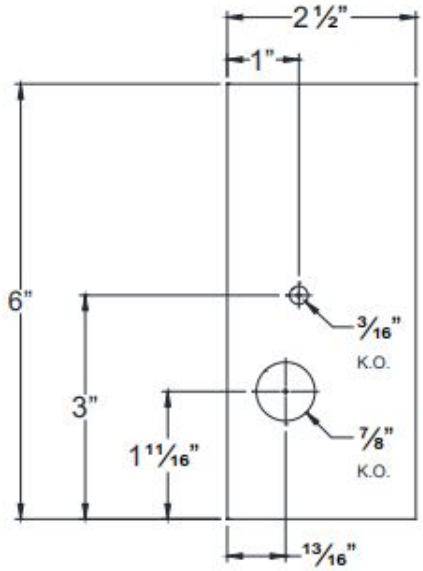
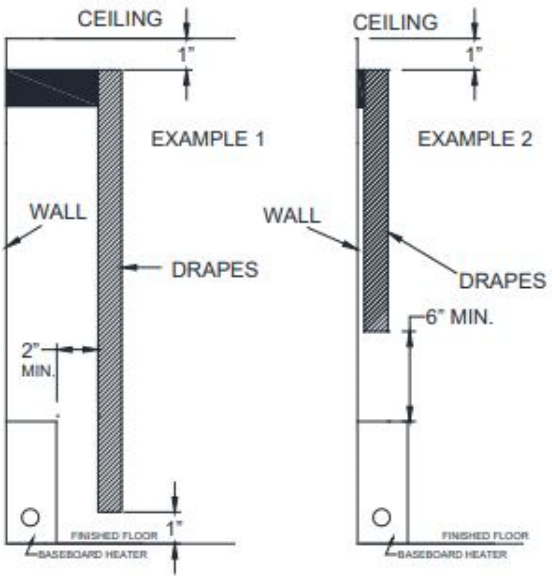
QTY	MODEL	TAG	WATTAGE	VOLTS	PHASE	AMPS	FINISH	ACCESSORIES	THERMOSTAT	OPTIONS
1		BB-5	1250	120	1	10.4	Ivory	DS	None	WWA06
1		BB-10	2500	208	1	12	Ivory	DS	None	NOVALUE

NOTES/SPECIAL INSTRUCTIONS:





- Available in white or ivory with stainless steel heating element and aluminum fins
- Painted 22 gauge steel front with 20 gauge junction boxes located on each end of the heater - juction boxes contain quick connect cable clamps and 6" ground lead wires
- Over-temperature thermal limit extends entire length of heated area
- A full length wireway provided along the back of the heater - enclosed conduit available
- Heater can be mounted to the wall by using the key hole knocouts every 4" at the back of the heater
- Optional in-built thermostats field installed in the junction box
- For high altitude applications, delete the SW in the model number and add HAW
- Height: 6" Depth: 2½"

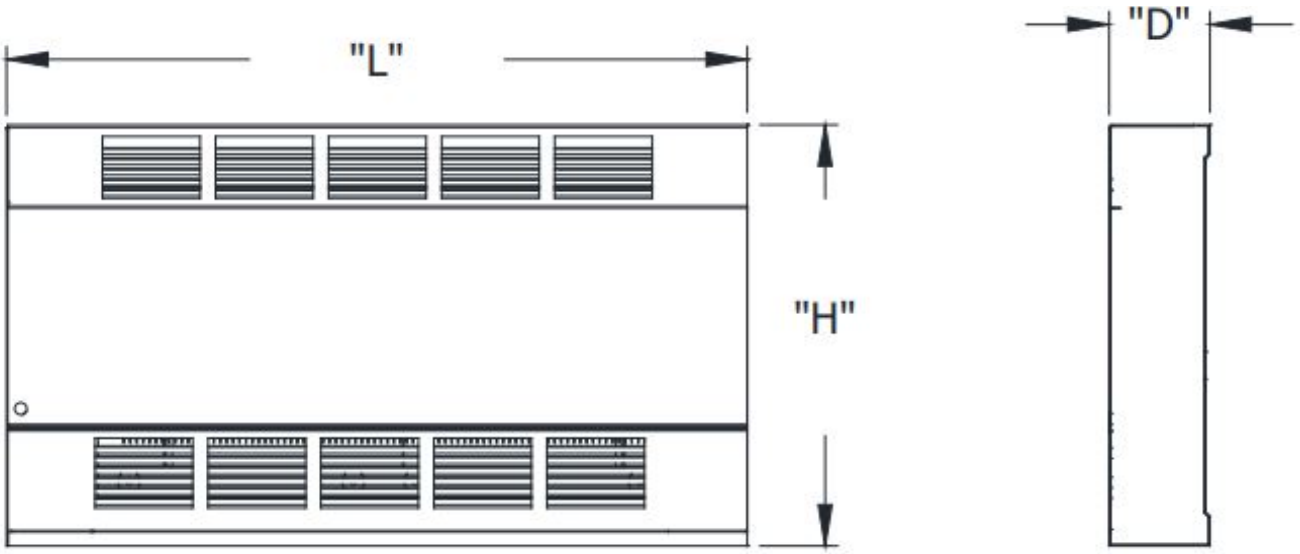
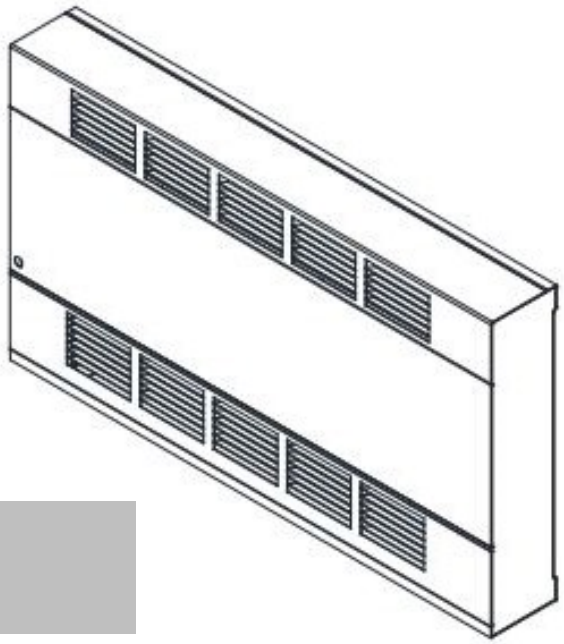
1		CONV-1.25 KV	1250	208	1	6.01	R9	None	

NOTES/SPECIAL INSTRUCTIONS:



- Front In / Front Out air pattern
- 16 Gauge steel housing
- Powder coated with textured beige finish
- Tubular pre-wired wireway with 40 Amp capacity
- Connection boxes for right or left hand wiring with combinations ½" - ¾" knockouts at back and bottom
- Steel Heating element with steel fins
- Linear limit thermal overload with automatic reset
- Recess trim frame included
- Custom colors available, contact factory
- Not for residential applications



HOW TO DESIGNATE A MODEL:

M41	25	F	48	1000	T
Series Number	Cabinet Size 45=20"H x 5"D 25=11"H x 4"D	Voltage/Phase G=277V, 1 Phase J=208V, 3 Phase K=240V, 3 Phase F=208V, 1 Phase H=240V, 1 Phase	Unit Length (Inches) 24, 36, 48, 60, or 72	Total Wattage	Control Option Blank=None R, R2, or R9=Relay T or T2=Thermostat (See control option chart)

Product Specifications

CABINET:
4100 series casing shall be of square design with front inlet and outlet grills suitable for recess installation. The cabinet is fabricated from 16 gauge cold rolled steel and finished with powder coated baked enamel. Junction boxes are available for left or right wiring and connected by pre-wired 40 Amp capacity wireway.

ELEMENT:
All steel high mass element construction with Nickel-Chromium resistance wire embedded in compacted efficient dielectric to ensure proper heat transfer. Aluminum fins mechanically bonded to steel tube allows for increased surface area and even heat transfer.

LIMIT CONTROLS:
Automatic reset hydraulic thermal overload covers full length of heating element and shuts down heater when safe operating temperatures are exceeded.

WIRING:
Wiring connections shall be made in left end of cabinet enclosure. Wiring must enter into control enclosure behind perforated steel grill.

CONTROLS:
All controls are accessible only through control enclosure door. Security type fasteners restrict access to controls. Built in thermostat with manual adjustment are located in control enclosure.

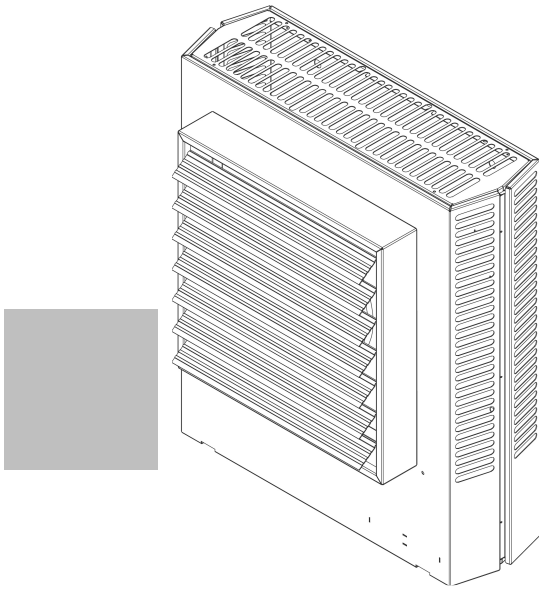
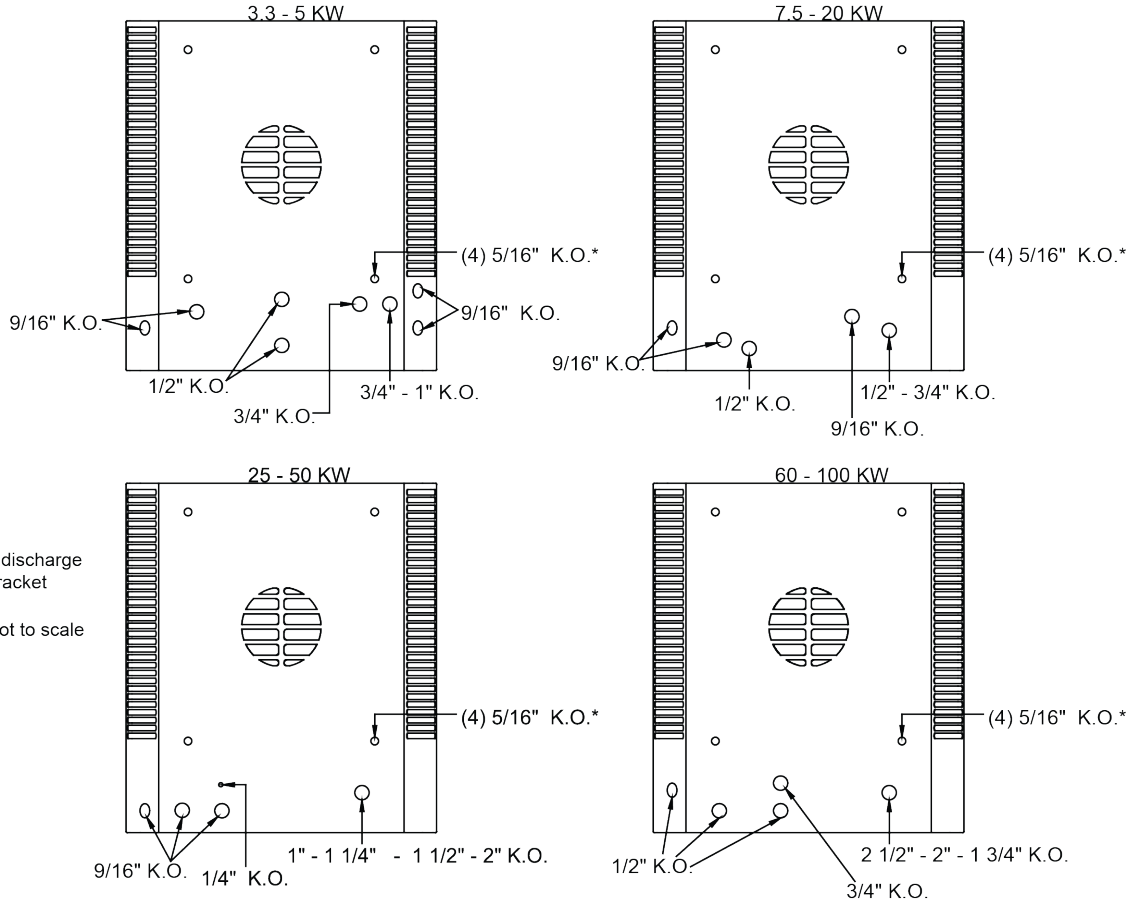
- Heavy 18 gauge steel construction
- Powder coated paint finish
- Copper clad steel sheath element with brazed fins and Nichrome elment wire
- Totally enclosed fan motors
- Louvers are individually adjustable for directional air flow
- Optional remote and unit mounted controls include thermostats, disconnects, and fan swithces
- Optional accessories include mounting brackets, louvers, fan guards, and dust shields





* For vertical discharge mounting bracket

HOW TO DETERMINE A MODEL:

HF	2	B	51	10	C	A	1

Element Volts	Phase	Motor Voltage	Model Series	Element KW	Control System	Transformer	Control Volts
F = 208	1 = 1-Phase	F = 208	51		Blank = None	Blank = None	1 = 24
H = 240	2 = 1 or 3-Ph.	H = 240			C = Contactor	A = Included	2 = 120
HF = 240/208	3 = 3-Phase	B = 240 / 208					(with CA option)
G = 277		G = 277					
P = 480		P = 480					

* 600 Volt units 5KW - 50KW available on special order, consult factory for pricing & availability

Product Specifications

CONSTRUCTION:
Heavy 18 gauge welded steel cabinet with powder coated finish and control compartmen thousing a master terminal board with a hinged and latched access door, simplifying wiring, installation & maintenance.

HEATING ELEMENT:
Copper clad steel sheath element with continuously brazed steel fins formed to allow side draw through air flow.

OVERHEAT PROTECTION:
All units come equipped with automatic reset type limit controls to de-energize the heater should an over-temperature situation occur.

FAN and MOTOR:
Totally enclosed, 1-speed, 1-phase, permanently lubricated, thermally protected motors with unit bearings on 3 KW - 20 KW models. Totally enclosed, 2-speed, 1-phase, permanently lubricated, thermally protected motors with sleeve bearings on 25 KW - 50 KW models. All motors mounted with rubber insulators to minimize vibration & noise. Fan over-ride purges unit of residual heat at shutdown.

LOUVER ASSEMBLY:
Louvers are individually adjustable for directional control of air flow up to 15° from straight horizontal. Optional diffusers available for down flow (vertical discharge) applications

TEMPERATURE CONTROLS:
Optional low voltage and line voltage thermostats available with an adjustable temperature range of 40°F to 110° F. Units with model numbers ending in CA1 are factory wired for low voltage controls. 25 KW through 50 KW units are designed for two stage heating operation.

INSTALLATION:
Unit Heaters can be mounted for horizontal or vertical discharge. Applications up to 6000 Ft. See UH Series above 6000 Ft

FEATURES:
- Made in U.S.A.

FIELD INSTALLED OPTIONS:
- In-unit or wall mounted temperature control thermostats low or line voltage.
- Summer fan switch to operate the fan only.
- Power disconnect switch.
- Heat stratification thermostat.

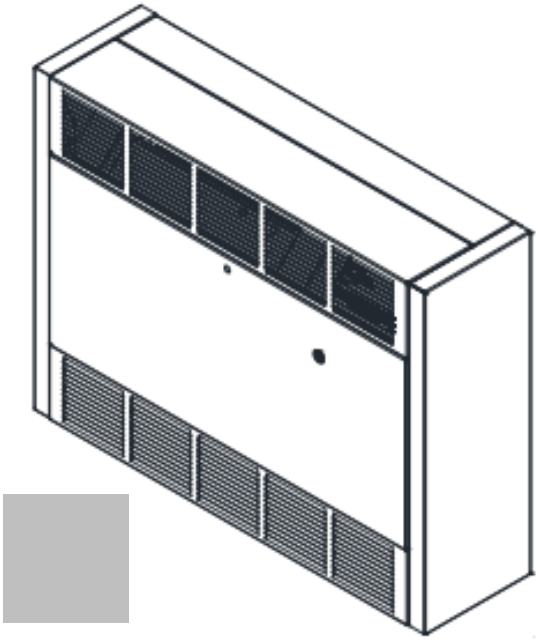
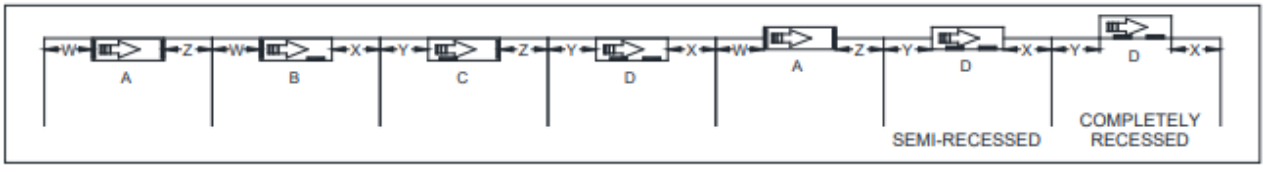
- Heavy 16 gague steel construction
- Fin-Tubular heating elements
- Single or two stage operation
- Automatic and Manual overheat protection
- Centrifugal fan blower with two speed motors
- Multiple intake and exhaust configurations
- Recessed or surface mount in wall or ceiling
- Powder coat paint finish
- Options conist of:
    - Single and two stage thermostats
    - Disconnect
    - Summer fan switch
    - Motor fusing
    - Replacable or washable filters
    - Single and two stage thermostats
    - Duct collars
    - Locking front cover
    - Trim frames for recess mounting
    - Fresh air make-up and kick base



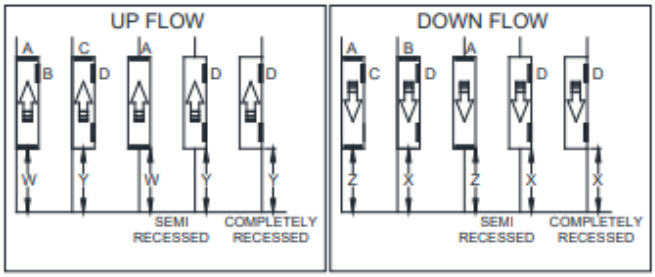
Product Features (2-24KW; All Voltages)

- For commercial and institutional application such as stores, schools, offices, transportation terminals, churches, entrancways.
- Wall or ceiling mount; surface, semi-recessed or fully recessed.
- (8) air inlet and outlet configurations.
- Capacities from 2-24 KW with 230 to 1,000 CFM
- Motors are two speed, shaded pole, resilient mounted, direct drive. High/low heat and blower speed offer versatility.
- ETL Listed.
- Beige powder coated finish
- Choice of eight standard control options include unit or wall mounted 120 or 24V thermostats, with or without built-in control transformers, setback thermostat option
- Industrial type finned tubular elements.
- Easily removable fan and element decks for simplified maintenance.
- Full length thermal protection.
- Limited warranty-one year
- Optional locking front cover.

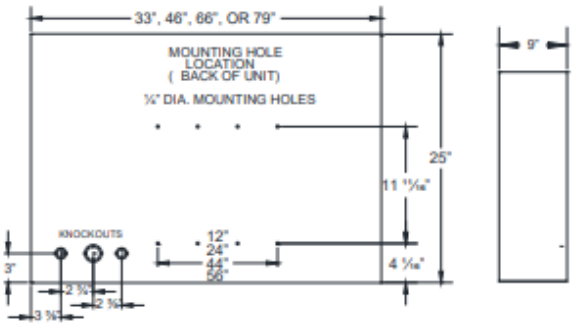
Mounting Configurations



CEILING MOUNTED



WALL MOUNTED



NOTE: Semi-recessed units are to be recessed at a maximum of 3 ½" unless grille configuration is front in and front out.

MOUNTING CLEARANCES: Proper clearances are indicated for each mounting configuration on all positions. Minimum clearance from side of unit to wall is zero inches. Mounting inches are provided in the back of the cabinet, accessible through the blower compartment, if necessary, remove blower deck if additional mounting screws or bolts are desired. Blower deck may be slipped forward by loosening four screws ath the front to provide access to mounting holes.

Product Specifications

The electric cabinet unit heater is designed for mounting in any position, fully recessed, semi-recessed or surface mounted. All capacities, voltages, physical sizes, grille arrangements and options shall be as specified on the plans. All units must be field convertible to the following:

1. For control by a field supplied remote thermostat.
2. Load management control with an external dry switch. When closed unit operates under control of either the internal or the external thermostat. When open, unit turns off.
3. Any grille arrangement.

CABINET & CONSTRUCTION: The cabinet shall be constructed of heavy duty 16 gauge Zinc coated steel. The heater shall have a removable front door for easy access to the control panel, elements, motor-blower assembly, filters and all internal components. The grill configuration must be easily field convertible to any air flow configuration (by removal of no more than four fasteners). The cabinet shall have a textured finish of two coats of powder coat epoxy and be suitable for use with optional kick space base. Made in U.S.A.

HEATING ELEMENTS: The heating elements shall be warranted for 1 year and shall be non-glowing design consisting of special high temperature resistance wire enclosed in an incoloy sheath to which steel fins are furnace brazed. The heating elements shall be located directly in front of the blower discharge air for uniform heating. They shall be mounted with a single anchor at one end to minimize effects of thermal expansion and contraction.

SAFETY CUTOUT: Thermal safety limits shall be built into the system to automatically shut off heater in event of overheating due to any cause. The safety cutouts shall be of two types:

A. The primary limit shall be an automatic capillary type to sense the heat along the full length of the heating elements. It shall deenergize the heaters by opening the coil circuit on the heating contactors.
B. The secondary limit shall be a manual reset thermal device to interrupt power to the heating elements.

MOTOR AND BLOWER ASSEMBLY: The motors and blowers shall be direct drive and resiliently mounted on rigid heavy gauge frame for quiet operation and long life. The motor shall be two-speed, shaded pole type, rated for the voltage (480 to 600 Volts are single speed only). Each shall have built-in automatic reset overload protection and are life time lubricated. The motor shall be vented and mounted in the air stream to provide maximum cooling of the motor.

HIGH AND LOW HEAT RANGES: All units will be supplied as standard with a switch for selecting full heat at high fan speed or reduced heat at low fan speed (On 480 & 600 Volt units the switch changes the heat but not the fan speed). OVER CURRENT PROTECTION: Circuit breakers shall be provided for branch circuit protection where required by NEC. Circuit breakers are optional on all other heaters.

TEMPERATURE CONTROL: Integral factory installed thermostat shall be tamper resistant, linear capillary type. Optional setback thermostat available.

Electric Heated Air Curtain
Data Sheet

For Mounting Heights To 12' (environmental separation)

STANDARD CONSTRUCTION

- 15" high x 26" deep
- ½ hp motor(s) - ten speeds
- Factory installed Intelliswitch digital controller
- White aluminum exterior panel
  (Optional: Custom Color or Stainless)
- Top Mounting only
- High efficiency, low noise Pro-V Nozzle
- Filter (washable)
- Patented venturi open helical element with point suspension
- Alternate kW: see sheet EP-242
- Optional: Berner AIR™ (smart controller & app), includes BACnet

Berner International certifies that the air curtains shown herein are licensed to bear the AMCA Seal. The ratings shown are based on tests and procedures performed in accordance with AMCA Publication 211 and comply with the requirements of the AMCA Certified Ratings Program. Rated data shown is for base (electric heated) units. The AMCA Certified Ratings Seal applies to airflow rate, average outlet velocity, outlet velocity uniformity, velocity projection and power rating at free delivery only.

Enlever le pont entre les bornes "I" & "C" avant de connecter l'entrebarrage, si applicable.
Suivre les codes électriques nationaux et locaux ainsi que les instructions contenues dans l'appareil.
Le serpentin électrique Thermolec est representé par un cadre en gros traits. Tout ce qui est en dehors du cadre est un "filage typique externe fait par d'autres".

IMPORTANT

Remove the jumper between "I" & "C" before connecting interlocks, if applicable.
Wire in accordance with Local Electrical codes. Read instructions carefully before wiring and operating.
Frame shown in heavy line represents Thermolec Electric Coil. All wiring outside this frame are "typical external wiring by others".

Rep:
(Company) (Project Manager)

[redacted] 5 with LGRED° 208-230V ODU

10 Ton Single Frame Heat Pump and Heat Recovery

Performance:

Cooling Mode:

Nominal Capacity (Btu/h)	119,700
Power Input (kW)	7.72

Heating Mode:

Nominal Capacity (Btu/h)	135,000
Power Input (kW)	9.20

Rated capacity is certified under AHRI Standard 1230. Ratings are subject to change without notice. Current certified ratings are available at www.ahridirectory.org.

Electrical:

Frame	ARUM121BTE5
Power Supply (V/Hz/Ø)[1]	208-230/60/3
MOP (A)	40
MCA (A)	30.9
Rated Amps (A)	26.3
Compressor A (A)	18.3
Compressor B (B)	-
Fan (A)	8.0

Piping:[2]

Frame	ARUM121BTE5
Refrigerant Charge (lbs.)	23.2
Liquid (in., O.D.)	1/2 Braze
High Pressure Vapor (Heat Recov only; in, O.D.)	3/4 Braze
Low Pressure Vapor (in., O.D.)	1-1/8 Braze

Standard Features:

- Advanced Smart Load Control
- Intelligent Heating
- HiPOR (High Pressure Oil Return)
- Smart Oil Control
- Night Quiet Operation
- Fault Detection and Diagnosis
- Active Refrigerant Control
- Variable Heat Path Exchanger
- Subcooling and Vapor Injection Control
- Liquid Cooled Inverter Controller
- Advanced Comfort Cooling

Optional Accessories:

☐ Air Guide - ZAGDKA52A
☐ Hail Guard Kit - ZHGDKA52A
☐ Low Ambient Baffle Kit - ZLABKA52A, Control Kit - PRVC2 (1 per system)
☐ Base Pan Heater - ZPLT1A52A

**Cooling range with the Low Ambient Baffle Kit (sold separately) is -9.9°F to +122°F and is achieved only when all indoor units are operating in cooling mode. Does not impact heat recovery system synchronous operating range.

Operating Range:

Cooling (°F DB)**	5 - 122
Heating (°F WB)	-22 - 61
Synchronous	
Cooling Based (°F DB)	14 - 81
Heating Based (°F WB)	14 - 61

Unit Data:

Refrigerant Type	R410A
Refrigerant Control	EEV
Max. Number of Indoor Units[3]	20
Sound Pressure[4] dB(A)	59.0
Weight	
Frame	ARUM121BTE5
Net (lbs.)	507
Shipping (lbs.)	534
Communication Cable (No x AWG)[5]	2 x 18
Heat Exchanger Coating	Black Coated Fin™

Compressor:

Type	HSS DC Scroll
Quantity	1
Oil / Type	PVE / FVC68D

Fan:

Type	Propeller
Quantity	2
Motor Drive	Brushless Digitally Controlled Direct
Air Flow Rate (CFM)	11,300

Notes:

1. Power wiring cable size must comply with the applicable local and national codes. Cables terminate at each frame.
2. For main pipe segment size, refer to the LATS Multi V tree diagram.
3. The combination ratio must be between 50-130%.
4. Sound pressure levels are tested in an anechoic chamber under ISO Standard 3745 for the combination of outdoor units.
5. Communication cable between ODU and IDUs must be 2-conductor, 18 AWG, twisted, stranded, and shielded. Ensure the communication cable shield is properly grounded to the Master ODU chassis only. Do not ground the communication cable at any other point. Wiring must comply with all applicable local and national codes.
6. Acceptable operating voltage: 187V - 253V
7. Low ambient performance with LGRED° heat technology is included in Multi V 5 units produced after February 2019.

Rep:
(Company) (Project Manager)

[redacted]5 with LGRED° 208-230V ODU

8 Ton Single Frame Heat Pump and Heat Recovery

Performance:

Cooling Mode:

Nominal Capacity (Btu/h)	96,000
Power Input (kW)	5.33

Heating Mode:

Nominal Capacity (Btu/h)	108,000
Power Input (kW)	6.74

Rated capacity is certified under AHRI Standard 1230. Ratings are subject to change without notice. Current certified ratings are available at www.ahridirectory.org.

Electrical:

Frame	ARUM096BTE5
Power Supply (V/Hz/Ø)[1]	208-230/60/3
MOP (A)	40
MCA (A)	28.5
Rated Amps (A)	24.4
Compressor A (A)	16.4
Compressor B (B)	-
Fan (A)	8.0

Piping:[2]

Frame	ARUM096BTE5
Refrigerant Charge (lbs.)	23.2
Liquid (in., O.D.)	3/8 Braze
High Pressure Vapor (Heat Recov only; in, O.D.)	3/4 Braze
Low Pressure Vapor (in., O.D.)	7/8 Braze

Standard Features:

- Advanced Smart Load Control
- Intelligent Heating
- HiPOR (High Pressure Oil Return)
- Smart Oil Control
- Night Quiet Operation
- Fault Detection and Diagnosis
- Active Refrigerant Control
- Variable Heat Path Exchanger
- Subcooling and Vapor Injection Control
- Liquid Cooled Inverter Controller
- Advanced Comfort Cooling

Optional Accessories:

☐ Air Guide - ZAGDKA52A
☐ Hail Guard Kit - ZHGDKA52A
☐ Low Ambient Baffle Kit - ZLABKA52A, Control Kit - PRVC2 (1 per system)
☐ Base Pan Heater - ZPLT1A52A

**Cooling range with the Low Ambient Baffle Kit (sold separately) is -9.9°F to +122°F and is achieved only when all indoor units are operating in cooling mode. Does not impact heat recovery system synchronous operating range.

Operating Range:

Cooling (°F DB)**	5 - 122
Heating (°F WB)	-22 - 61
Synchronous	
Cooling Based (°F DB)	14 - 81
Heating Based (°F WB)	14 - 61

Unit Data:

Refrigerant Type	R410A
Refrigerant Control	EEV
Max. Number of Indoor Units[3]	16
Sound Pressure[4] dB(A)	58.0
Weight	
Frame	ARUM096BTE5
Net (lbs.)	507
Shipping (lbs.)	534
Communication Cable (No x AWG)[5]	2 x 18
Heat Exchanger Coating	Black Coated Fin™

Compressor:

Type	HSS DC Scroll
Quantity	1
Oil / Type	PVE / FVC68D

Fan:

Type	Propeller
Quantity	2
Motor Drive	Brushless Digitally Controlled Direct
Air Flow Rate (CFM)	11,300

Notes:

1. Power wiring cable size must comply with the applicable local and national codes. Cables terminate at each frame.
2. For main pipe segment size, refer to the LATS Multi V tree diagram.
3. The combination ratio must be between 50-130%.
4. Sound pressure levels are tested in an anechoic chamber under ISO Standard 3745 for the combination of outdoor units.
5. Communication cable between ODU and IDUs must be 2-conductor, 18 AWG, twisted, stranded, and shielded. Ensure the communication cable shield is properly grounded to the Master ODU chassis only. Do not ground the communication cable at any other point. Wiring must comply with all applicable local and national codes.
6. Acceptable operating voltage: 187V - 253V
7. Low ambient performance with LGRED° heat technology is included in Multi V 5 units produced after February 2019.

For external duct static 0.25” and below, certified AMCA sound data is available.
Manufacturer’s shall provide sound data in accordance to AHRI Standard 260 “Sound Rating of Ducted Air Moving and Conditioning Equipment”.
Data to be collected in an AMCA accredited reverberant Laboratory.

Please note, certified AMCA sound data is available only with 2” MERV 8 filters selected.
Sound data is unavailable when any other type of filter is selected.

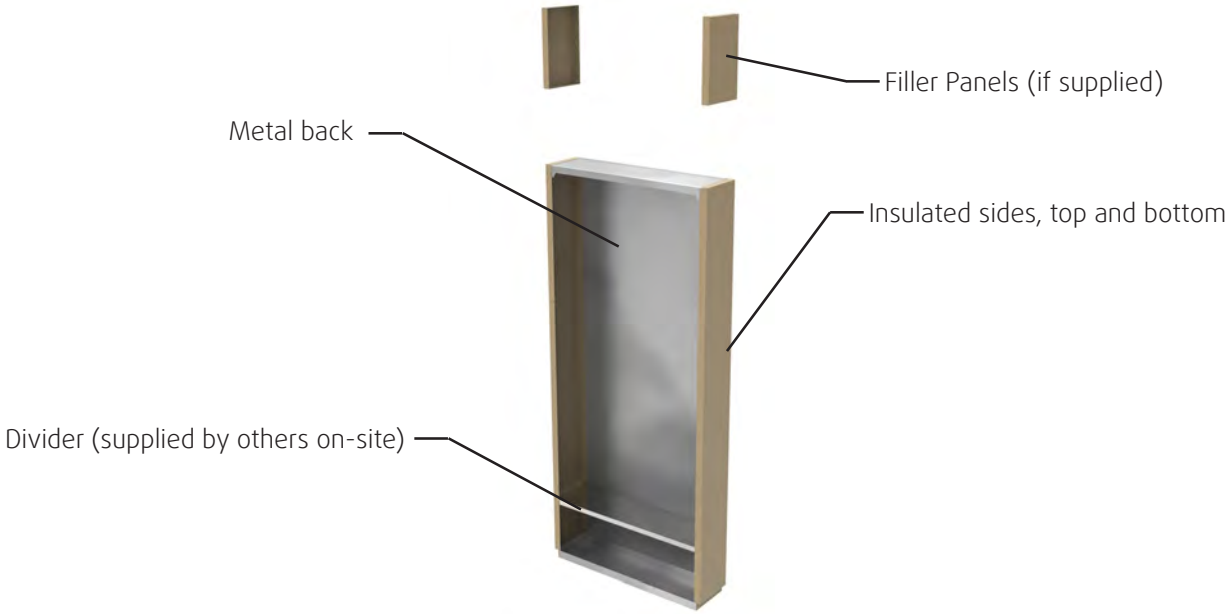
CLASS DRAWING NUMBER | *D-26226O*

Rear Plenum

[redacted] Series Accessory



Standard Features	Options
Width and Height to match unit dimensions	Available Depths - **10" and 14" (6" based on approval)**
Finish will be the same as the unit	Available Colors - **Sand or Grey**
Sides, top and bottom are covered with 1" fiberglass insulation	1" non-fibrous hushcloth insulation
Divider (supplied by others)	
Metal back supplied uninsulated	Same as unit insulation

Design Consideration:

· Rear Plenum Depth will vary depending on unit type, louver size, site conditions and options selected.
· The divider (supplied by others) can take on several design options depending on site conditions.
· The divider in the rear plenum should align perfectly with the divider in the wall sleeve, this must be done on-site making sure that both ends are perfectly aligned to avoid leakage or crossover.
· Filler panels can be supplied if a standard size top duct cover or top plenum are supplied with the unit.
· The openings for the exterior louvers must be cut by others on site.

Our Dedication to Education.

[redacted]

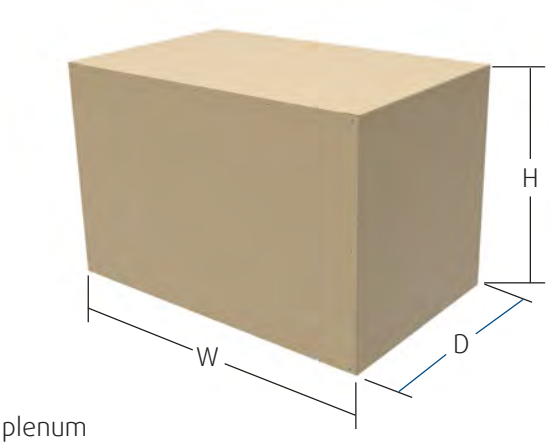
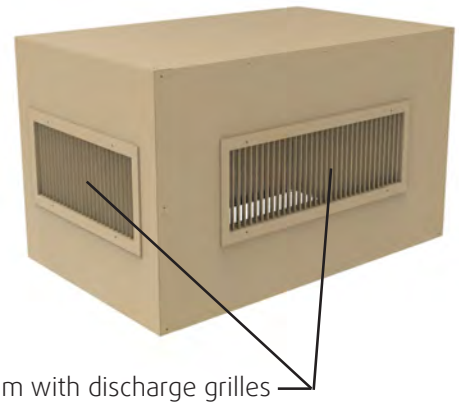
Top Plenum

Series Accessory



Top plenum



Top plenum with discharge grilles

Standard Features	Options
Width and depth to match unit dimensions	Available heights - **16" high or 24" high** (When face discharge grilles are included, the minimum recommended height is 16")
Finish will be the same as the unit	Available Colors - **Sand or Grey**
All 5 walls are covered with 1" fiberglass insulation, to achieve sound deadening and thermal efficiency	1" non-fibrous hushcloth insulation.
If supplied: 3 Double deflective discharge grilles (Painted) Standard sizes: 24" x 8" Front, 18" x 8" Sides	Number of grilles can be (if supplied): Total 3 (1x Front and 2 x Sides) OR Total 2 (1x Front and 1x either Side) OR Total 2 (2x both Sides) *Refer to the CFM limit table for sound implications
Removable front panel for easy access to piping connection and the electrical conduit	

Our Dedication to Education.

Top Plenum

Series Accessory

Design Consideration:
Standard top plenum:
· Openings for discharge plenum cut on-site by others.

Double Deflective discharge grilles (if supplied):
· Minimum 16" overall height recommended (If possible increase the height to help minimize the discharge air sound).
· Placement of the unit centered in the room with front, left and right discharge is preferred for optimal performance.
· A single discharge grille (front or side) is not a recommended option.
· Ensure there are no obstructions that will interfere with the placement of the accessory.
· Special considerations should be given to site conditions.

*** Note: Face discharge grilles shall be selected as recommended in the CFM vs number of grilles table for better sound results. Discharging air into a duct system will reduce air sound transmission on higher volume units.**

	*Sound Implications - CFM vs Number of Grilles in Top Plenum															
CFM	700	800	900	1000	1100	1200	1300	1400	1500	1600	1700	1800	1900	2000	2100	2200

IMPORTANT

Enlever le pont entre les bornes "I" & "C" avant de connecter l'entrebarrage, si applicable.
Suivre les codes électriques nationaux et locaux ainsi que les instructions contenues dans l'appareil.
Le serpentin électrique Thermolec est representé par un cadre en gros traits. Tout ce qui est en dehors du cadre est un "filage typique externe fait par d'autres".

IMPORTANT

Remove the jumper between "I" & "C" before connecting interlocks, if applicable.
Wire in accordance with Local Electrical codes. Read instructions carefully before wiring and operating.
Frame shown in heavy line represents Thermolec Electric Coil. All wiring outside this frame are "typical external wiring by others".

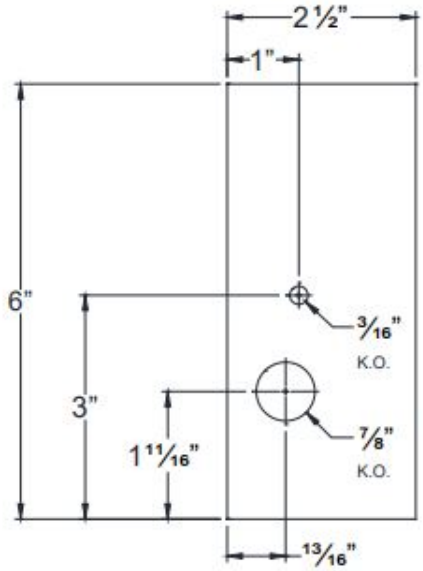
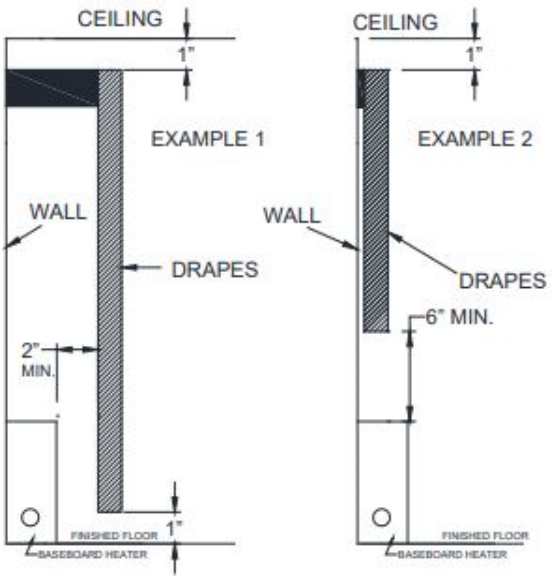
NOTES/SPECIAL INSTRUCTIONS:





- Available in white or ivory with stainless steel heating element and aluminum fins
- Painted 22 gauge steel front with 20 gauge junction boxes located on each end of the heater - juction boxes contain quick connect cable clamps and 6" ground lead wires
- Over-temperature thermal limit extends entire length of heated area
- A full length wireway provided along the back of the heater - enclosed conduit available
- Heater can be mounted to the wall by using the key hole knocouts every 4" at the back of the heater
- Optional in-built thermostats field installed in the junction box
- For high altitude applications, delete the SW in the model number and add HAW
- Height: 6" Depth: 2½"

HOW TO DESIGNATE A MODEL:

M41	25	F	48	1000	T
Series Number	Cabinet Size 45=20"H x 5"D 25=11"H x 4"D	Voltage/Phase G=277V, 1 Phase J=208V, 3 Phase K=240V, 3 Phase F=208V, 1 Phase H=240V, 1 Phase	Unit Length (Inches) 24, 36, 48, 60, or 72	Total Wattage	Control Option Blank=None R, R2, or R9=Relay (See control option chart) T or T2=Thermostat

Product Specifications

CABINET:
4100 series casing shall be of square design with front inlet and outlet grills suitable for recess installation. The cabinet is fabricated from 16 gauge cold rolled steel and finished with powder coated baked enamel. Junction boxes are available for left or right wiring and connected by pre-wired 40 Amp capacity wireway.

ELEMENT:
All steel high mass element construction with Nickel-Chromium resistance wire embedded in compacted efficient dielectric to ensure proper heat transfer. Aluminum fins mechanically bonded to steel tube allows for increased surface area and even heat transfer.

LIMIT CONTROLS:
Automatic reset hydraulic thermal overload covers full length of heating element and shuts down heater when safe operating temperatures are exceeded.

WIRING:
Wiring connections shall be made in left end of cabinet enclosure. Wiring must enter into control enclosure behind perforated steel grill.

CONTROLS:
All controls are accessible only through control enclosure door. Security type fasteners restrict access to controls. Built in thermostat with manual adjustment are located in control enclosure.

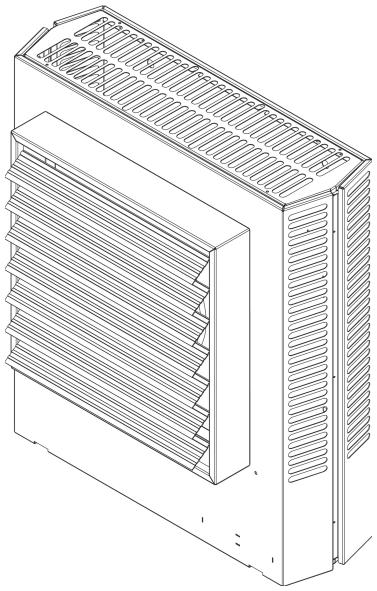
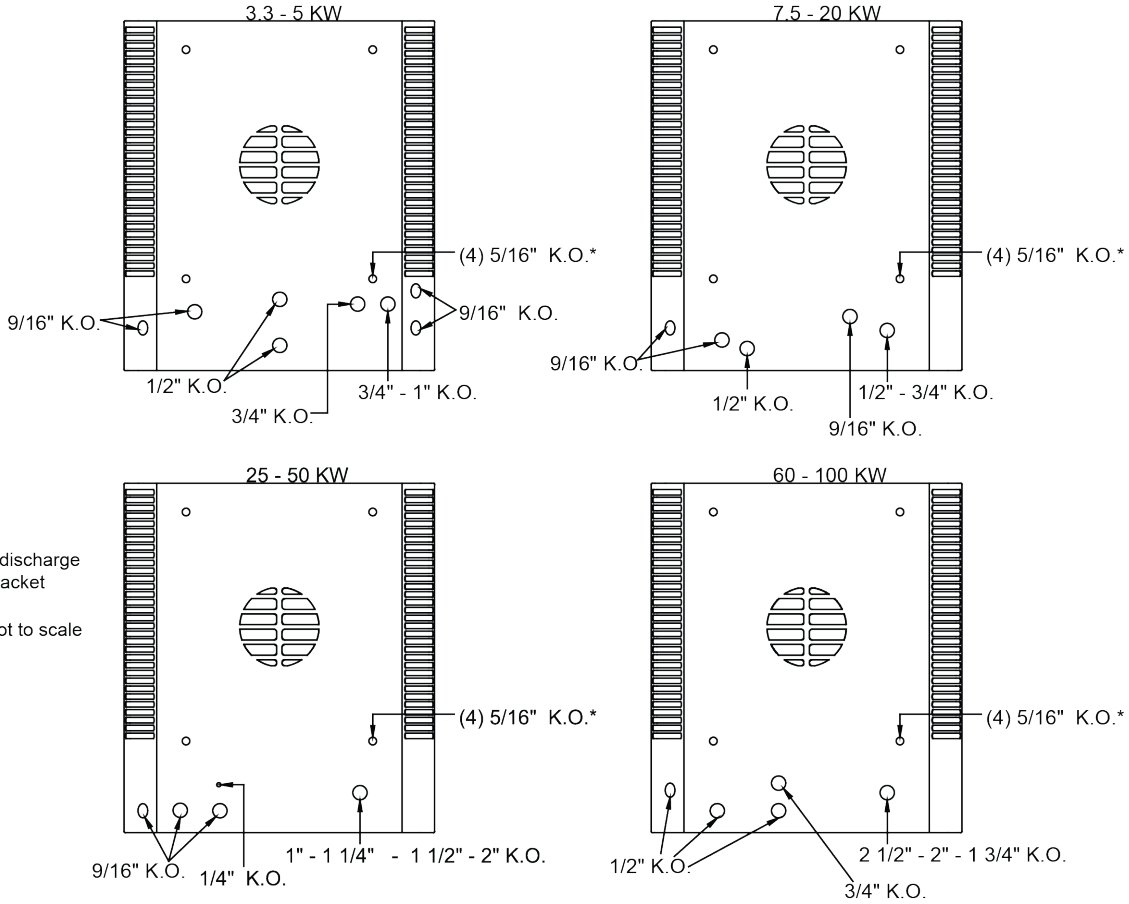
- Heavy 18 gauge steel construction
- Powder coated paint finish
- Copper clad steel sheath element with brazed fins and Nichrome elment wire
- Totally enclosed fan motors
- Louvers are individually adjustable for directional air flow
- Optional remote and unit mounted controls include thermostats, disconnects, and fan swithces
- Optional accessories include mounting brackets, louvers, fan guards, and dust shields





* For vertical discharge mounting bracket

HOW TO DETERMINE A MODEL:

HF	2	B	51	10	C	A	1

Element Volts	Phase	Motor Voltage	Model Series	Element KW	Control System	Transformer	Control Volts
F = 208	1 = 1-Phase	F = 208	51		Blank = None	Blank = None	1 = 24
H = 240	2 = 1 or 3-Ph.	H = 240			C = Contactor	A = Included	2 = 120
HF = 240/208	3 = 3-Phase	B = 240 / 208					(with CA option)
G = 277		G = 277					
P = 480		P = 480					

* 600 Volt units 5KW - 50KW available on special order, consult factory for pricing & availability

Product Specifications

CONSTRUCTION:
Heavy 18 gauge welded steel cabinet with powder coated finish and control compartmen thousing a master terminal board with a hinged and latched access door, simplifying wiring, installation & maintenance.

HEATING ELEMENT:
Copper clad steel sheath element with continuously brazed steel fins formed to allow side draw through air flow.

OVERHEAT PROTECTION:
All units come equipped with automatic reset type limit controls to de-energize the heater should an over-temperature situation occur.

FAN and MOTOR:
Totally enclosed, 1-speed, 1-phase, permanently lubricated, thermally protected motors with unit bearings on 3 KW - 20 KW models. Totally enclosed, 2-speed, 1-phase, permanently lubricated, thermally protected motors with sleeve bearings on 25 KW - 50 KW models. All motors mounted with rubber insulators to minimize vibration & noise. Fan over-ride purges unit of residual heat at shutdown.

LOUVER ASSEMBLY:
Louvers are individually adjustable for directional control of air flow up to 15° from straight horizontal. Optional diffusers available for down flow (vertical discharge) applications

TEMPERATURE CONTROLS:
Optional low voltage and line voltage thermostats available with an adjustable temperature range of 40°F to 110° F. Units with model numbers ending in CA1 are factory wired for low voltage controls. 25 KW through 50 KW units are designed for two stage heating operation.

INSTALLATION:
Unit Heaters can be mounted for horizontal or vertical discharge. Applications up to 6000 Ft. See UH Series above 6000 Ft

FEATURES:
- Made in U.S.A.

FIELD INSTALLED OPTIONS:
- In-unit or wall mounted temperature control thermostats low or line voltage.
- Summer fan switch to operate the fan only.
- Power disconnect switch.
- Heat stratification thermostat.

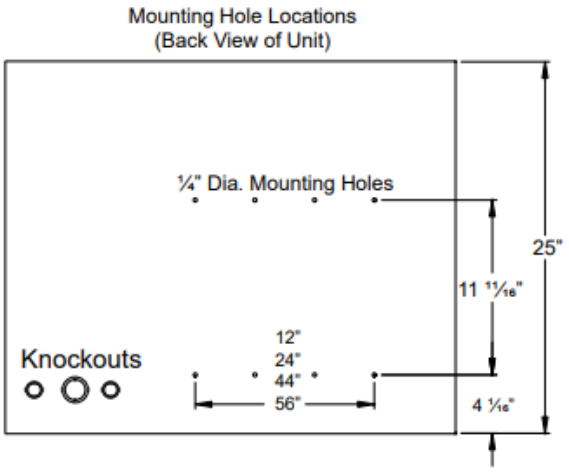
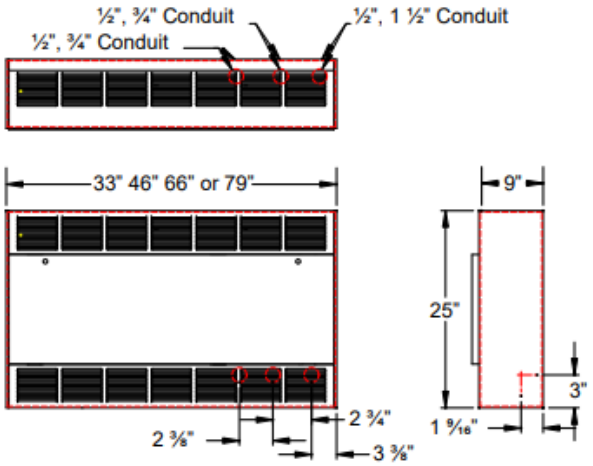
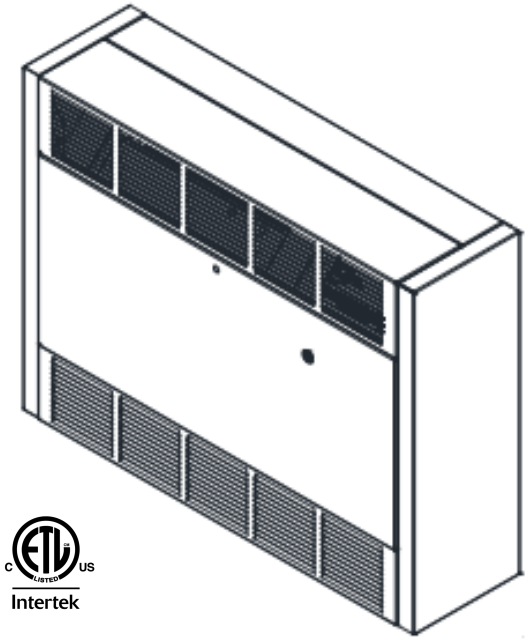
NOTES/SPECIAL INSTRUCTIONS:





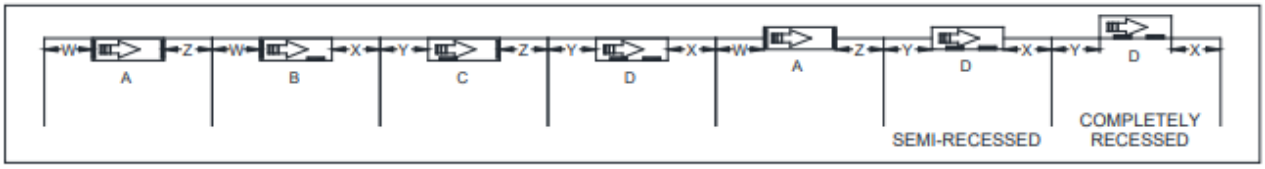
- Heavy 16 gague steel construction
- Fin-Tubular heating elements
- Single or two stage operation
- Automatic and Manual overheat protection
- Centrifugal fan blower with two speed motors
- Multiple intake and exhaust configurations
- Recessed or surface mount in wall or ceiling
- Powder coat paint finish
- Options conist of:
    - Single and two stage thermostats
    - Disconnect
    - Summer fan switch
    - Motor fusing
    - Replacable or washable filters
    - Single and two stage thermostats
    - Duct collars
    - Locking front cover
    - Trim frames for recess mounting
    - Fresh air make-up and kick base



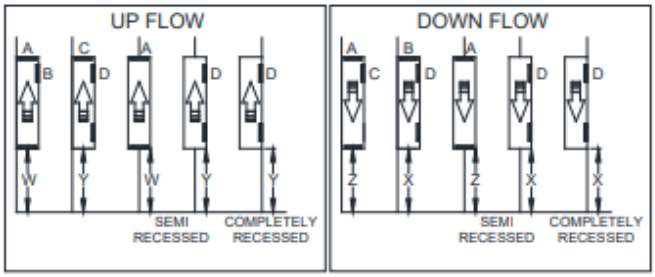
Product Features (2-24KW; All Voltages)

- For commercial and institutional application such as stores, schools, offices, transportation terminals, churches, entrancways.
- Wall or ceiling mount; surface, semi-recessed or fully recessed.
- (8) air inlet and outlet configurations.
- Capacities from 2-24 KW with 230 to 1,000 CFM
- Motors are two speed, shaded pole, resilient mounted, direct drive. High/low heat and blower speed offer versatility.
- ETL Listed.
- Beige powder coated finish
- Choice of eight standard control options include unit or wall mounted 120 or 24V thermostats, with or without built-in control transformers, setback thermostat option
- Industrial type finned tubular elements.
- Easily removable fan and element decks for simplified maintenance.
- Full length thermal protection.
- Limited warranty-one year
- Optional locking front cover.

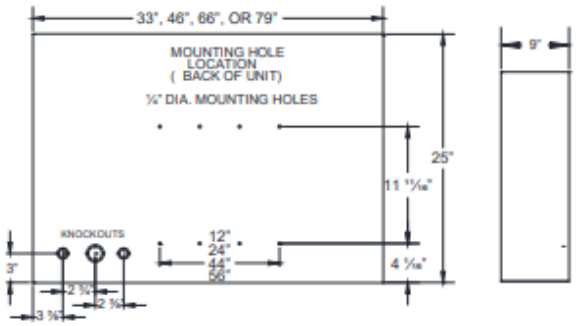
Mounting Configurations



CEILING MOUNTED



WALL MOUNTED



NOTE: Semi-recessed units are to be recessed at a maximum of 3 ½" unless grille configuration is front in and front out.

MOUNTING CLEARANCES: Proper clearances are indicated for each mounting configuration on all positions. Minimum clearance from side of unit to wall is zero inches. Mounting inches are provided in the back of the cabinet, accessible through the blower compartment, if necessary, remove blower deck if additional mounting screws or bolts are desired. Blower deck may be slipped forward by loosening four screws ath the front to provide access to mounting holes.

Product Specifications

The electric cabinet unit heater is designed for mounting in any position, fully recessed, semi-recessed or surface mounted. All capacities, voltages, physical sizes, grille arrangements and options shall be as specified on the plans. All units must be field convertible to the following:

1. For control by a field supplied remote thermostat.
2. Load management control with an external dry switch. When closed unit operates under control of either the internal or the external thermostat. When open, unit turns off.
3. Any grille arrangement.

CABINET & CONSTRUCTION: The cabinet shall be constructed of heavy duty 16 gauge Zinc coated steel. The heater shall have a removable front door for easy access to the control panel, elements, motor-blower assembly, filters and all internal components. The grill configuration must be easily field convertible to any air flow configuration (by removal of no more than four fasteners). The cabinet shall have a textured finish of two coats of powder coat epoxy and be suitable for use with optional kick space base. Made in U.S.A.

HEATING ELEMENTS: The heating elements shall be warranted for 1 year and shall be non-glowing design consisting of special high temperature resistance wire enclosed in an incoloy sheath to which steel fins are furnace brazed. The heating elements shall be located directly in front of the blower discharge air for uniform heating. They shall be mounted with a single anchor at one end to minimize effects of thermal expansion and contraction.

SAFETY CUTOUT: Thermal safety limits shall be built into the system to automatically shut off heater in event of overheating due to any cause. The safety cutouts shall be of two types:

A. The primary limit shall be an automatic capillary type to sense the heat along the full length of the heating elements. It shall deenergize the heaters by opening the coil circuit on the heating contactors.
B. The secondary limit shall be a manual reset thermal device to interrupt power to the heating elements.

MOTOR AND BLOWER ASSEMBLY: The motors and blowers shall be direct drive and resiliently mounted on rigid heavy gauge frame for quiet operation and long life. The motor shall be two-speed, shaded pole type, rated for the voltage (480 to 600 Volts are single speed only). Each shall have built-in automatic reset overload protection and are life time lubricated. The motor shall be vented and mounted in the air stream to provide maximum cooling of the motor.

HIGH AND LOW HEAT RANGES: All units will be supplied as standard with a switch for selecting full heat at high fan speed or reduced heat at low fan speed (On 480 & 600 Volt units the switch changes the heat but not the fan speed). OVER CURRENT PROTECTION: Circuit breakers shall be provided for branch circuit protection where required by NEC. Circuit breakers are optional on all other heaters.

TEMPERATURE CONTROL: Integral factory installed thermostat shall be tamper resistant, linear capillary type. Optional setback thermostat available.

STANDARD CONSTRUCTION

- 15" high x 26" deep
- ½ hp motor(s) - ten speeds
- Factory installed Intelliswitch digital controller
- White aluminum exterior panel
  (Optional: Custom Color or Stainless)
- Top Mounting only
- High efficiency, low noise Pro-V Nozzle
- Filter (washable)
- Patented venturi open helical element with point suspension
- Alternate kW: see sheet EP-242
- Optional: Berner AIR™ (smart controller & app), includes BACnet

Berner International certifies that the air curtains shown herein are licensed to bear the AMCA Seal. The ratings shown are based on tests and procedures performed in accordance with AMCA Publication 211 and comply with the requirements of the AMCA Certified Ratings Program. Rated data shown is for base (electric heated) units. The AMCA Certified Ratings Seal applies to airflow rate, average outlet velocity, outlet velocity uniformity, velocity projection and power rating at free delivery only.

Models ARD12-1060E, ARD12-2108E and ARD12-2120E are not licensed to bear the AMCA seal.

[redacted]

Combination Relative Humidity and Temperature Sensor

Part Number: [redacted]

Description

The space temperature and humidity sensor is designed to work with the MicroTech® III unit controller to measure the space conditions. This device is not a traditional 7-day programmable thermostat. *It does not provide a scheduling function*. However, it does have a tenant override button to force the unit occupied outside of normal scheduled operation.

Application

- **On constant air volume (CAV) and single zone variable air volume (VAV) systems**, acts as control device for heating and cooling operations during occupied and unoccupied times
- **On duct pressure control VAV systems**, acts as control device for unoccupied times but *not* occupied operations

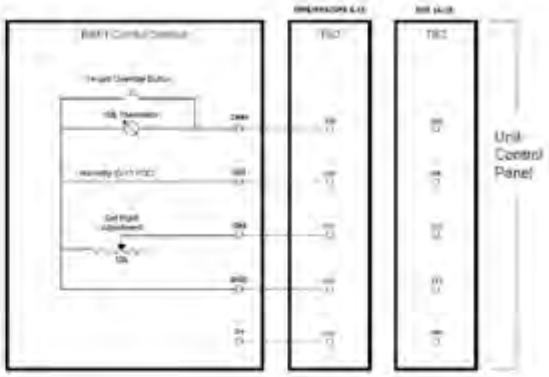
The humidity sensing element is used to enable the dehumidification sequence in the rooftop unit (RTU). This sequence overcools the air to remove moisture and then reheats it to avoid overcooling the space. The RTU must have a valid source of reheat for this feature to be useful. Valid reheat sources include hot gas reheat, liquid subcooling, modulating natural gas heat, or modulating hot water/steam heat. **Staged heating options are not functional in the MicroTech® III for use in dehumidification.**

[redacted]

[redacted]

Instructions

The sensor features a large format LCD display that shows the space temperature and humidity. The display alternates between showing humidity and temperature on a timed interval. Also included are setpoint adjustment keys to increase or decrease the temperature setpoint. Humidity setpoint is not adjustable through this device. Humidity setpoint must be changed through the MicroTech® III. When the adjustment keys are first pressed, the display will show the current reading for the temperature setpoint. Further pressing of these keys will change the setpoint value.



Power	18 to 30 VAC
Power Consumption	50 mA. Max. DC, 1.5 VA max. AC
Ambient	32˚F to 122˚F (1˚C to 50˚C)
	0% to 95% RH, non-cond.
Button Options	Setpoint Up/Down buttons
	Tenant Override button
Wiring	16-22 AWG shielded, 5 wire, stranded

Rebel Rooftop Dehumidification and Hot Gas Reheat

Hot Gas Reheat

Description

Hot gas reheat is a typical feature used to provide dehumidification in many packaged rooftop units. However, the control strategy from one manufacturer to another may differ greatly. The sophisticated controls available with a Microtech® III controlled rooftop unit (Rebel®/Maverick® II/RoofPak®) provides the most effective hot gas reheat control in industry. This control is referred to as "Two Point Dehumidification Control". The two points of control are the Leaving Cooling Coil Temperature Sensor (LCT) and the unit Discharge Air Temperature sensor (DAT). When a call for dehumidification is made the rooftop unit begins to control the compressors to a temperature setpoint for the LCT and the modulating hot gas reheat coil begins controlling to the DAT setpoint. This is illustrated in Figure 1.

Figure 1: Two point dehumidification

Table 1 is a psychrometric chart of two point dehumidification. During the dehumidification process the cooling coil will be saturated with water. This means the air leaving the coil is also very close to its saturation point. Therefore, the LCT control point for compressors brings the air to desired humidity ratio, and the sensible reheat from the reheat coil brings the air to the desired temperature. The precise control of both temperature and humidity make this the most effective method of hot gas reheat control.

Table 1: Psychometric chart of two point dehumidification

Space Sensor with Tenant Override & Setpoint Adjustment

Part Number: [redacted]

Description

The space temperature sensor is designed to work with the MicroTech® III unit controller and is a Type 2, 10k Ohm thermistor used to measure the space conditions. This device does not have scheduling capability. The sensor can be used on either constant air volume (CAV) or variable air volume (VAV) applications.

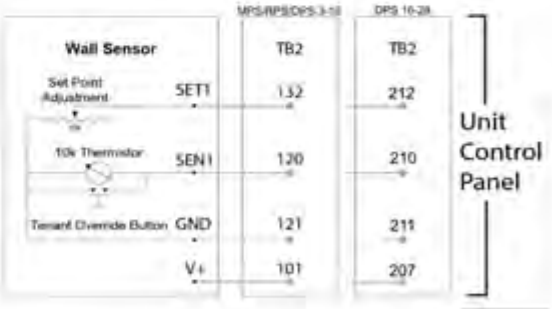
Application

- **On CAV systems**, acts as the control device for the heating and cooling operations for occupied and unoccupied time periods
- **On VAV systems**, not traditionally used as control device but used for unoccupied heating and cooling space sensor

Instructions

The sensor features a large format LCD display that senses the space temperature and shows the space temperature. It also has the setpoint adjustment keys to increase or decrease the setpoint. When the adjustment keys are first pressed, the display will show the current reading for the setpoint. Further pressing of these keys will change the setpoint value. The sensor also has a tenant override button. Pressing this will initiate the tenant override sequence at the MicroTech III controller, placing the unit into occupied mode for a preset (adjustable) amount of time.

Note: Shield wire is grounded at MicroTech III only



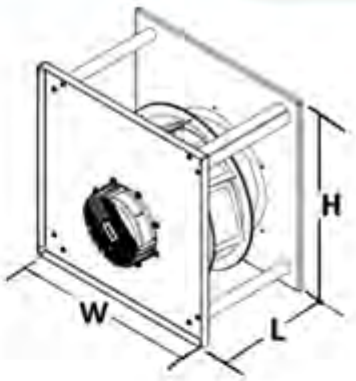
Specifications

Power	15 to 28 VAC [924 VAC nominal]
Power consumption	0.17 VA maximum AC
Wiring	18-22 AWG, shielded, stranded, 4 wire
Display	LCD – 3.5 digits @ 0.6 inch H
	Temperature display units – 0.1°F/C increments
	Set points in 0.5° steps
Button options	Set points up/down buttons
	Tenant override buttons
Environmental ambient	Temperature 32° to 122°F (0-50°)
	Humidity 0 to 95% RH, non-condensing
Material	ABS plastic, UL94V-0

[redacted]

[redacted]

[redacted] Electronically Commutated Motor (ECM) Fan



Description

[redacted] Supply and Exhaust fans utilize a direct drive Electronically Commutated Motor (ECM) fans.

Features

The ECM fans have low vibration, low noise, and have the same if not higher efficiency than motors with Variable Frequency Drives (VFDs). Direct drive design means no belt maintenance.

Dimensions

Fan Size	(L)	(W)	(H)	Motor HP
12"	11.12	16.54	16.54	1.3
14"	12.86	16.54	16.54	2.3
16"	14.27	18.12	18.12	4.0
18"	15.5	25.2	25.2	4.0
22"	18.03	25.2	25.2	4.0 or 8.0

[redacted]

Energy Wheel Filtration

Description

All [redacted] rooftop units with energy recovery wheels are factory provided with 2" MERV 8 filters on entering exhaust to the wheel and entering outside air to the wheel. An example of this is shown in the image below.

CSD-00179-00 (Jun-18)

[redacted]

VFD MD4

Description

The MD4 family of drives was designed to meet variable torque applications (pump & fan application) requirements. The MD4 AC Drive features a control panel that can be mounted on the cover of the drive or remotely. The control panel has capabilities to upload and download drive configuration parameters as well as an optional real-time clock, startup, maintenance and diagnostic assistants. The MD4 is also programmable in English & 14 other languages.

Each MD4 drive comes equipped with an extensive library of pre-programmed HVAC application macros which, at a touch of a button, allow rapid configuration of inputs, outputs, and performance parameters for specific HVAC applications to maximize convenience and minimize startup time. The MD4 series can handle the most demanding commercial applications in an efficient, dependable, and economic manner.

Features

- UL, cUL labeled and CE marked
- EMI/RFI Filter (2nd Environment, Restricted Distribution)
- Start-up assistants
- Maintenance assistants
- Diagnostic assistants
- Real time clock
  - Includes day, date and time
- Operator panel parameter backup (read/write)
- Full graphic and multilingual display
- Two (2) programmable analog inputs
- Five (5) programmable digital inputs
- One (1) programmable analog output
- One (1) programmable relay output
  - 3 more relay outputs available as an option (mrel-01)
- Adjustable filters on analog inputs and outputs
- Mathematical functions on analog reference signals
- All control inputs isolated from ground and power
- Input speed signals
  - Current 0 (4) to 20 ma
  - Voltage 0 (2) to 10 vdc

Input Connection	
Input voltage (U1, V1, W1)	208/220/230/240Vac 1-phase +/-10%, (2.4 to 9.8 A)
	208/220/230/240Vac 3-phase +/-10%, (2.6 to 50.8 A)
	380/400/415/440/460/480Vac 3-phase +/-10% (1.2 to 44 A)
Output Connection	
Output voltage	0 to U1, 3-phase symmetrical, Umax at the field weakening point
Output frequency	0 to 500 Hz
Frequency resolution	0.01 Hz
Continuous current	I_{IN} Continuous rms input current (for dimensioning cables and fuses) at ambient temperature of +40°C
	I_{LD} Continuous output current at maximum ambient temperature of +50°C. 10% overloadability for one minute every ten minutes
	I_{2N} Maximum continuous output current at ambient temperature of +40°C. No overloadability, derating 1% for every additional 1°C up to +50°C
	I_{2MAX} Maximum instantaneous output current. Available two seconds every ten minute at start up or as long as allowed by the drive temperature
	P_N Typical motor power. The kilowatt ratings apply to most IEC 4-pole motors. The horsepower ratings apply to most NEMA 4-pole motors
	R0...R4 ACS310 is manufactured in frame sizes R0…R4. Some instructions and other information that only concern certain frame sizes are marked with the symbol of the frame size (R0…R4)
Ambient Conditions, Operation	
Air temperature:	Indoor Vision®, Destiny® and SWT—5.0°F to 104°F (-15°C to 40°C), above 40°C the maximum output current is derated 1% for every additional 1°C (up to 50°C (122°F)) maximum limit.
Relative humidity:	Indoor Vision, Destiny and SWT—5 to 95%, no condensation allowed, maximum relative humidity is 60% in the presence of corrosive gasses
Temperature and Relative Humidity on RoofPak®, Maverick®, Rebel® and Skyline® Outdoor units	The VFD is mounted in a ventilated enclosure and will operate within the units submitted operating envelope.
Analog Inputs	
Two (2) programmable analog inputs	
Current reference	
Unipolar	0 (4) to 20 mA, Rin= 100 Ohm
Bipolar	-20 mA to 20 mA, Rin= 100 Ohm
Voltage reference	
Unipolar	0 (2) to 10 V, Rin > 312 kOhm
Bipolar	-10 V to 10 V, Rin > 312 kOhm
Resolution	0.1%
Accuracy	+/-1%

Reference Power Supply	
Voltage	+10 VDC, +/-1% at 25oC (77°F)
Maximum load	10 mA
Applicable potentiometer	1 kOhm to 10 kOhm
Analog Outputs	
One (1) Programmable Current Output	
Signal Level	0 (4) to 20 mA
Accuracy	+/-3% Full Scale Range at 25°C (77°F)
Maximum load impedance	500 Ohms
Digital Inputs	
Five (5) programmable digital inputs	
Signal level	12-24 VDC, with internal or external supply
Type	PNP and NPN
Input current	15 mA at 24 VDC
Input update time	8 ms, +/- 1ms
Frequency input	Pulse Train 0 to 16 KHz (X1A:16 only)
Internal 24 VDC supply for digital inputs	
Voltage	24 VDC, +/- 10%
Maximum current	200 mA
Relay Outputs	
One (1) programmable relay output	
Digital Outputs	
One (1) programmable digital output	
EIA-485 Interface (Embedded Fieldbus)	
Embedded fieldbus protocol	Modbus RTU EIA-485
	Johnson Controls N2
	Siemens Building Technology FLN (P1)
	BACnet (MS/TP)
Protections	
Single phase	Input protected
Overvoltage trip limit	1.3 * Input voltage
Undervoltage trip limit	0.65 * Input voltage
Overtemperature	Protected
Auxiliary voltage	Short circuit protected
Microprocessor fault	Protected
Motor stall protection	Protected
Motor overtemperature	Protected (I^2t)

[redacted]

Outside Air Mist Eliminator

Description

This is the first item in the outdoor airstream in the [redacted] and [redacted] units. The main functions of this component are to prevent moisture infiltration from the outdoor airstream as well as prevent entrance into the unit by foreign objects and animals.

Media Construction

The filter media element consists of two layers of corrugated aluminum screen mesh and an expanded aluminum retainer/faceguard. The filter media is completely enclosed in a durable, one-piece aluminum U-channel frame, closed at one corner with pop rivets.

[redacted]

[redacted] DDC Controller

Description

[redacted] DDC control systems provide constant volume, variable air volume, 100% outside air, and/or dehumidification control flexibility. In addition to providing stable, efficient temperature, and static pressure control, the controller is capable of providing comprehensive diagnostics, alarm monitoring, and alarm specific component shutdown if critical equipment conditions occur. The unit controllers are factory mounted and configured for stand-alone operation or integration with a building automation system (BAS) through an optional communication module with our Open Choices® feature.

Benefits

The MicroTech III provides easy, low-cost integration into most building automation systems without costly gateway panels.

- Flexibility to select either BACnet® or LONWORKS® communication. Units are LonMark® 3.4 certified with the appropriate communications module for LONWORKS networks.
- Comprehensive unit control and status information is available at the BAS regardless of communication protocol.
- Long-term choices for equipment additions or replacements, and for service support.
- Flexible alarm notification and prioritization with Intrinsic Alarm Management (BACnet).
- Simplified BAS integration with the ability to set network parameters at the unit controller, reducing installation time and costs.
- Easy monitoring and troubleshooting of communication status from the unit controller to the BAS.

Control Board (MCB)

The main control board (MCB) contains a microprocessor that is preprogrammed with the software necessary to control the unit. This ensures that schedules, setpoints, and parameters are not lost, even during a long-term power outage. The microprocessor board processes system input data and then determines and controls output responses. An RS-232 communication port is provided as standard to allow for direct or modem access with a PC-based service tool.

Features

Each system is equipped with a complete MicroTech III unit control system that is pre-engineered, pre-programmed, and factory tested prior to shipment. Each MicroTech III unit control system is composed of several components that are individually replaceable for ease of service. These components include:

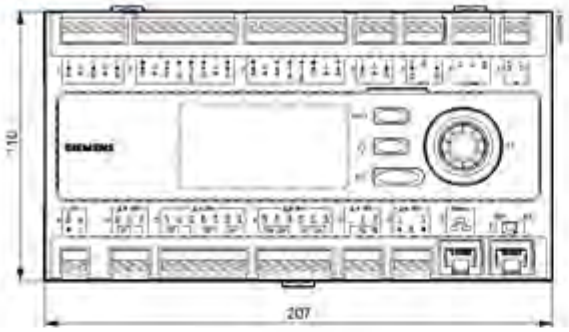
- Unit controller with user interface display and navigation wheel
- Optional expansion modules
- Communication module (optional)
- Pressure transducers (optional)
- Unit-mounted temperature sensors
- Zone temperature sensor packages (optional)
- Humidity sensor (optional)
- SD card interface for application and operating system upgrade

Expansion Modules

These boards are used to expand the input and output capability of the unit controller. Each board communicates via serial data communications. These microprocessor-based boards provide independent operation and alarm response even if communication is lost with the unit controller.

[redacted]

Dimensions



Specifications

Operating voltage	AC 24 V ±20%; DC 24 V ±10%
Frequency	45 – 65 Hz
Power consumption	Approximately 15 VA (without extension modules)
Max. AC current without extension modules	1.8 A @ AC 24 V
Max. DC current without extension modules	1.0 A @ DC 24 V
Max. current for extension modules	2.2 A @ AC 24 V 3.0 A @ DC 24 V
Max. external supply line fusing	10 A slow wire fuse or circuit breaker
Environmental Conditions	
Operation	IES 60721-3-3 class 3K5
Temperature	-40 to 70°C
Restriction LCD	-20 to 60°C
Restriction process bus	-25 to 70°C
Humidity	<90% r.h. (non-condensing)
Atmospheric pressure	Min. 700 hPa, corresponding to max. 3,000 m above sea level
Transport	IEC 60721-3-2 class 2K3/2K4
Temperature	-40 to 70°C
Humidity	<95% r.h. (non-condensing)
Mechanical conditions	IEC 60721-3-2 class 2M2

[redacted]

Phase Voltage Monitor for [redacted]

Description

Phase Voltage Monitors used in Rooftop equipment are safety devices to protect your unit from harmful Voltage Variations. In the event of a phase failure, the phase voltage monitor will not only cut the power to the unit, but will also indicate what type of failure it was to assist in diagnosing the problem. A phase voltage monitor comes standard with any DPS with energy recovery, and is selectable for a unit without.

Applications

Works with any voltage on any DPS, regardless of the field connection.

Comes factory mounted and configured for your unit

	LED STATUS	STATUS
GREEN		NORMAL/ RELAY ON
GREEN		RESTART DELAY
RED		REVERSAL
RED		LOSS/ UNBALANCE
RED		UNDERVOLTAGE
RED		OVERVOLTAGE

Specifications

- Protection against phase loss, phase reversal, phase unbalance, undervoltage, overvoltage, and rapid cycling
- Retains fault indication and continues monitoring all voltage even with a lost phase
- Full fault indication on top of unit for easy troubleshooting

Appendix E:

Electrical Service Calculations

April 11, 2022

Re: [redacted] – Electrification Study

To whomever it may concern:

We considered the option of using a 480/277V electric service. This scheme will be as follows:

- Electric service will be rated for 3000Amps 480/277V 3-phase using eight (8) sets of 4#500MCM conductors in 3' conduit
- Electric service will terminate on a 3000Amp 480/277V service end box/CT cabinet
- This will feed a 3000Amp main service switch
- A 15KVA 480V-208/120V delta wye step down transformer will also be tapped from the CT cabinet to energize the fire alarm system.
- Fire pump will be tapped from the C/T cabinet
- A 3000Amp 480/277V 3 phase 4-wire main switchboard will be energized from the main service switch mentioned above.
- A 500KVA 480V-208/120V delta wye step down transformer will be energized from a 600Amp switch in the main switchboard above.
- A 1600Amp 208/120V 3 phase 4-wire low voltage distribution board will be energized from the secondary side of the step down transformer mentioned above.
- All major mechanical loads and lighting loads will be energized from the main switchboard mentioned above.
- All receptacle and low voltage system loads such as PA, intrusion alarm, auxiliary bell system, fire rescue intercom system, and small exhaust fans will be energized from the low voltage switchboard mentioned above.

The Pros of using a 480/277V over a 208/120V service will include the following:

- Fewer set of incoming service conductors due to higher voltage and lower current
- Lower ampere rating for all service equipment
- Smaller feeders for Mechanical units due to higher voltage and lower current.
- Fewer number of circuits for lighting, since each 20 Amp circuit can accommodate more lighting load at 277V.
- Switchboard with less ampere rating

- Less space usage for physically smaller switchboard
- Less space usage for physically smaller mechanical unit feeders

The Cons of using a 480/277V over a 208/120V service will include the following:

- Addition of Two (2) transformers: One rated for 15KVA to step down the voltage to 120/208V for fire alarm system tap and another rated for 500KVA to step down the voltage for the proposed low voltage switchboard energizing receptacles, low voltage system and small mechanical loads.
- Extra space requirement for transformers: A typical Square D 500KVA transformer dimension is 6.25' H X 3.15'W X 4.17' L and the typical Square D 15KVA transformer dimension is 2.25'H X 1.71' W X 1.44'L. This space is available in the electrical room per the SCA 60% design drawings.
- Cooling requirement for transformers: The room containing the transformers will require supplemental cooling to keep the transformer in good working condition.
- Extra point of failure: If the transformer fails, it will take out all building loads connected to it.

According to the design engineer, Con Edison has ruled that 480/277V is not available on the street, therefore we are basing our design on a 208/120V service.

Thanks
