								LEED® Equivalent Point Total [7]:				51	out of	95

SCA Credit Name :
- Letter prefix indicates credit section (S, W, E, M, Q, R, A)
- First number indicates the category within the section
- Second number indicates the specific credit within the section category
- Suffix "R" is added for credits that are required of all projects

1 Projects required to achieve all "feasible" credits that are possible for a particular project.
2 Projects may only pursue optional "Additional" section credits with permission from SCA unless otherwise noted.
3 During GSG submission phases, enter anticipated design and construction credits, keeping the Checklist current.
4 A maximum total value of four (4) points is allowed between these six low-emitting material credits (Q3.1, 3.2, 3.3, 3.4; A5.1, 5.2)
5 RPC incentive regional credits as indicated. If the referenced credit is achieved, then the associated RPC can be claimed.
6 This credit requires project-specific energy modeling and can not be achieved by use of proto-typical modeling.
7 LL86/05 requires Certified LEED® 2009 for Schools or equivalent of a no-less stringent rating system - Minimum 40-49 Points

NP: To be consistent with LEED®, the NYC GSG assigns no point value to credits based on prerequisites or non-LEED® credits.
NYC GSG: Requires that all credits be attempted and proof through calcuation for those which are not-feasible.

Please note: In response to comment about redundant specifications, sections 02270, 02302, and 02303 have been removed from the specs as that information is already covered in the 02200 section.

Site Credits

Site Selection

S 1.1R **Construction Activity Pollution Prevention**

Since the site is greater than 1 acre (110,789 sf), the Design team will provide the Erosion and Sedimentation Control plan. During construction of the proposed school the contractors will be responsible for maintaining the erosion and sediment control measures. This would include installing along the entire perimeter of the site a silt fence with straw bales. Along access points to the site a stabilized driveway consisting of gravel or stone will be constructed. Any drains that remain active onsite will be protected with filter fabric.

Please see attached erosion and sedimentation control plan (Drawing C-004)

S 1.2R **Site Selection** **NARRATIVE AT SCHEMATIC SUBM.**

The project will meet the following requirements:

- Project is located on a previously developed site and therefore the flood plain requirements are not relevant.
- Richmond County which is coextensive with Staten Island is habitat for the following endangered species according to the New York Natural Heritage Program: Fence Lizard, Least Bittern, Northern Cricket, Northern Harrier, Peregrine Falcon, Pied-billed Grebe, Short-eared Owl, and Upland Sandpiper; and Shortnose sturgeon according to the Department of Fish and Wildlife (Federal). However a map from the New York Natural Heritage Program Enviromapper of the project site and surrounding area demonstrates that there are no known rare plants or animals nearby. In addition, project submitted a request to the New York Natural Heritage Program to determine if the land is identified as habitat for any species on the Federal or State endangered species list per SCA guidance. Historical records demonstrate that the following plants and animals were documented in the vicinity of the project site at one time, but have not been documented there since 1979 or earlier and their current status is unknown: Dragonflies and Damselflies.
- The Project is not located within 100 feet on any wetlands and thus will meet this requirement.
- Site was previously developed and site is not within 50 feet of a water body and will comply with the credit requirements. The project has included the reference documentation from the US Fish and Wildlife Service website on the presence of several threatened and endangered species in New York County,

New York, however since the project is not located within 50 feet of such, the credit requirements will be met.

- Project land was not parkland prior to acquisition.

S 1.3 **Sustainable Site & Building Layout** **NARRATIVE AT SCHEMATIC SUBM.**

Project is required to perform at least 3 of the following analyses.

- **Orient and compose the building to take advantage of natural daylighting**
- **Plot shadow patterns from surrounding buildings onto project site to optimize access to daylight.**
- **Plot shadow patterns from proposed building on adjacent properties and consider options to address impact as necessary.**
- **Consider prevailing winds when determining the site and building layout.**
- **Take advantage of existing building and natural land formations and vegetation to provide shelter from extreme weather or to deflect unwanted noise.**
- **Design landscaping to mitigate solar gain and winter winds.**
- **Identify locations on the roof for potential renewable energy generation.**

The project performed the following 3 analyses of sustainable design factors:

Analysis 1:
Orient and compose building to take advantage of natural daylighting:

The building's massing is arranged to create as much exposure to daylight as possible in the following ways:

1. The building is oriented around a large interior courtyard on the south side of the building. This form insures that the rooms adjacent to the courtyard receive ample sunlight, especially during the morning and midday hours when school is in session.
2. The tallest volume on the site is an L-shaped bar that creates the building's north and west perimeters. Because the assembly volumes located to the east are lower in height, this classroom bar will receive the most sunlight during school hours.
3. The majority of the classrooms are located on the top three floors of the building.
4. The "special" program places such as the library, art classroom, and music classroom are located on the top level along the north side of the building and face the large open playground. These rooms, in particular the library, will have taller windows.

Refer to updated shadow studies for building massing.

Analysis 2:
Plot shadow patterns from surrounding buildings onto project site to optimize access to daylight.

Analysis 3:
Plot shadow patterns from proposed building on adjacent properties and consider options to address impact as necessary.
Refer to the shadow studies taken at the 9:00 AM, 12:00 PM, and 3:00 PM on the spring/fall equinoxes and the summer and winter solstices.

Analysis 4:
Consider prevailing winds when determining the site and building layout.

Analysis 5: Take advantage of existing adjacent building and natural land formations and vegetation to provide shelter from extreme weather or to deflect unwanted noise:

Analysis 6:
Design landscaping to mitigate solar gain and winter winds.

Analysis 7:
Identify locations on the roof(s) for potential renewable energy generation:

Refer to the roof plan for identified locations for potential renewable energy installations.

S 1.4 **Development Density & Community Connectivity** **NARRATIVE AT SCHEMATIC SUBM.**

The project aims to comply with OPTION 1 of this credit, Community Connectivity.

The project can demonstrate compliance with pedestrian access to at least 10 basic services within ½ mile radius.

Additionally there are at least 10 dwelling units per acre as evidenced by the supporting documentation which shows an average of 10.5 dwelling units/area in the sampling of the specified lots.

S 1.5R **Joint Use of Facilities,** Community Access **NARRATIVE AT SCHEMATIC SUBM.**

The design will incorporate appropriate entrances for possible community use of school facilities such as the gymnatorium and gym. The gymnatorium and gymnasium are grouped in a common wing on the first floor and are accessible via a wide corridor stemming from the main lobby. The location of these rooms allows for community use while closing them off from the rest of the school if desired.

See attached plan indicating location and pathway to publicly accessible gymnatorium and gym.

S 1.6R **Environmental Site Assessment** **NARRATIVE AT SCHEMATIC SUBM.**

Both a Phase I and Phase II Environmental Site Assessment have been conducted. The Phase I ESAs identified several on-site recognized environmental conditions (RECs). Based on the results of the Phase II ESI, the 10,000-gallon, the 550-gallon UST and the suspect UST would be removed along with any impacted soils. As a preventative measure, a soil vapor barrier and a sub slab depressurization system would also be installed below the building to prevent any soil vapor intrusion into the proposed school building. Any suspect mold, ACM, LBP, lead-core doors, and PCB-containing materials affected by the preparation of the Site for use as a public school would be identified and properly managed during construction activities. For areas of the Site where exposed soils may exist (i.e., landscaped areas), a twenty-four (24) inch thick layer of environmentally clean fill would be placed over the soils. Documentation will be provided at that time to prove that safe levels of contamination have been achieved.

Applicable SCA Standard Specifications include:
02010, 02200, 02220, 02221, and 15880

See attached drawing demonstrating soil vapor barrier and sub-slab depressurization system (H-101).

S 1.7 **Brownfield Redevelopment** **NARRATIVE AT SCHEMATIC SUBM.**

The SCA Committee advises that as if building demolition is a separate design package this credit cannot be achieved as part of new building project. Although the final survey reports for 1050 Targee Street, prepared by New York Environmental & Material Testing Laboratories, documents the presence of asbestos and PCBs this

Transportation

S 2.1 **Alternative Transportation**, Public Transportation Access **NARRATIVE AT SCHEMATIC SUBM.**

The project is located within 1/4 mile of several stops for two or more public bus lines usable by building occupants (distance is calculated along pedestrian routes, not bird's eye distance).

- The TARGEE St. at Doctors Hospital stop is located on the northeast corner of the site on Targee Street and 3 lines (S74, S84, S86) depart from this location.

- The RICHMOND RD at SPRING ST stop is located on the west side of the site on Richmond Road and 3 lines (S74, S84, S8) depart from this location.

S 2.2 **Alternative Transportation**, Bicycle Storage & Changing Rooms **NARRATIVE AT SCHEMATIC SUBM.**

The project design incorporates secure bicycle storage and changing rooms. The bicycle storage will be provided within the building and on the site and will accommodate at least 5% of all building staff and students above third grade. The shower and changing facilities in the building will accommodate 0.5% of Full-time equivalent (FTE) staff.

Unadjusted Student Capacity above 3rd grade	=	956-356	=	600
Full-time Staff (1 staff per 25 occupants)	=	956/25	=	39
Part-time Staff (1 FTE per 200 occupants)	=	956/200	=	5
Visitors (1 FTE per 500 occupants)	=	956/500	=	2
Total Occupants	=			646

Total Bike spaces (5% of # shown above)	=	646 x .05	=	34 spaces

The size of the bicycle storage room located on the building interior is mandated by SCA Design Requirement 1.3.1.12, whereby new buildings shall have on interior bicycle parking space for every 10,000 SF of floor area.

Interior Bike Storage Spaces (Floor area/10,000)	=	110,593/10,000	=	11
Interior Bike Storage Area Req'd (15 SF/bike space)	=	11 x 15	=	min. 165 SF
Interior Bike Storage Area Provided	=	226 SF/15	=	15 spaces
Exterior Bike spaces required	=	34 - 15	=	19
Exterior Bike spaces provided	=	(2) 7' racks (9 bikes/rack) + (1) 5' rack (7 bikes/rack)		
	=	25		
Total Bike spaces provided	=	15 interior + 25 exterior		
	=	40		

Therefore, a 226 SF bicycle storage is located in the cellar level immediately adjacent to the entry stair and the elevators. The exterior bicycle racks located across from the school's main entry provide space for 25 bikes to accommodate at least 5% of building staff and students above third grade. The unisex toilet, shower and changing area is 123 SF and is also located in the basement level near the interior bicycle storage.

See the attached plan highlighting bicycle storage, changing room locations, and distances.

S 2.3R **Alternative Transportation**, Fuel-Efficient Vehicles/Parking **NARRATIVE AT SCHEMATIC SUBM.**

Per zoning regulation 25-31, the project is not required to provide any parking spaces. However, the project will provide 10 parking spaces for school use and 5% of those parking spaces (at least 1 space) will be designated for alternative and fuel efficient vehicles. The parking spaces are located in the northwest corner of the site, adjacent to the bus drop-off road that cuts across the site from west to east.

See the attached signage and striping plan indicating space reserved for low-emitting vehicles.

Minimize Impact on Site

S 3.1 **Site Development**, Protect or Restore Habitat **NARRATIVE AT SCHEMATIC SUBM.**

As currently designed, the project will not be able to comply with the requirements of this credit due to constraints of the site area. The credit guidelines require the project to restore or protect a minimum of 50% of the site area excluding building footprint or 20% of the total site area including building footprint, whichever is greater, with native or adapted vegetation. For this project, the greater requirement is to provide planting for 50% of the site area excluding building footprint which is 36,354 SF. This requirement is not possible based on the site program. Currently, the site only contains approximately 22,000 SF (below 50%) of planted area.

Site area	=	110,789 SF	
Building Footprint	=	38,081 SF	
Site area minus building footprint	=	110,789-38,081	= 72,708 SF
50% of the site area minus building footprint	=	72,708 x 0.50	= 36,354 SF
20% of total site area	=	110789 x 0.20	= 22,158 SF

The SCA committee agrees that this credit is not feasible and will not be pursued.

S 3.2 **Site Development**, Maximize Open Space **NARRATIVE AT SCHEMATIC SUBM.**

The site area is 110,789 SF. In the R3-2 zoning area, 65% of the site must be considered open space (zoning 23-141). Since the building covers 38,081 SF, 65% of the site is left as open space.

Given that the project site is 110,789 SF and the footprint is 38,081 SF, this leaves 72,708 SF of remaining site area. The credit guidelines require the project to include 20% or 14,541 SF of open space.

Site area	=	110,789 SF	
Building Footprint	=	38,081 SF	
Site area minus building footprint	=	110,789-38,081	= 72,708 SF
20% of total site area	=	72,708 x 0.20	= 14,541 SF

Currently, the project is providing approximately 22,000 SF of vegetated space. Complying with this credit using open space is attainable.

Stormwater Design

S 4.1 **Stormwater Design**, Quality Control

This credit is not applicable because the project does not have a separate storm and sewer system and is not discharging to a 303(d) listed water body. This credit will not be pursued per SCA committee direction.

S 5.1R **Heat Island Effect**, Roof

The project will pursue the credit using SRI-compliant roofing materials. The project will use roofing materials having a Solar Reflectance Index (SRI) equal or greater than 79 for low-sloped roofs and 29 for steep sloped roofs, for 100% of the non-mechanical roof surface.

Roof area:
Low-sloped roofs (<2:12)= 27,411 sf
Steep-sloped roofs (>2:12)= 6,760 sf
Total Roof Area = 34,171 sf
75% of roof surface = 34,171 x .75 = 25,628 SF

Roof pavers; SRI>79= 27,411 sf
Standing Seam Metal Roof; SRI>29= 6,760 sf
Compliant Roof Areas= 34,171 sf

34,171/34,171 = 100% compliant

Please see specification sections 07560 for Fluid-Applied Protected Membrane Roofing (minimum SRI of 79) and 07610 Sheet Metal Roofing (minimum SRI of 29). Section 07560 was updated to reflect the SRI value in the bid documents (11/29/10). See section 2.01.L. Section 07610 includes the SRI in section 2.01.B.5.

Outdoor Lighting

S 6.1R **Light Pollution Reduction**

The project will minimize light trespass from the building and site and reduce the development impact on the local nocturnal environment. The project will comply with the credit requirements of S 6.1R for Interior and Exterior Lighting. Exterior lighting will be provided at the following locations:

a. All entrances, exits and walkways including exit discharge to maintain 5.0 FC average.
b. Building perimeter to maintain 1.0 FC average to a 20 ft. depth.
c. Site playground to maintain 0.5 FC average.

The interior lighting requirements for this credit will be met by turning off, automatically, all non emergency lighting systems during non-school hours. An after-hours override will be provided by an occupant-sensing device with manual override provided that the override last no more than 30 minutes. The lighting design will include the systems required to achieve this operation automatically (Programmable Lighting Control Panels).

The exterior lighting requirement of the credit will be met by designing building mounted fixtures in addition that do not exceed a maximum initial luminance at the boundary as indicated above. Lighting power densities shall not exceed ASHRAE/IESNA Standard 90.1-2007 (with errata but without addenda) for the classified zone. Exterior lighting control requirements from ASHRAE/IESNA Standard 90.1-2007, Section 9, table 9.4.5, Exterior Lighting Section, without amendments will be met.

The Design Team assumes that the site is characterized under Lighting Zone Designation – LZ2 (Low) and will meet the prescriptive requirements for the LZ2 zone. Exterior lighting will be designed so that all site and building mounted luminaries will produce a maximum initial luminance value no greater than 0.10 horizontal and vertical foot-candles at the site boundary and no greater than 0.01 horizontal foot-candles 10 feet beyond the site. The project's exterior lighting fixtures will be selected so that no more than 2% of the total initial designed exterior lighting fixture lumens are emitted at an angle of 90 degrees or higher from nadir (straight down).

In reference to the SCA comment about metal halide fixture, the Metal Halide Lighting Fixtures used on playground and courtyard are not emergency powered. No Metal Halide Lighting Fixtures are being used for security Lighting nor Perimeter Lighting.

See attached drawings:
Light Pollution Reduction Forms A &B

Applicable SCA Design Requirements include:
7.2.1 Interior Lighting
7.2.5 Exterior/Site/Security Lighting

Applicable SCA Standard Specifications include:
16145 Lighting Control
16500 Interior Building Lighting
16501 Lamps, Ballasts, and Accessories
16520 Exit Sign Lights and Emergency Lighting Fixtures and Systems
16530 Site/Security Lighting

Water Credits

Outdoor Systems

W 1.1R **Water Efficient Landscaping**, Reduce by 50%

Native or adapted plant types that are drought tolerant will be used throughout the site. The current estimated planting area is approximately 22,000 square feet which is approximately 20% of the 110,789 sf site, meeting the requirement of providing planting for a minimum of 5% of the building site area.

The team has provided calculations indicating how potable water is reduced by 66.33% and a listing of the native and adapted plant species (See attached).

Please see attached memo indicating moisture requirements and drought tolerance for plants included in the 60% submission. Literature for each plant species has also been provided.

Applicable SCA Standard Specifications include:
02900 Landscaping (revised and reissued 2/1//11)

W 1.2 **Water Efficient Landscaping**, No Potable Use or No Irrigation

The project will use no permanent irrigation (path 2). Native or adapted plant types that are drought tolerant will be used throughout the site. The current estimated planting area is approximately 22,000 square feet which is approximately 20% of the 110,789 sf site. The current site design achieves WE1.2R without the use of permanent irrigation as a result of the native and adaptive draught tolerant plants selected for use. However, due to the large size of the project site, it is necessary to secure supplemental watering services (i.e., watering truck) during the period of establishment (first year) for the survival of the plants.

Requirements for temporary irrigation through the use of a watering truck during the first-year period of establishment are included as part of the Contractors requirements in specification 02900. Section 02900 was revised in Pre-Bid Addendum 5 and issued on 2/11/11.

Applicable SCA Standard Specifications include:
02900 Landscaping

Indoor Systems

W 2.1R **Water Use Reduction**, 20% Reduction

Compliance with this credit will be achieved with the implementation of all New York City SCA Standard Specifications and Plumbing Design Requirements for dual flushometer toilets, high water efficiency urinals, low water flow shower heads, and aerated metered faucets.

Please see attached water use reduction form indicating a combined 33% savings (school in full operation and summer operation). Please note that section 15440 has also been updated to meet compliance with the 2009 Green Schools Guide.

Applicable SCA Standards include:
SS 15440 Plumbing Fixtures

W 2.2R **Water Use Reduction**, 30% Reduction

See credit W2.1R above.

W 2.3R **Water Use Reduction**, 35% Reduction

Based on the updated water use reduction calculations, the revised savings of 33% will not qualify for this credit and therefore it will not be pursued.

W 2.4 **Water Use Reduction**, 40% Reduction

Based on the updated water use reduction calculations, the revised savings of 33% will not qualify for this credit and therefore it will not be pursued.

Energy

Commissioning

E 1.1R **Fundamental Commissioning of the Building Energy Systems**

The project will meet the credit requirements as per specification sections 01650, 01660 and other references throughout the specs. The SCA commissioning department will be performing the commissioning for the project. The updated commissioning matrix for this project has been included with the submission. Section 02400 is not included in either the SCA standard specifications or the project specifications and therefore was not included in the matrix. Please reference the commissioning matrix for details.

Applicable SCA Standards include:
SS 01650 Facility Start-up, Demonstration, and Training
SS 01660 Commissioning

E 1.2R **Enhanced Commissioning**

The project will meet the credit requirements as per specification sections 01650, 01660 and other references throughout the specs. The SCA commissioning department will be performing the commissioning for the project. The commissioning matrix for this project has been included with the submission. Please reference the commissioning matrix for details.

Applicable SCA Standards include:
SS 01650 Facility Start-up, Demonstration, and Training
SS 01660 Commissioning

Refrigerant Management

E 2.1R **Fundamental Refrigerant Management**

The project meets the requirements for this credit. All new refrigerants in this building are non-cfc based.

The central air conditioning system for the new building will consist of a chiller that utilizes 410A and rooftop units that utilize refrigerant R-410A.

E 2.2 **Enhanced Refrigerant Management**

The project will not comply with Enhanced Refrigerant credit requirements. The total weighted average atmospheric impact produced through completing the Refrigerant Impact Form is 107.

Refrigerant Impact form is included with this submission.

Verification

E 3.1R **Measurement & Verification**

The BMS System for the school will measure/monitor gas, normal electrical power, and chilled water plus the electrical power consumption by lighting panels, chilled water pumps, hot water pumps, air handling units, and fans larger than 5 HP as outlined in Specification sections 15970, 15973 and 15985.

Additionally the project has been designed to meet the SCA design requirements of section 6.2.20 Building Management Control System/ Direct Digital Control BMS/ DDC Measurement and Verification Plan. DVL provided responses to all outstanding FMSI comments and incorporated them into the Bid set.

E 3.2R **Energy Management System Controls,** HVAC and Hot Water

The building will be provided with a Building Management System (BMS) that will be connected to the NYC DOE Wide Area Intranet Network (WAN). The project will include the SCA Standard BMS System. This connection allows complete monitoring and control of the school's MEP system from both the local BMS station in the Custodian's Office as well as the DOE central monitoring and controls station located at 44-46 Vernon Blvd., Long Island City, NY.

Please see revised RTU BMS schedules attached.

Applicable SCA Standards include:
SS 15970 Temperature Control Systems
SS 15973 Facility Management Systems
SS 15985 Sequence of Operations

Energy Efficiency

E 4.1R Minimum Energy Performance

The design complies with the mandatory provisions of ASHRAE 90.1 2007 Sections 5.4, 6.4, 7.4, 8.4, 9.4, and 10.4 (without addenda).

The project was directed by the SCA to provide specific modeling. The model demonstrates a 10.9% improvement in the proposed building performance rating compared to the baseline building performance rating per AHSRAE/IESNA Standard 90.1-2007 (with errata but without addenda) by a whole building project simulation using the Building performance Rating Method in Appendix G of the Standard.

The proposed design includes the following energy efficient measures:

- Reduced lighting power density (1.0 w/ft^2 vs 1.2 W/ft^2)
- Occupancy Sensors in classrooms
- CO2 ventilation controls in gymnasium and gymnatorium instead of just in gymnatorium
- Heat recovery wheels on all RTU's
- High efficiency DX units (EER = 10.9 instead of 9.8)
- High efficiency air-cooled chiller (EER = 13.2 instead of 9.5)
- 87% efficient condensing boiler with modulating flame controls instead of 80% efficient boiler with on/off controls
- Dedicated outdoor air system and unit ventilators reduce required fan power

Outdoor air will be provided to the corridors and classrooms via constant volume RTU's. The CV RTU's will temper the outdoor air via 80% efficient, modulating gas furnaces and DX cooling.

Recirculating unit ventilators will provide additional heating and cooling to the classrooms. 87% efficient, condensing boilers will provide hot water to the unit ventilators, and supplemental heating system (staircases, storages, etc.). An air-cooled chiller will provide chilled water to the unit ventilators.

Heating and cooling will be provided to the assembly spaces (cafeteria, gymnasium, and gymatorium) via constant volume DX units with modulating flame natural gas furnaces.

For lighting, occupancy motion sensors will be provided for control of lights in classrooms and offices, and the power densities for lighting layouts will be designed to comply with the New York City SCA Electrical Design Requirement 7.2.1.

A report has been included that details the Proposed Design compared to the ASHRAE 90.1-2004 Energy Cost Budget Method. There is a 21.6% energy cost savings over the ASHRAE 90.1-2004 ECB baseline (23.9% for regulated loads only). The local law 86 form indicating compliance with ASHRAE 90.1-2004 is attached.

The large discrepancy in savings between the two cases is attributed to the significantly different requirements of the two baselines. ASHRAE 90.1-2007 has much more stringent requirements than the older version

ASHRAE 90.1-2004, particularly for the building envelope and HVAC equipment efficiencies. Therefore the ASHRAE 90.1-2004 ECB method is a comparatively worse baseline, and the percentage annual energy savings is much larger.

The results of Target Finder will be provided at the 100% submission per direction from the SCA.

Section 08920 – Curtain Walls has been updated to reflect a U-value of 0.51 in Addendum No. 6 (issued April 19, 2011). In addition, the rates for the model are to be provided by the SCA at the start of the model. Otherwise, the latest rates from NYPA are utilized.

With regards to the inconsistencies with DR 1.1.5.2, the updated form has been used and the fenestration area has been checked and the energy model report revised to match the reported 25%. Please also note that the report mentions total conditioned area of the project, as opposed to the total gross area reported in DR 1.1.5.2. Furthermore, the auditorium schedules have been removed from the report, as they are no longer used. Please see table from DR 1.1.5.2 for Saving and Non-Energy Saving Spaces for this project:

DR 1.1.5.2 Building Areas-Energy Saving and Non-Energy Saving Spaces - Fenestration %

Space name	Energy Saving Program Space SF	*Non-energy saving Program Space SF*	Comment
All instructional spaces including classrooms, art rooms, music rooms, science lab and demo rooms, resource rooms, special ed Cr's, D75 classrooms	34,804		
All offices including custodian office, government and club publication office, guidance offices, SBST office, Nurses office, staff work rooms, supervisory office	5,753		
Auditorium including orchestra area, stage/platform area. Exclude chair storage rooms, storage rms, coat/ticket room, projection room	0		
Auditorium related coat ticket room, projection room		*80*	
All physical education rooms including Aux Gymnasium, exercise rooms, dance classrooms, weight lifting rooms	513		
All storage rooms including, AV/Comp cart stoarge rooms, AV storage, book storage rooms, custodian storage room, chair storage room, furniture storage room, ground equipment storage room, gymnasium storage, refuse and recycling storage, roof equipment storage room, Bicycle storage, Fire pump room		*5,606*	
Cafeteria	4,448		
Custodial locker rooms, Custodian work area, custodian workshop		*654*	
Field House excluding field house storage space	0		
Field house storage space		*0*	
Gymnasiums, Gymatoriums. Exclude Gym storage, chair storage rooms	10,371		Double Height
kitchen help locker rooms, food and non-food storage		*845*	
Kitchen-excluding kitchen storage and walk-in refrigerator/freezer area	1,851		
Library excluding AV storage	2,502		
Lobby		*835*	
Multipurpose room	0		
School safety administration office	367		
Staff lunch room, staff cafeteria	489

Telecom closets-MDF and IDF rooms		*458*	
Toilets and showers within locker rooms-including toilets/shower in custodial locker rooms, student locker rooms/showers.	2,468		

Total - Energy Saving Program **spaces**	64,646	
*Total - Non-energy saving program **spaces***		8,478
Actual Gross area of Building(this may be/maynot be the same as the gross area in the POR)		110,306
Total exterior wall area: Sum of wall areas for all floors. Wall area= perimeter X thickness of exterior wall. Typ wall thickness = distance between exterior face of brick and interior face of gypbd.		6,206
Total - Non-energy saving core areas	*39,454*	
Energy saving program:non-energy saving core ratio	62.10	*37.90*
Percentage of fenestration to Façade Area	*25%*	
Percentage of 'Assembly Spaces' to gross building area	9%	

The following SCA Design Requirements apply to this credit:

6.2.0 General Overview of Heating Ventilation and Air Conditioning Systems
6.2.3 Non-Assembly Spaces
6.2.4 Public Assembly Spaces
6.2.9 Convectors and Enclosures
6.2.20 Building Management Control System/DDC Control BMS
7.2.1 Interior Lighting
7.2.5 Exterior/Site/Security Lighting

The following SCA Standard Specifications apply to this credit:

15517 Water Treatment Hydronic Systems
15540 HVAC Pumps
15565 Condensing Boilers
15781 Packaged Htg & Cooling Units
15783 Packaged Heat Pump System
15853 Custom Packaged Rooftop Heating and Cooling Units (Variable Air Volume System)
15854 Custom Packaged Rooftop Heating and Cooling Units (Constant Volume System)
15855 Commercial Packaged Rooftop Heating and Cooling Units
15930 Variable Air Terminals
15970 Temperature Control System (LonWorks BMS/DDC with School Operating Console)
15973 Facility Management Systems Integration
15985 Sequence of Operations
16145 Lighting Control Devices
16500 Interior Building Lighting

HVAC Optimization

E 4.2R **HVAC System Sizing,** Avoid Oversizing

HVAC components shall be designed such that they are correctly matched to loads to preclude unnecessary oversizing and to ensure energy efficient operation. Systems should not be sized so tightly that there is no allowance for degradation of equipment.

Systems shall be sized and configured to efficiently handle peak and design load conditions, but more importantly to operate in an energy-efficient manner during a wide range of partial load conditions, which are the operating ranges that HVAC systems handle most of the time.

The RTU load and Boiler load calculations are attached. The calculations have been updated to reflect the slab to slab areas.

The following SCA Design Requirements apply to this credit:
6.2.9 Heating and Cooling Design Parameters (Load Calculations)
6.2.13 Arrangement and Sizing of Equipment

The following SCA Standard Specifications apply to this credit:
15540 HVAC Pumps
15565 Condensing Boilers
15781 Packaged Heating and Cooling Units
15783 Split Heat Pump System
15852 Air Handling Units
15853 Custom Packaged Rooftop Heating and Cooling Units (Variable Air Volume System)
15854 Custom Packaged Rooftop Heating and Cooling Units (Constant Volume System)
15855 Commercial packaged Rooftop Heating and Cooling Units

Green Power
E 5.1R **Green Power**

The project will provide at least 35% of its electricity from renewable sources by engaging in at least a two-year renewable energy contract. The allocation of green power was calculated using the annual electricity consumption from the project-specific energy model of 769,177 kWh whereas 35% of the buildings electricity is 269,212 kWh. Please see updated LL86 reflecting these values.

Materials Credits

Efficient Material Use
M 1.1R **Storage & Collection of Recyclables**

The project will comply with the requirements of this credit. The project will provide easily accessible and centralized areas for the recycling of paper, corrugated cardboard, glass, plastic and metal with sufficient space for collection bins, compactors and balers. Additionally these materials will be collected with bins placed throughout the spaces. The cafeteria will have designated bins for recycling. The refuse and recycling room (186 sf) is adjacent to the kitchen and will provide the final holding place for recyclable materials before they are removed from the building.

Based on the SCA F&E Unit standard furniture list:
- The cafeteria includes a recycling station.
- Each classroom has recycling containers

Specification 11172 for Waste Handling Equipment has been edited for this project to include a vertical trash compactor in the bid set.

Please see attached plan indicating the recycling areas for the project (226 sf).
The following SCA Design Requirements apply to this credit:

DR 1.3.1.2 Building Organization-Space Relationships
DR 1.3.1.8 Refuse and Recycling Storage
DR 1.3.5.01 Cafeterias PK-8 and HS

The following SCA Standard Specifications apply to this credit:

11172 Waste Handling Equipment

M 1.2 **Building Reuse**, Maintain 75% of Existing Walls, Floors & Roof

The credit is not applicable to the project, as the existing structures located on the project site will be demolished.

M 1.3 **Building Reuse**, Maintain 95% of Existing Walls, Floors & Roof

The credit is not applicable to the project, as the existing structures located on the project site will be demolished.

M 1.4 **Building Reuse**, Maintain 50% of Interior Non-Structural Elements

The credit is not applicable to the project, as the existing structures located on the project site will be demolished.

M 1.5R **Construction Waste Management**, Divert 50% from Disposal

The project intends to meet the credit requirements outlined in Section S01524. The project has targeted meeting the 50% diversion threshold. The Construction Manager will be required to implement measures to ensure the 50% threshold for recycled waste. The construction manager will create a construction waste management plan and will track percentage of material diverted from landfill and incineration throughout construction.

M 1.6 **Construction Waste Management**, Divert 75% from Disposal

The project anticipates meeting the 75% threshold. Refer to credit M 1.5R above.

M 1.7 **Construction Waste Management**, Divert 95% from Disposal

The project anticipates meeting the 95% threshold. Refer to credit M 1.5R above.

Sustainable Materials

M 2.1R **Recycled Content**, 10% (post-consumer + ½ pre-consumer)

The project specifications include language for recycled content for materials. The project will follow the SCA standards which are included in sections S01352, 02200, 02799, 02870, 03300, 04200, 05120, , 5300, 05710, 07211, 07212, 07250, 07560, 07610, 08524, 08920, 09260, 09310, 09410, 09510, 09650, 09680, 10151, and 10185. The project will track recycled content percentages and material costs throughout construction through the submittal process. The project anticipates meeting the 10% credit threshold.

M 2.2 **Recycled Content**, 20% (post-consumer + ½ pre-consumer)

The project anticipates meeting the 20% threshold. Refer to credit M 2.1R above.

M 2.3 **Regional Materials**, 10% Extracted, Processed & Manuf. Regionally

The project specifications include language for regional materials. The project will follow the SCA standards which are included in sections S01352, 02200, 02900, 03300, 04200, 04435, 05120, 05210, 05300, 07212, 07250, 07610, 09260, 09310,and 09751. The project will track regional material percentages and material costs throughout construction through the submittal process. The project anticipates meeting the 10% threshold.

M 2.4 **Regional Materials**, 20% Extracted, Processed & Manuf. Regionally

The project anticipates meeting the 20% threshold. Refer to credit M 2.3 above.

M 2.5R **Wallboard & Roof Deck Products,** Mold Resistance

The project specifications include language which specifies mold resistant wallboard products. The project will follow the SCA standards which are included in section S01352, 06100, 07212, 09260, and 09900. The project Architect, Kliment Halsband, will specify and the project will purchase compliant applicable materials at the building envelope. The project will track materials throughout construction and will comply with credit requirements.

M 2.6R **Low-Mercury Lighting,** Reduce Mercury Waste

The new lighting fixtures for the school will be specified with low mercury content in compliance with New York City SCA standard specification 16501 for low mercury lamps, which was updated in the bid documents to include the number of spare lamps required for the project. The project will comply with credit requirements.

Indoor Environmental Quality Credits

IAQ Post-occupancy

Q 1.1R **Minimum IAQ Performance / Increased Ventilation**

The ventilation system will be designed to provide 30% more outdoor air ventilation than the ASHRAE Standard 62.1-2007 requirements, with the exception of the cafeteria area. For that space, the ventilation system will comply with the minimum ASHRAE 62.1-2007 requirements, which exceed DOB ventilation rates.
The following SCA Design Requirements apply to this credit:

The Ventilation calculations are submitted as part of this 60% CD Submission.

6.2.0 General Overview of Heating Ventilation and Air Conditioning Systems
6.2.9 Heating and Cooling Design Parameters (Load Calculations)
6.2.1 HVAC Unit Centralization and Coordination
6.2.3 Non-Assembly Spaces (Classrooms, Offices, etc).
6.2.4 Public Assembly Spaces

The following SCA Standard Specifications are applicable:

S01550 Indoor Air Quality Requirements
15852 Air Handling Units
15853 Custom Packaged Rooftop Heating and Cooling Units (Variable Air Volume System)
15854 Custom Packaged Rooftop Heating and Cooling Units (Constant Volume System)
15985 Sequence of Operations
15992 Cleaning and Testing
15993 Balancing of Systems

Note: Outdoor air quality analysis is provided by SCA/IEH as noted in the Best Practices and Implementation section of this credit in the Green Schools Guide.

Q 1.2R **Air Flow Stations,** Outside Air Intakes

The new central ventilation system (rooftop HVAC units) will be provided with air flow measuring stations at the outside air intakes in order to measure/monitor the outside air supplied to the school. Data for outside air measurement will be available for verification at the school level through the BMS system schools operating console in the Custodian's Office or through the DOE centralized host control station for Automatic Temperature Control of Schools in NYC.

The following SCA Design Requirements apply to this credit:

6.2.0 General Overview of Heating Ventilation and Air Conditioning Systems
6.2.1 HVAC Unit Centralization and Coordination
6.2.3 Non-Assembly Spaces (Classrooms, Offices, etc).
6.2.4 Public Assembly Spaces
6.2.9 Heating and Cooling Design Parameters (Load Calculations)

The following SCA Standard Specifications are applicable:

15970 Temperature Control System (LonWorks BMS/DDC with School Operating Console)

15985 Sequence of Operations

IAQ Pre-occupancy

Q 2.1R **Construction IAQ Management Plan**, During Construction

The following SCA Standard Specifications are applicable:

S01550 IAQ Requirements
S01560 Installation Sequence of Finish Materials

The SCA specification Section S01550, Indoor Air Quality Requirements, requires development and implementation of and Indoor Air Quality Plan consistent with the credit intent and requirements. Section S01560 Installation Sequence of Finish Materials, requires the Contractor to avoid contamination of absorptive materials. The contractor will be responsible for certifying IAQ Management Plan has been upheld during construction.

The construction of the new school will follow the Sheet Metal and Air Conditioning Contractors National Association (SMACNA) IAQ Guidelines for Occupied Buildings under Construction, 2nd Edition 2007, ANSI/SMACNA 008-2008 (Chapter 3).

Q 2.2R **Construction IAQ Management Plan**, Before Occupancy

The contractor will be required to operate the new central ventilation system for the new school until all areas of the school receive 3500 cubic feet of outside air per square feet maintaining an internal temperature higher than 60°F DB and relative humidity no higher than 60%. The volume of outside and indoor temperature and humidity conditions will be monitored by the BMS system. Once the School is occupied, the central ventilation units will continue operating at the maximum of 0.30 cu.ft. per minute per square foot of outside air or that is required by code, until all spaces of the school receive a total 14,000 cubic feet of outside air per square feet as determined by the BMS air flow tracking system. After complying with this requirement, all ventilation systems will operate in normal mode.

Applicable SCA Standards include:
SS 01550 – Indoor Air Quality Requirements

Low-Emitting Materials

Q 3.1R **Low-Emitting Materials**, Adhesives & Sealants

All adhesives and sealants required for the project will be in compliance with VOC limits established by New York State as well as rule #1168 of the South Coast Air Quality Management District (SCAQMD) and the Green Seal Standard for Commercial Adhesives GS-36 requirements. Project will track adhesives and sealants throughout construction and confirm compliance. Project will comply with the credit requirements as per specification sections G01600, 07900, 09680, 15401, and 15440.

Q 3.2R **Low-Emitting Materials**, Paints & Coatings

All paints and coatings required for the project will be in compliance with VOC limits established by New York State as well as rule #1113 of the South Coast Air Quality Management District (SCAQMD), the Green Seal Standard for GS-11, GS- 03 requirements. Project will track adhesives and sealants throughout construction and confirm compliance. Project will comply with the credit requirements as per specification sections 01600, 09900, and others which contain relevant language

Q 3.3R **Low-Emitting Materials**, Flooring Systems

All carpet installed in the building will meet the requirements and be certified by the Carpet and Rug Institutes Green Label Plus program. All carpet cushion installed in the building interior will meet the requirements of the Green Label program. All carpet adhesive will meet the VOC requirements of Q 3.1. All hard surface flooring must be certified as compliant with FloorScore standard by independent third-party, including vinyl, linoleum, laminate flooring, ceramic flooring, rubber flooring, wall base, and associated sundries. An alternative path fro this credit is available by providing 100% FloorScore certified non-carpet finished flooring which comprises at

least 25% of the finished floor area. Project will track flooring systems throughout construction. Project will comply with the credit requirements as per specification sections G01600, 09310, 09626, 09650, and 09680.

Q 3.4R **Low-Emitting Materials**, Comp Wood & Agrifiber Products

All composite woods used on the project will not contain urea-formaldehyde. The specifications for the wood sections include the appropriate language. Project will track materials throughout construction. Project will comply with credit requirements as per specifications 06100, 06200, 06410, 08210, 09590, 10100, 10415, 10652, 12302, 12710, and 12761.

Pollution Source Control

Q 4.1R **Indoor Chemical & Pollutant Source Control**

This project will comply with the requirements of this credit by designing according to following design requirements:

1.3.4.1 Entrances and Exits
6.2.0 General Overview of Heating Ventilation and Air Conditioning Systems
6.2.28 HVAC Design Requirements for Special Spaces
6.2.8 Wardrobe Locker Ventilation

The following SCA Standard Specifications are applicable:

12485 Foot Grilles
15852 Air Handling Units
15853 Custom Packaged Rooftop Heating and Cooling Units (Variable Air Volume System)
15854 Custom Packaged Rooftop Heating and Cooling Units (Constant Volume System)

The central HVAC units for the new school will be provided with filters that have a Minimum Efficiency Reporting Value (MERV) of 13, and fan coil units and unit ventilators with MERV-7 filters. In addition, Science rooms, janitors' closets, copy rooms, and storage rooms will be provided with exhaust systems that will maintain those areas under negative air pressure and, therefore, prevent the outflow of room contaminants into other areas of the school.

The MERV 13 filtration efficiency required for the central air handling units is indicated in specification 15852, and the MERV 7 filtration efficiency required for unit ventilators and fan coil units is indicated in specifications 15857 and 15838. All the air supplied tot his building is exhausted (there is no recirculation of air) and toilet rooms, Science rooms, Janitors closets, Kitchen, Acid storage rooms and Mechanical rooms are provided with mechanical exhaust as indicated in design HVAC design drawings.

Permanent entryway systems that are at least 10 feet long will be provided at regular entry points of the building that are directly connected to the outdoors. Rooms where hazardous gases or chemicals may be present (e.g. science lab, janitor's sink closets, ground equipment storeroom, receiving and general storage, copying/printing rooms and garage areas) or are used will be negatively exhausted with respect to adjacent spaces with the doors to the room closed. For each space, a self-closing door and deck-to-deck partitions or hard-lid ceiling will be provided. The exhaust rate shall be designed for at least 0.50 cubic foot per square foot, with no recirculation. Any make-up air provided in the area must be a minimum of 10% less than the exhaust air.

Please see attached plans indicating 10 ft. long permanent entryway systems.

Q 4.2R **Electric Ignition Stoves**

Project intends to install only electronic ignitions for all gas-fired cooking appliances when available. Project will meet credit requirements as per specification sections 11400, and 16722. Additionally project will meet the SCA design requirements on 7.3.13 Gas and Carbon Monoxide Leak Detection and Alarm systems.

Q 4.3R **Provide HEPA Vacuums**

SCA/F&E will provide HEPA vacuums for use within the facility.
The project will get written confirmation from the SCA/F&E to confirm HEPA vacuums will be provided as part of the initial equipment for the school. The project team anticipates meeting the credit requirements.

Controllability of Systems

Q 5.1R **Controllability of Systems**, Lighting

Compliance with this credit is achieved by providing individual lighting controls for at least 90% of the building occupancy and lighting control switches for shared multi-occupants spaces including classrooms. All instructional spaces 2,000 S.F. or less in area, by one ceiling mounted occupancy sensor and two switches located at the entrance door. Each switch shall control one lamp in each fixture on the same side in each row. Key-operated switches shall be provided for assembly spaces (i.e. student dining area), wall mounted occupancy sensors for lighting control in individual offices, and ceiling mounted occupancy sensors in classrooms. The project will meet credit requirements.

See attached floor plans and symbols list (DWG E001) indicating lighting fixtures and control switches (assembly spaces) and occupancy sensors in individual offices (under switch description (Soc)).

SCA Design Requirement 7.2.1 Interior Lighting applies.
SCA Standard Specifications 16140 Wiring Devices, and
16145 Lighting Control Devices apply.

Q 5.2R **Controllability of Systems**, Thermal Comfort

Each classroom, office, and assembly area will be provided with an individual thermostat for temperature control to meet the credit requirements as outlined in specification section 15985.

See attached floor plans indicating locations of temperature control devices.

Project will meet the SCA design requirements of section:
6.2.0 General Overview of HVAC systems
6.2.1 HVAC unit centralization and coordination
6.2.3 Non-assembly Spaces
6.2.4 Public Assembly Spaces

Thermal Comfort

Q 6.1R **Thermal Comfort, Design**

The new HVAC systems for the school will be designed to comply with the New York City SCA HVAC Design Requirements 6.2.9, 6.2.22, and 6.2.28 in order to provide the thermal comfort requirements of ASHRAE 55-2004 and includes consideration for maximum latent OA conditions.

The project will comply with specification sections 15970 and 15985.

Please see attached HVAC calculations demonstrating compliance with ASHRAE 55-2004 Section 6.1.1.

Project will meet the SCA design requirements:
6.2.0 General Overview of HVAC systems
6.2.1 HVAC unit centralization and coordination
6.2.3 Non-assembly Spaces
6.2.4 Public Assembly Spaces
6.2.9 Heating and Cooling Design parameters
6.2.22 Kitchen Ventilation
6.2.28 HVAC Design requirement for Special Spaces

Lighting and Views

Q 7.1 **Daylight & Views**, Daylight 75% of Classrooms

The project will comply with the requirements of this credit. 80.4% of the classroom spaces are daylit based on the prescriptive calculation method. The visible transmittance was assumed to be .60, which is the minimum allowed per SCA specification 08524. Certain areas of the school will be excluded from the calculation because day lighting will hinder their use or performance. Rooms where the product of the visible light transmittance (VLT) and window to floor area ratio (WFR) of daylight zone is less than 0.15 were split into compliant and non-compliant areas.

Please reference the attached daylight & view calculations.

Q 7.2 **Daylight & Views**, Daylight 90% of Classrooms

The project will not be able to comply given that it currently does not achieve a 75% daylighting factor . Please reference the attached daylight & view calculations.

Q 7.3 **Daylight & Views**, Daylight for 75% of Other Spaces

Only 49.6% of the area of the other regularly occupied spaces receives daylight based on the prescriptive calculation method which does not meet the credit requirements and therefore this credit will not be pursued.. Please reference the attached daylight & view calculations.

The following regularly-occupied spaces will be excluded from calculations because daylight would hinder normal use:

Gymatorium: Unwanted glare in the gymatorium would hinder the use of the space as an auditorium. Although the space will include clerestory windows, the gymatorium will not be included in the calculations.

Q 7.4 **Daylight & Views**, Views

The following regularly-occupied spaces will be excluded from calculations because daylight would hinder normal use:

Gymnatorium: Unwanted glare in the gymnatorium would hinder the use of the space as an auditorium. Although the space will include clerestory windows, the gymnatorium will not be included in the calculations.

The project currently provides views for 85.5% of regularly occupied spaces which does not meet the credit requirements and therefore the credit will not be pursued. Please reference the attached views calculations.

Q 7.5 **Visual Performance,** Artificial Direct-Indirect Lighting

All classrooms will be provided with new glare-free pendant-mounted direct-indirect lighting fixtures with high efficiency T-8 fluorescent lamps. The use of this type of lighting fixtures will reduce lighting power density (LPD) and, therefore, use less energy while delivering a better quality of light to the space.

Please see attached point-by-point lighting calculations for typical and non-typical areas.

This project uses the following section numbers:

SCA Design Requirement 7.2.1 Interior Lighting
16500 Interior Building Lighting – Kitchen and Mechanical Spaces
16501 Lamps, Ballasts and Accessories – Kitchen and Mechanical Rooms

Acoustics

Q 8.1R **Minimum Acoustical Performance**

This credit is not viable. Ostergaard Acoustical Associates' 10 May 2012 report, included with this submission, indicates that the background noise criterion for classrooms is met except for the following spaces:
Classrooms 117 & 119 (44 dB(A))
Music Classroom (39 dB(A))

Q 8.2 **Enhanced Acoustical Performance & Sound for Special Spaces**

Full compliance with Q8.2 is anticipated. Ostergaard Acoustical Associates' 7 September 2010 report of acoustical recommendations covers all constructions needed for compliance and is included with this submission. OAA will monitor the contract documents to assure correct integration of sound isolating constructions. Please find memo attached with recommendations through the 60% drawings.

Please note per SCA comment, the Adagio tiles meet the acoustical requirements and the cafeteria has ducted return air which will not be compromised by the fiberglass in the tiles.

A report from Acoustical Consultant verifying that 100% documents meet the requirements has been provided. Please find memo attached with recommendations through the 100% drawings. The outstanding issues have been addressed by the design team per the attached documents:
M102 – Issued April 27, 2011
M103 – Issued April 27, 2011
M003 – Issued April 27, 2011
Section 15660 – Packaged Modular Outdoor Chillers – Issued April 27, 2011

Q 8.3 **Acoustic Windows**

According to Ostergaard Acoustical Associates this credit is not applicable and should not be pursued because standard SCA windows, in conjunction with the masonry façade and roof construction, are sufficient to control the penetration of exterior noise. The SCA committee agrees that this credit is not applicable and will not be pursued.

Additional Credits

A 1.1R **LEED® Accredited Professional**

Project has employed the services of Viridian Energy & Environmental to help advise the project to achieve the SCA's Green Schools requirements. Megan Saunders who is the Green consultant from Viridian on the project is a LEED Accredited Professional.

Optional - Green Roofs

A 2.1 **Heat Island Effect**, Non-Roof

Not pursued

A 2.2 **Stormwater Design**, Quantity Control

Not pursued

Optional - Energy

A 3.1 **Optimize Energy Performance**

Not pursued

A 3.2 **Renewable Energy**

Not pursued

A 5.1 **Low-Emitting Materials**, Furniture

Not pursued

A 5.2 **Low-Emitting Materials**, Ceiling and Wall Systems

Not pursued

Optional - Education

A 6.1 **The School Building as Educational Tool**

Not pursued

S6.1R - Light Pollution Reduction

EXIT	CORRIDORS/ STAIRS	AS INDICATED	LED	McPHILBEN # ER40L	--		DIE-CAST ALUMINUM EXIT SIGNAGE WITH LEAD NICAD BATTERY

LIGHTING FIXTURE SCHEDULE NOTES:

1. ALL LTG FIXTURES SHALL BE SUPPORTED AS INDICATED IN SPECIFICATION SECTIONS 16130 AND 16503 AS REQUIRED TO COMPLY WITH SEISMIC ZONE TWO (2).
2. ALL LTG FIXTURES ARE REQUIRED TO CONFORM WITH THE REQUIREMENTS OF SPECIFICATIONS SECTION 16500.
3. THIS CONTRACTOR SHALL BE HELD RESPONSIBLE FOR ENSURING THAT BALLAST SPECIFIED CORRESPOND TO THE LAMP FOR THE LTG FIXTURE INDICATED. REFER TO SPECIFICATIONS 16501.
4. ALL CEILING LIGHTING FIXTURES REFLECTORS LOUVERS & ACCESSORIES SHALL BE WHITE U.O.I. BY ARCHITECT.
5. ALL LIGHTING FIXTURES COLOR FINAL COLOR & FINISH SELECTION FOR FIXTURES SHALL BE AS SELECTED BY ARCHITECT.
6. ALL RECESSED LENSED FIXTURES TO HAVE SAFETY CHAIN.
7. ELECTRONIC BALLAST TO HAVE 3 YEAR WARRANTY.
8. ALL RECESSED FIXTURES TO HAVE (4) EARTH QUAKE CLIPS.
9. ALL LENSED FLUORESCENT FIXTURES TO HAVE A .130 MINIMUM THICKNESS U.O.I.
10. PROVIDE A SEPARATE NEUTRAL FOR EACH LIGHTING CIRCUIT.
11. CATALOG CUTS OR "SERIES" NUMBERS ARE INTENDED TO PROVIDE ASSISTANCE IN ESTABLISHING GENERAL TYPE OR CATEGORY OF LIGHTING FIXTURES ONLY. CONTRACTOR SHALL PROVIDE A FIXTURE THAT MEETS THE WRITTEN PERFORMANCE AND DESCRIPTION.
12. CONTRACTOR TO COORDINATE FIXTURE AND HOUSING INSTALLATION WITH CEILING TYPE, THICKNESS AND CONSTRUCTION. ANY DISCREPANCIES BETWEEN THE HOUSING TYPE AND TRIM AND CEILING TYPE SHOULD BE BROUGHT TO THE ATTENTION OF THE LIGHTING CONSULTANT PRIOR TO THE RELEASE OF A PURCHASE ORDER.
13. FOCUSING IS REQUIRED FOR ALL ADJUSTABLE FIXTURES AND REQUIRES THE CONTRACTOR TO PROVIDE ALLOWANCE FOR MANPOWER, SCAFFOLDING, AND TOOLS TO ADJUST, AIM, OR INSTALL FIXTURES AND ACCESSORIES PER THE LIGHTING CONSULTANTS DIRECTION DURING EVENING HOURS. THE CONTRACTOR IS TO LOCK BUT NOT OVER-TIGHTEN ALL FIXTURES SO THAT LAMPHOLDERS WILL NOT MOVE DURING SUBSEQUENT RELAMPING. DURING FOCUSING THE LIGHTING CONSULTANT WILL PROVIDE AIMING DIRECTION, INSTRUCTION, AND DEFINE AIMING ANGLES FOR TYPICAL FIXTURES SO THE CONTRACTOR MAY COMPLETE THE FOCUSING DURING DAY HOURS. FOCUSING CAN ONLY OCCUR AFTER INSTALLATION AND CONFIRMED OPERATION OF ALL FIXTURES, AND THE CONTRACTOR HAS VERIFIED INSTALLATION AND CONFIRMED OPERATION OF CONTROL SYSTEMS. INSTALLATION OF SPECIFIC ARCHITECTURAL ORNAMENT OR ART INTENDED TO BE ILLUMINATED MUST BE IN PLACE.

120 BROADWAY
SUITE 1040
NEW YORK, NY 10271

T: 212.431.3609
F: 212.941.1513

The following information is being provided, as per the SCA request, in support of the Green Schools W1.1R and W1.2R credits that were sought under the 60% submission.

It is important to take into consideration a multitude of factors when accurately assessing the moisture requirements of the selected plant material. These include, but are not limited to, location with regards to solar orientation, micro-topography, exposure to western winds, and density of planting (i.e. biomass). When taking these factors into account, MNLA feels that the selected plant palette will survive if provided adequate water during the period of establishment. Many of the planted areas will be shaded by the building mass for half of the day or more. Plants with higher moisture requirements have been sited to take advantage of directed stormwater runoff and low points within the landscaped areas.

The following is a summary of moisture requirements and drought tolerance for plants included in the 60% submission.

Amelanchier canadensis – Drought Tolerance: Medium; Moisture Use: Medium (USDA)
Aronia arbutifolia – Drought Tolerance: Low; Moisture Use: High (USDA)
Aster novi-belgii – Drought Tolerance: Low; Moisture Use: High (USDA)
Cercis canadensis – Drought Tolerance: High; Moisture Use: Low (USDA)
Clethra alnifolia – Drought Tolerance: Low; Moisture Use: High (USDA)
Cornus mas – Drought Tolerance: Low; Moisture Use: Medium (USDA)
Echinacea purpurea – Drought Tolerance: Low; Moisture Use: Medium (USDA)
Fothergilla gardenii – Drought Tolerance: None; Moisture Use: High (USDA)
Hydrangea quercifolia – Drought Tolerance: Medium; Moisture Use: Medium (USDA)
Ilex glabra – Drought Tolerance: Low; Moisture Use: High (USDA)
Juniperus chinensis – Drought Tolerance: Medium; Moisture Use: Medium (USDA)
Liquidambar styraciflua – Drought Tolerance: Low; Moisture Use: High (USDA)
Myrica pennsylavanica – Drought Tolerance: High; Moisture Use: Medium (USDA)
Panicum virgatum – Drought Tolerance: Medium; Moisture Use: Medium (USDA)
Pennisetum alopecuroides – Drought Tolerance: Medium; Moisture Use: Low (USDA)
Querus phellos – Drought Tolerance: None; Moisture Use: High (USDA)
Rhus aromatica – Drought Tolerance: High; Moisture Use: Low (USDA)
Viburnum lentago – Drought Tolerance: Low; Moisture Use: Medium (USDA)

Below is a list of plants not included in the USDA database.

Cotinus coggygria – described in the industry standard resource book named *Dirr's Hardy Trees and Shrubs* as a shrub that "...grows in anything but wet soils."

Tilia tomentosa – described in industry standard resource book named *Dirr's Hardy Trees and Shrubs* as a tree that "Requires ample moisture in the early years of establishment."

Viburnum plicatum var. tomentosum – described in the industry standard resource book named *Dirr's Hardy Trees and Shrubs* as a shrub that when used one should "Provide ample moisture."

MATHEWS
NIELSEN

LANDSCAPE ARCHITECTURE
URBAN DESIGN
ENVIRONMENTAL PLANNING

Echinacea purpurea 'Kim's Knee High' – moisture needs described by the American Horticultural Society as "moist, but well-drained soil".

Monarda 'Mahogany' – moisture needs described by the American Horticultural Society as "Requires moist soil".

Rudbeckia triloba – moisture needs described by the American Horticultural Society as "well-drained or moist soil".

Sedum 'Autumn Joy' – moisture needs described by the American Horticultural Society as "fertile, well-drained soil".

Lirope spicata – the following is an excerpt taken directly from the 2010 Sunny Border Nurseries, Inc. catalog. Sunny Border is a industry leader in the propagation of herbaceous plant material and has been in business for over 80 years.

"Lirope spicata is a perfect lawn substitute...can be plugged in and will spread, ultimately forming a deep green, glossy lawn which is extremely drought tolerant and only needs mowing a couple of times a year."

Veneer Product	No

Panicum virgatum L.
switchgrass
PAVI2
Cultivar: Grenville

Summary

Duration	Perennial
Growth Habit	Graminoid
Native Status	L48 (N), HI (I), CAN (N)
Federal T/E Status	
National Wetland Indicator	UPL, FACW

Morphology/Physiology

Active Growth Period	Summer
After Harvest Regrowth Rate	Moderate
Bloat	None
C:N Ratio	Medium
Coppice Potential	No
Fall Conspicuous	No
Fire Resistant	No
Flower Color	Yellow
Flower Conspicuous	No
Foliage Color	Gray-Green
Foliage Porosity Summer	Dense
Foliage Porosity Winter	Moderate
Foliage Texture	Medium
Fruit/Seed Color	Brown
Fruit/Seed Conspicuous	No
Growth Form	Rhizomatous

Growth Rate	Rapid
Height at 20 Years, Maximum (feet)	
Height, Mature (feet)	4.0
Known Allelopath	No
Leaf Retention	No
Lifespan	Long
Low Growing Grass	No
Nitrogen Fixation	None
Resprout Ability	No
Shape and Orientation	Erect
Toxicity	None

Growth Requirements

Adapted to Coarse Textured Soils	Yes
Adapted to Fine Textured Soils	Yes
Adapted to Medium Textured Soils	Yes
Anaerobic Tolerance	Medium
CaCO3 Tolerance	Low
Cold Stratification Required	No
Drought Tolerance	Medium
Fertility Requirement	High
Fire Tolerance	High
Frost Free Days, Minimum	180
Hedge Tolerance	None
Moisture Use	Medium
pH, Minimum	4.5
pH, Maximum	7.5
Planting Density per Acre, Minimum	
Planting Density per Acre, Maximum	
Precipitation, Minimum	14
Precipitation, Maximum	30
Root Depth, Minimum (inches)	12
Salinity Tolerance	Medium

Shade Tolerance	Intolerant
Temperature, Minimum (°F)	-23

Reproduction

Bloom Period	Late Summer
Commercial Availability	Routinely Available
Fruit/Seed Abundance	High
Fruit/Seed Period Begin	Summer
Fruit/Seed Period End	Fall
Fruit/Seed Persistence	No
Propagated by Bare Root	No
Propagated by Bulb	No
Propagated by Container	No
Propagated by Corm	No
Propagated by Cuttings	No
Propagated by Seed	Yes
Propagated by Sod	No
Propagated by Sprigs	No
Propagated by Tubers	No
Seed per Pound	259000
Seed Spread Rate	Moderate
Seedling Vigor	Medium
Small Grain	No
Vegetative Spread Rate	Slow

Suitability / Use

Berry/Nut/Seed Product	No
Christmas Tree Product	No
Fodder Product	Yes
Fuelwood Product	
Lumber Product	No
Naval Store Product	No
Nursery Stock Product	No

Palatable Browse Animal	Medium
Palatable Graze Animal	High
Palatable Human	No
Post Product	No
Protein Potential	Medium
Pulpwood Product	No
Veneer Product	No

Panicum virgatum L.
switchgrass
PAVI2
Cultivar: Kanlow

***Design Case* "School in Full Operation" Total Volume [Gal]**	***641,845.5***

Sub-Total: Water Use Reduction for "School in Full Operation"	***33%***

Notes:

1. Figures in shaded boxes are based on EPA 1992 as amended in 2005 with revisions as per LEED 2009 (base case), SCA standards (design case) or are calculated by this spreadsheet. No design team revision required.

2. Spreadsheet will calculate occupant users for water closets and urinals for design and base cases based on figures entered by Design Team for "Occupant Users" for "Conventional Lavaratory" for students and adults, along with "% of Student Population by Grade". Distribution of male and female "Occupant USers" are based on assumption of 50-50 ratio of male and female.

3. Methodology to determine student population: Use unadjusted capacity from POR
Methodology to determine adult population: Follow DR 2.3.3.-Bicycle Racks

4. Figure entered by Design Team for occupant users for showers should include all physical education staff, potential adult bike users (GSG credit S 2.2) and for high schools with showers in the student locker rooms, all students.

5. Figure entered by Design Team to determine occupant users for "Food Service Hand Sinks" is based on 1 FTE for each 100 students. Student poplulation based on unadjusted capacity from POR is to be entered. (Minimum of 2 kitchen staff is required).

6. For "Summer Operation", occupant users is anticipated to be 30% of "Full Operation Population". If program is known to be different, actual summer population should be entered.

7. For "Annual Days of Summer Operation", revise anticipated number of days for regular summer operation, excluding weekends and days when school is closed, if program is known to be different than the default value of 30.

8. Modernization projects should include the actual fixture flow rate of fixtures to remain in the design case calculations and indicate assumptions about percentage of occupant users who will use those existing fixtures to remain.

9.Percentage of Student Population by Grade should be based on number of students in classrooms with toilets located within the classrooms. Dedicated classroom toilets would be applicable to PK and K and to first and second grade classrooms as indicated in the POR. Single user toilets are typically provided for staff use.

10. For typical IS and HS, percentage of occupant users in the PK-2 row should be equal to zero.

11. For typical PS and PS/IS, percentage of occupant users in the PK-2 row should be based on occupants users in PK-2 grade classrooms that have dedicated toilets.

NOTES:

1. N/A
2. PROVIDE ONE SPACE HUMIDITY SENSOR PER SYSTEM AS SHOWN ON THE DRAWINGS.
3. RETURN FAN STARTER/VFD SHALL BE INTERLOCKED WITH SUPPLY FAN STARTER/VFD FOR START/STOP COMMAND.
4. DEVICES MOUNTED IN CAFETERIA AND HARDWIRED TO RTU
5. DEVICES MOUNTED IN KITCHEN AND HARDWIRED TO RTU
6. TEMPERATURE CONTROLS CONTRACTOR (TCC) SHALL FURNISH A GAS METER (INSTALLED IN THE RTU GAS HEADER BY THE P&D CONTRACTOR). TCC SHALL INTEGRATE ALL POINTS INTO THE BMS PER SPEC. ONLY THE HEADER FEEDING ALL OF THE ROOFTOP UNITS (NOT EACH INDIVIDUAL ROOFTOP UNIT) REQUIRES FLOW AND PRESSURE MONITORING.
7. VARIABLE FREQUENCY DRIVES USED TO FACILITATE BALANCING PROCEDURE AND FOR TWO-SPEED CONTROL.
8. SAFETY DEVICES SHALL BE HARDWIRED TO THE FAN STARTER CIRCUIT, IN ADDITION TO THE DDC SYSTEM. COORDINATE WITH VFD VENDOR ASSURING THAT THE SAFETIES SHUTDOWN THE FAN IN ALL MODES.
9. FAN ELECTRICAL USAGE (KW, KWH) IS AVAILABLE FOR EACH FAN FROM VFD ENSTES. PROVIDE ONE WATT METER ON THE FEEDER SERVING ALL OF THE ROOFTOP UNITS TO MONITOR THE CUMULATIVE ELECTRICAL USAGE (KW, KWH) BY ALL OF THE ROOFTOP UNITS. (COMPRESSOR ELECTRICAL USAGE CAN THEN BE CALCULATED BY SUBTRACTING OUT FAN ELECTRICAL USAGE).
10. IF THE FLAME SUPERVISION SYSTEM CAN NOT TRANSMIT A FLAME FAILURE INDICATION SIGNAL THAT CAN BE MAPPED OVER TO THE LONWORKS SYSTEM, TCC SHALL USE ALTERNATE MEANS TO INDICATE FLAME FAILURE (EX. ALARM ON LOW MAIN FURNACE OR ALARM ON LOW FLUE GAS TEMP, ETC.)
11. PROVIDE ONE OUTDOOR AIR FLOW MEASURING STATION FOR EACH OUTDOOR AIR INTAKE POST.
12. SMOKE DETECTOR, SUPPLY AIR TEMP. SENSOR AND HIGH LIMIT DISCHARGE TEMP. SENSOR FOR GAS HEATER SHALL BE INSTALLED IN DUCTWORK 5 FEET FROM DISCHARGE OPENING INSIDE THE BUILDING. (APPLICABLE FOR MAIN UNITS ONLY)

LEGEND:

X = PROVIDE QUANTITY AS REQUIRED TO INCLUDE ALL INSTANCES OF THE INDICATED FEATURE. INCLUDE MULTIPLE POINTS WITHIN EACH MECHANICAL SYSTEM AS NECESSARY. COORDINATE WITH EQUIPMENT VENDOR.

B = INFORMATION PROVIDED TO EACH SYSTEM VIA NETWORK BROADCAST.

NOTES:

1. THE POINT LISTED HEREIN ARE THE MINIMUM POINTS REQUIRED FOR THE CONTROL AND MONITORING OF THIS EQUIPMENT. THIS POINT LIST IS TYPICAL FOR EACH MECHANICAL/ELECTRICAL SYSTEM OF THIS TYPE. IF THE SEQUENCE OF OPERATION REQUIRES ADDITIONAL OR DIFFERING INFORMATION IT MUST BE PROVIDED BY THE RESPECTIVE PROVIDER OF THE CONTROLS FOR THIS TYPE OF EQUIPMENT AS COORDINATED BY THE GENERAL AND MECHANICAL CONTRACTORS.
2. THE TCC SHALL PROVIDE ALL DIGITAL ALARM LOGIC. ALL DIGITAL ALARMS SHALL BE PART OF THE LNS DATABASE.
3. THE FMS SHALL PROVIDE ALL TRENDING AND ANALOG ALARMING VIA THE WONDERWARE SOFTWARE.
4. PROVIDE ACCUMULATED AIR FLOW FOR VALIDATION OF PURGE-MODE AND FOR PERMANENT VALIDATION OF OCCUPANT VENTILATION..
5. PROVIDE MANUAL RESET DEVICE. NOTE THAT THIS DEVICE BOTH ALARMS IN THE BMS AND IS HARDWIRED TO THE VFD'S FOR SHUTDOWN OF FANS IN ALL OPERATING CONDITIONS OF THE VFD.
6. PROVIDE LON COMMUNICATION CONNECTION TO THIS DEVICE MAPPING ALL REQUIRED POINTS INTO THE LNS DATABASE.
7. PROVIDE THE ALARM INDICATED AT THE CALCULATED DIFFERENTIAL BETWEEN OUTSIDE AIR AND SPACE AIR CO2 VALUES.
8. ANNUNCIATE ALARM ONLY AFTER AN EIGHT (8)-HOUR OF CONTINUOUS RELATIVE HUMIDITY AT THE HIGH LIMIT ALARM SETPOINT.

Legend:

X = Provide quantity as required to include all instances of the indicated feature. Include multiple points within each mechanical system as necessary. Coordinate with equipment vendor.

Notes:

1. The point listed herein are the minimum points required for the control and monitoring of this equipment. This point list is typical for each mechanical/electrical system of this type. If the sequence of operation requires additional or differing information it must be provided by the respective provider of the controls for this type of equipment as coordinated by the General and Mechanical Contractors.
2. The TCC shall provide all digital alarm logic. All digital alarms shall be part of the LNS database.
3. The FMS shall provide all trending and analog alarming via the Wonderware Software.
4. Provide Lon communication connection to this device mapping all required points into the LNS database.
5. REFER TO DRAWING H206 FOR DETAILS OF THIS SYSTEM.

EXECUTIVE SUMMARY

The purpose of this analysis is to show whether the proposed Targee School (PS71R) meets the requirements of EAp2 "Minimum Energy Performance" to earn a LEED rating under LEED NC 3.0. A building can show compliance with EAp2 by saving at least 10% in total energy costs compared to a building that is minimally compliant with the baseline building defined by ASHRAE 90.1-2007 Appendix G.

The proposed design, as understood by Viridian, includes the following energy efficient measures:

- Increased wall insulation- U = 0.056 Btu/hr-ft2-F instead of U = 0.064 Btu/hr-ft2-F
- Increased roof insulation- U = 0.046 Btu/hr-ft2-F instead of U = 0.048 Btu/hr-ft2-F
- More efficient windows- Ufen = 0.51 Btu/hr-ft2-F with SHGC = 0.38 instead of Ufen = 0.55 Btu/hr-ft2-F with SHGC = 0.4
- Reduced lighting power density (1.0 w/ft^2 vs 1.2 W/ft^2)
- Occupancy Sensors in classrooms
- CO2 ventilation controls in gymnasium and gymnatorium instead of just in gymnatorium
- Heat recovery on all RTU's except cafeteria
- High efficiency DX units (EER = 10.9 instead of 9.8)
- High efficiency air-cooled chiller (EER = 13.2 instead of 9.5)
- 87% efficient condensing boiler with modulating flame controls instead of 80% efficient boiler with on/off controls
- Dedicated outdoor air system and unit ventilators reduce required fan power

Results
The proposed design saves approximately $28,000, or 10.9%, compared to the LEED 3.0 baseline based on ASHRAE 90.1-2007 Appendix G. The building exceeds the minimum 10% requirement and would be eligible to pursue LEED 3.0 certification.

Case	Total Electricity Use (kWh)	Total Electricity Cost ($)	Total Gas Use (CCF)	Total Gas Cost ($)	Total Utility Cost ($)	Savings vs. LEED 3.0 Baseline ($)	Savings vs. LEED 3.0 Baseline (%)
LEED 3.0 Baseline	768,695	174,483	48,572	81,227	255,710		
Design Case	769,177	168,379	35,648	59,389	227,768	$27,942	10.93%

1. DESCRIPTION OF BUILDING CHARACTERISTICS

This section summarizes important parameters used in the Design Case simulation including envelope thermal properties, internal loads and schedules, and HVAC system operation schedules and specifications. The energy model is based on floor plans and HVAC descriptions dated May 2010.

1.1. Building Identification

PS-71R School in Staten Island, New York
Weather File: New York, NY
Building Addition Area: Approximately 100,500 ft^2 of conditioned space.

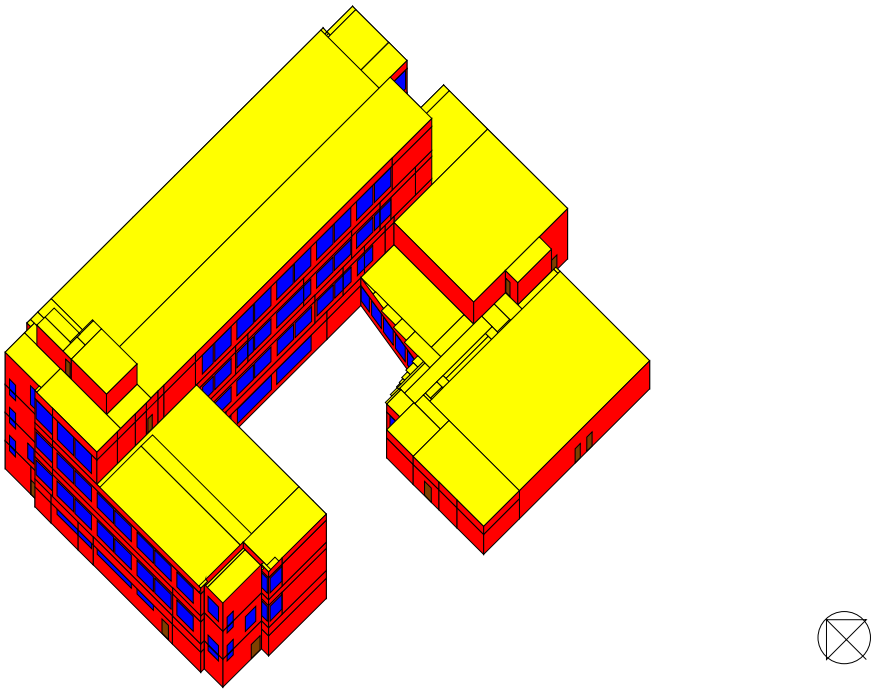

Figure 1. DOE 2.1 Rendering of proposed addition

1.2. Building Envelope Construction

Exterior wall construction

- 4” nominal utility brick
- 4” nominal air cavity w/ 3” rigid insulation (R15)
- 6” nominal CMU
- 2-1/2” nominal metal stud
- 5/8” gypsum wallboard
- U-value = 0.056 BTU/Hr-ft^{2}-$^{\circ}$F

Roof

- 2” White Pavers with SRI > 0.79
- 4” Polystyrene
- EPDM
- 3-1/4” concrete over 3” metal decking
- U factor$_{eff}$ = 0.046 BTU/Hr-ft2-°F

Windows

- Fenestration / gross wall area ratio: 25%
- Type: spectrally selective low-e
- U $_{\text{center of glass}}$ 0.30
- U $_{\text{fenestration}}$ 0.51
- Visible Transmittance 60%
- Shading Coefficient 0.44
- Solar Heat Gain Coefficient 0.38
- Thermally Broken Aluminum Frames
- Operable windows

1.3. Internal Load Patterns

The building will operate five days a week. Daily schedules of operation will vary with space type.

1.3.1. Occupancy Patterns

Space Type	Occupancy Density	Schedule
Cafeteria	14 ft^{2}/person	Cafeteria Occupancy Schedule
Classroom	33 ft^{2}/person	Classroom Occupancy Schedule
Gym/ Gymnatorium	50 ft^{2}/person	Gymnasium Occupancy Schedule
Kitchen	50 ft^{2}/person	Kitchen Occupancy Schedule

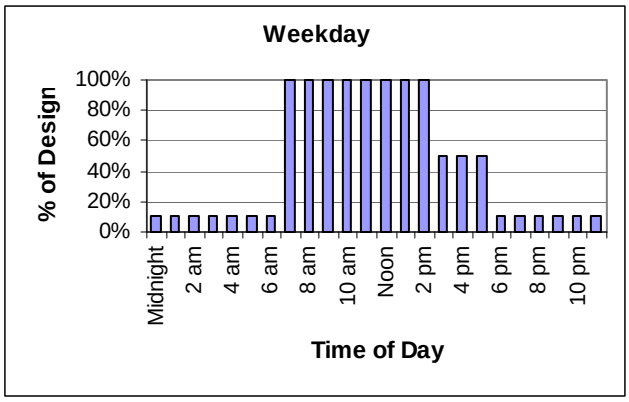
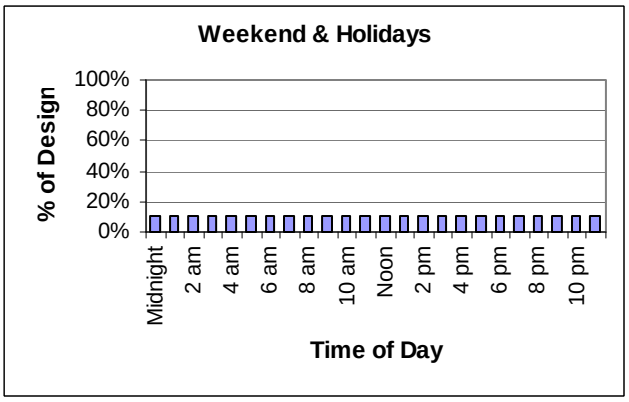
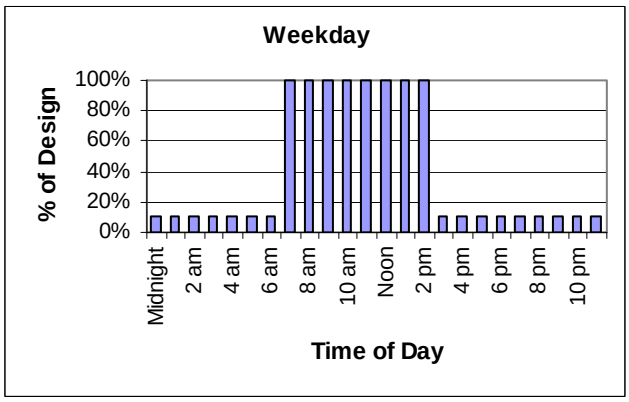
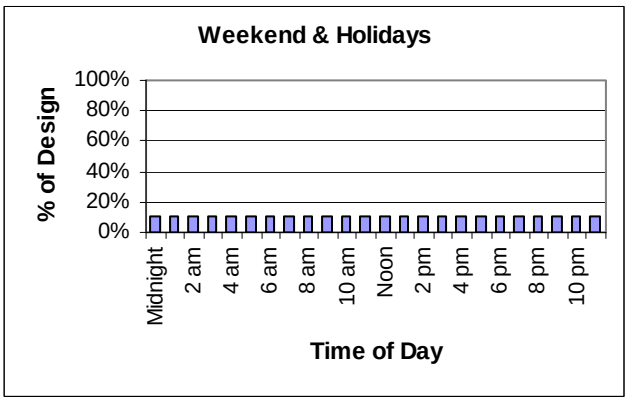
Winter/Fall Schedule





Summer Schedule





1.4. Building Environmental Conditions

Heating and cooling follow the occupancy schedules.

1.4.1. Heating Schedule

Heating temperature is set for 72°F during the hours of operation with a 65°F setback during unoccupied hours between January 1 thru May 15 and October 1 thru December 31.

1.4.2. Cooling Schedule

Cooling temperature is set for 76°F during the hours of operations with an 85°F setback during unoccupied hours from May 15 thru October 1.

2. MECHANICAL SYSTEM

2.1. General

Outdoor air will be provided to the corridors and classrooms via constant volume RTU's. The CV RTU's will temper the outdoor air via 80% efficient, modulating gas furnaces and DX cooling.

Recirculating unit ventilators will provide additional heating and cooling to the classrooms. 87% efficient, condensing boilers will provide hot water to the unit ventilators. An air-cooled chiller will provide chilled water to the unit ventilators.

Heating and cooling will be provided to the assembly spaces (cafeteria, gymnasium, and gymnatorium) via constant volume DX units with modulating flame natural gas furnaces.

2.2. Boilers

Two Veissman 87% efficient, modulating flame boilers will be installed. The boilers provide hot water to the unit ventilators.

2.3. Rooftop Units

The rooftop units all have variable speed drives and modulating furnace control. The classroom RTU's provide 100% outside air to the classrooms and corridors. The RTU's are constant volume, DX units with EER = 10.9. The fan power is estimated based on 5 inH2O supply pressure drop and 1-1.75 inH2O return pressure drop. The total fan efficiencies are 60%. The properties of the RTU's are given below.

Tag	Service	Total Air Flow (cfm)	Total Brake Horsepower (Supply + Return, assumed)	Heating Efficiency	Cooling EER
RTU-1	Classrooms	14,000	29.3	80%	10.9
RTU-2	Classrooms	14,000	17.4	80%	10.9
RTU-3	Classrooms	8,000	30.6	80%	10.9
RTU-4	Kitchen/ Cafeteria	7,500	11.8	80%	10.9
RTU-5	Gymnatorium	7,500	7.7	80%	10.9
RTU-6	Gymnasium	4,000	12.8	80%	10.9

2.4. Unit Ventilators

The unit ventilators in the classrooms are assumed to have supply pressure drop of 0.75 inH2O and supply efficiency = 50%.

2.5. Air Cooled Chiller

A 200-ton air cooled chiller with EER = 13.2 supplies chilled water to the unit ventilators.

2.6. Pumps

The pumps are assumed to be minimally compliant with ASHRAE 90.1-2007, Appendix G. The chilled water pumps require 22 W/gpm and the hot water pumps use 19 W/gpm.

3. UTILITY RATES

Electricity- NYPA rate, Conventional account as of February 2009
Energy : $0.06739/ kWh
Demand : $11.63/kW
Delivery : $17.07/kW

Natural Gas- ConEdison Firm rate as of February 2009
Energy, On-Peak Firm : $1.72/ therm (November-April)
Energy, On-Peak Firm : $1.08/ therm (May-October)

4. Side-By-Side Comparison of Preferred Design and LEED 3.0 Baseline Cases for PS-71R

Building as Designed	ASHRAE 90.1-2007 Appendix G LEED Baseline Model
Exterior wall construction • 4" nominal utility brick • 4" nominal air cavity w/ 3" rigid insulation (R15) • 6" nominal CMU • 2-1/2" nominal metal stud • 5/8" gypsum wallboard • U-value = 0.056 BTU/Hr-ft^{2}-$^{\circ}$F •	*Exterior wall construction* • Stucco • 5/8" Gypboard • Insulation • 5/8" Gypboard • U factor$_{eff}$ = 0.064 BTU/Hr-ft^{2}-$^{\circ}$F
Roof • 2" White Pavers with SRI > 0.79 • 4" Polystyrene • EPDM • 3-1/4" concrete over 3" metal decking • U factor$_{eff}$ = 0.046 BTU/Hr-ft^{2}-$^{\circ}$F	*Roof* • 2" Gravel • 2.8" Polystyrene • EPDM • 8" Concrete • U factor$_{eff}$ = 0.048 BTU/Hr-ft^{2}-°F
Windows • Type: spectrally selective low-e • U $_{\text{center of glass}}$ 0.30 • U $_{\text{fenestration}}$ 0.51 • Visible Transmittance 60% • Shading Coefficient 0.44 • Solar Heat Gain Coefficient 0.38 • Thermally Broken Aluminum Frames • Operable windows	*Windows* • Type: double pane clear insulating • U $_{\text{fenestration}}$ =0.55 • Shading coefficient = 0.465 • Solar Heat Gain Coefficient= 0.4
Lighting Average Lighting power density = 1.0 W/ft^{2}	*Lighting* Average Lighting power density = 1.2 W/ft^{2}

General HVAC Outdoor air will be provided to the corridors and classrooms via constant volume RTU's. The CV RTU's will temper the outdoor air via 80% efficient, modulating gas furnaces and DX cooling. Recirculating unit ventilators will provide additional heating and cooling to the classrooms. 87% efficient, condensing boilers will provide hot water to the unit ventilators. An air-cooled chiller will provide chilled water to the unit ventilators. Heating and cooling will be provided to the assembly spaces (cafeteria, gymnasium, and gymnatorium) via constant volume DX units with modulating flame natural gas furnaces.	*General HVAC* All cooling to the corridors and classrooms will be provided via variable volume packaged DX units. Heating will be provided by 80% efficient, on/off boilers. Heating and cooling will be provided to the assembly spaces (cafeteria, gymnasium, and gymnatorium) via constant volume DX units with on/off natural gas furnaces.
Cooling Equipment RTU 1-6 EER = 10.9 • Air-cooled, packaged DX units, EER = 10.9 Air Cooled Chiller EER = 13.2	*Cooling Equipment* • RTU-1 – EER = 9.5 • RTU-2 – EER = 9.5 • RTU-3 – EER = 9.5 • RTU-4 – EER = 9.8 • RTU-5 – EER = 9.8 • RTU-6 – EER = 9.8
Heating Equipment Furnaces • Gas fired furnaces with modulating flame • Rated Efficiency 80% • Furnaces provide 100% of heating to cafeteria, gymnasium, and gymnatorium, and temper outside air to classrooms Boilers • (2) gas fired boilers supply heating to classroom unit ventilators • Modulating flame controls • Rated Efficiency 87% • Hot water delta-T 20 °F	*Heating Equipment* Furnaces • Gas fired furnaces with on/off controls • Rated Efficiency 80% • Furnaces provide 100% of heating to cafeteria, gymnasium, and gymnatorium Boilers • (2) Gas fired boilers supply all heat to classrooms • On/off controls • Rated Combustion Efficiency 80% • Hot water delta-T 50 °F

Fans RTU's 1-3 • Supply DP = 5.0" • Supply efficiency = 60% • Return DP = 1.75" • Return efficiency = 60% RTU 4 • Supply DP = 5.0" • Supply efficiency = 60% • Return DP = 1.0" • Return efficiency = 60% RTU 5-6 • Supply DP = 5.0" • Supply efficiency = 60% • Return DP = 1.5" • Return efficiency = 60% Unit ventilator fans • Supply DP = 0.75" • Supply efficiency = 50% **Note: The fan power is based on assumptions made by the energy modeler. Deviations from these assumptions may have a significant impact on the level of savings.**	*Fans* Fan power compliant with ASHRAE 90.1-2007
Heat Recovery 50% effective heat recovery on RTU's 1,2,3,5 & 6	*Heat Recovery* 50% effective heat recovery on RTU's 5 & 6
Pumping Equipment Minimally compliant with ASHRAE 90.1-2007	*Pumping Equiment* Minimally compliant with ASHRAE 90.1-2007

5. RESULTS

The proposed design, as understood by Viridian, includes the following energy efficient measures:

- Increased wall insulation- U = 0.056 Btu/hr-ft2-F instead of U = 0.064 Btu/hr-ft2-F
- Increased roof insulation- U = 0.046 Btu/hr-ft2-F instead of U = 0.048 Btu/hr-ft2-F
- More efficient windows- Ufen = 0.51 Btu/hr-ft2-F with SHGC = 0.38 instead of Ufen = 0.55 Btu/hr-ft2-F with SHGC = 0.4
- Reduced lighting power density (1.0 w/ft^2 vs 1.2 W/ft^2)
- Occupancy Sensors in classrooms
- CO2 ventilation controls in gymnasium and gymnatorium instead of just in gymnatorium
- Heat recovery on all RTU's except cafeteria
- High efficiency DX units (EER = 10.9 instead of 9.8)
- High efficiency air-cooled chiller (EER = 13.2 instead of 9.5)
- 87% efficient condensing boiler with modulating flame controls instead of 80% efficient boiler with on/off controls
- Dedicated outdoor air system and unit ventilators reduce required fan power

The proposed design saves approximately $28,000, or 10.9%, compared to the LEED 3.0 baseline based on ASHRAE 90.1-2007 Appendix G. The building exceeds the minimum 10% requirement and would be eligible to pursue LEED 3.0 certification.

Case	Total Electricity Use (kWh)	Total Electricity Cost ($)	Total Gas Use (CCF)	Total Gas Cost ($)	Total Utility Cost ($)	Savings vs. LEED 3.0 Baseline ($)	Savings vs. LEED 3.0 Baseline (%)

ENERGY ANALYSES
for
TARGEE SCHOOL- PS71R

Preliminary Local Law 86Compliance Analysis

prepared by

Viridian Energy & Environmental, LLC
50 Washington Street
Norwalk, CT 06854

for

Kliment Halsband Architects
322 Eighth Avenue
New York, New York 10001

6 December 2010

EXECUTIVE SUMMARY

The purpose of this analysis is to show whether the proposed Targee School (PS71R) meets the requirements of Local Law 86. A building can show compliance with Local Law 86 by saving at least 20% compared to a building that is minimally compliant with the baseline building defined by ASHRAE 90.1-2004 Section 11 ECB Method. Unregulated loads, such as plug and process loads, are excluded from the cost comparison.

The proposed design, as understood by Viridian, includes the following energy efficient measures:

- Increased wall insulation- U = 0.056 Btu/hr-ft2-F instead of U = 0.151 Btu/hr-ft2-F
- Increased roof insulation- U = 0.046 Btu/hr-ft2-F instead of U = 0.063 Btu/hr-ft2-F
- More efficient windows- Ufen = 0.51 Btu/hr-ft2-F with SHGC = 0.38 instead of Ufen = 0.57 Btu/hr-ft2-F with SHGC = 0.39
- Reduced lighting power density (1.0 w/ft^2 vs 1.2 W/ft^2)
- Occupancy Sensors in classrooms
- CO2 ventilation controls in gymnasium and gymnatorium instead of just in gymnatorium
- Heat recovery on all RTU's except cafeteria
- High efficiency DX units (EER = 10.9 instead of 9.8)
- High efficiency air-cooled chiller ($EER_{average}$ = 13.2 instead of 9.1)
- 87% efficient condensing boiler with modulating flame controls instead of 80% efficient boiler with on/off controls
- Dedicated outdoor air system and unit ventilators reduce required fan power

Results
The proposed design saves approximately $63,258, or 21.6% in total, when compared to the ECB Baseline based on ASHRAE 90.1-2004 Section 11.

.

TOTAL ENERGY SAVINGS

Case	Total Electricity Use (kWh)	Total Electricity Cost ($)	Total Gas Use (CCF)	Total Gas Cost ($)	Total Utility Cost ($)	Savings vs ECB Baseline ($)	Savings vs. ECB Baseline (%)
ECB Baseline	957,721	215,674	46001	76,874	292,548		
Design Case	769,177	169,901	35,648	59,389	229,290	$63,258	21.6%

When unregulated loads are separated out of the model results, the proposed design saves approximately 23.9%, compared to the ECB Baseline based on ASHRAE 90.1-2004 Section 11. The building exceeds the minimum 20% requirement for Local Law 86.

REGULATED LOAD ENERGY SAVINGS

Case	Total Electricity Use (kWh)	Total Electricity Cost ($)	Total Gas Use (CCF)	Total Gas Cost ($)	Total Utility Cost ($)	Savings vs ECB Baseline ($)	Savings vs. ECB Baseline (%)
ECB Baseline	829,671	189,557	44,559	74,858	264,415		
Design Case	641,120	143,784	34206	57,373	201,157	$63,258	23.9%

DESCRIPTION OF BUILDING CHARACTERISTICS

This section summarizes important parameters used in the Design Case simulation including envelope thermal properties, internal loads and schedules, and HVAC system operation schedules and specifications. The energy model is based on floor plans and HVAC descriptions dated May 2010.

1.1. Building Identification

PS-71R School in Staten Island, New York
Weather File: New York, NY
Building Addition Area: Approximately 100,500 ft^2 of conditioned space.

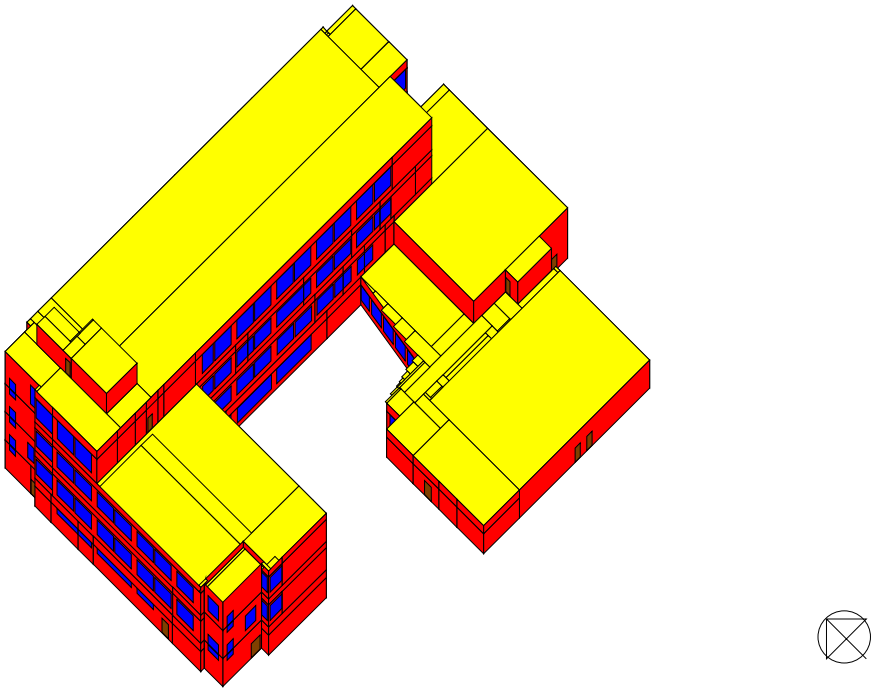

Figure 1. DOE 2.1 Rendering of proposed addition

1.2. Building Envelope Construction

Exterior wall construction

- 4" nominal utility brick
- 4" nominal air cavity w/ 3" rigid insulation (R15)
- 6" nominal CMU
- 2-1/2" nominal metal stud
- 5/8" gypsum wallboard
- U-value = 0.056 BTU/Hr-ft^{2}-$^{\circ}$F

Roof

- 2" White Pavers with SRI > 0.79
- 4" Polystyrene
- EPDM
- 3-1/4" concrete over 3" metal decking
- U factor$_{eff}$ = 0.046 BTU/Hr-ft2-°F

Windows

- Fenestration / gross wall area ratio: 25%
- Type: spectrally selective low-e
- U $_{\text{center of glass}}$ 0.30
- U $_{\text{fenestration}}$ 0.51
- Visible Transmittance 60%
- Shading Coefficient 0.44
- Solar Heat Gain Coefficient 0.38
- Thermally Broken Aluminum Frames
- Operable windows

1.3. Internal Load Patterns

The building will operate five days a week. Daily schedules of operation will vary with space type.

1.3.1. Occupancy Patterns

Space Type	Occupancy Density	Schedule
Cafeteria	14 ft^{2}/person	Cafeteria Occupancy Schedule
Classroom	33 ft^{2}/person	Classroom Occupancy Schedule
Gym/ Gymnatorium	50 ft^{2}/person	Gymnasium Occupancy Schedule
Kitchen	50 ft^{2}/person	Kitchen Occupancy Schedule

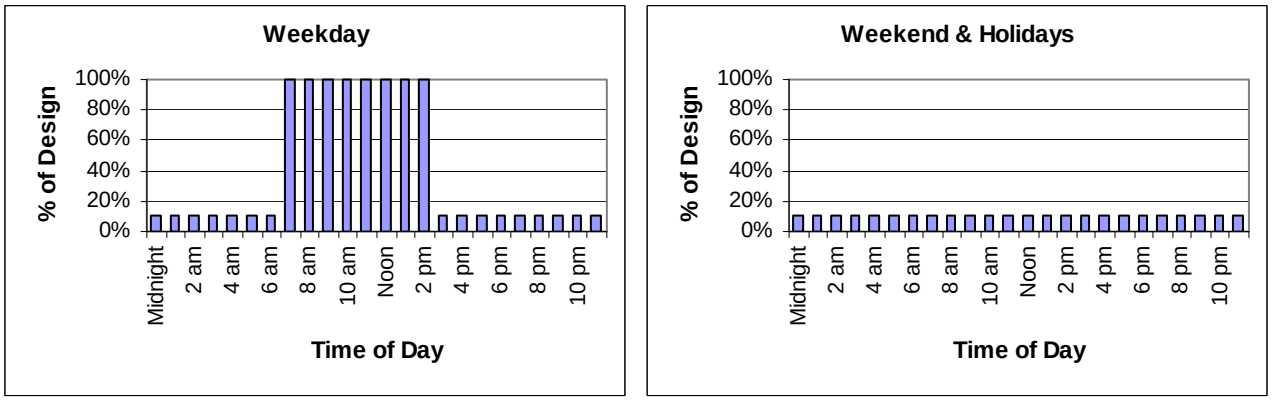
Summer Schedule



1.4. Building Environmental Conditions

Heating and cooling follow the occupancy schedules.

1.4.1. Heating Schedule

Heating temperature is set for 72°F during the hours of operation with a 65°F setback during unoccupied hours between January 1 thru May 15 and October 1 thru December 31.

1.4.2. Cooling Schedule

Cooling temperature is set for 76°F during the hours of operations with an 85°F setback during unoccupied hours from May 15 thru October 1.

2. MECHANICAL SYSTEM

2.1. General

Outdoor air will be provided to the corridors and classrooms via constant volume RTU's. The CV RTU's will temper the outdoor air via 80% efficient, modulating gas furnaces and DX cooling.

Recirculating unit ventilators will provide additional heating and cooling to the classrooms. 87% efficient, condensing boilers will provide hot water to the unit ventilators. An air-cooled chiller will provide chilled water to the unit ventilators.

Heating and cooling will be provided to the assembly spaces (cafeteria, gymnasium, and gymnatorium) via constant volume DX units with modulating flame natural gas furnaces.

2.2. Boilers

Two Veissman 87% efficient, modulating flame boilers will be installed. The boilers provide hot water to the unit ventilators.

2.3. Rooftop Units

The rooftop units all have variable speed drives and modulating furnace control. The classroom RTU's provide 100% outside air to the classrooms and corridors. The RTU's are constant volume, DX units with EER = 10.9. The fan power is estimated based on 5 inH2O supply pressure drop and 1-1.75 inH2O return pressure drop. The total fan efficiencies are 60%. The properties of the RTU's are given below.

Tag	Service	Total Air Flow (cfm)	Total Brake Horsepower (Supply + Return, assumed)	Heating Efficiency	Cooling EER
RTU-1	Classrooms	14,000	29.3	80%	10.9
RTU-2	Classrooms	14,000	17.4	80%	10.9
RTU-3	Classrooms	8,000	30.6	80%	10.9
RTU-4	Kitchen/ Cafeteria	7,500	11.8	80%	10.9
RTU-5	Gymnatorium	7,500	7.7	80%	10.9
RTU-6	Gymnasium	4,000	12.8	80%	10.9

2.4. Unit Ventilators

The unit ventilators in the classrooms are assumed to have supply pressure drop of 0.75 inH2O and supply efficiency = 50%.

2.5. Air Cooled Chiller

A 200-ton air cooled chiller with EER = 13.2 supplies chilled water to the unit ventilators.

2.6. Pumps

The pumps are assumed to be minimally compliant with ASHRAE 90.1-2007, Appendix G.

The chilled water pumps require 22 W/gpm and the hot water pumps use 19 W/gpm.

3. UTILITY RATES

Electricity- NYPA rate, Conventional account as of February 2009
Energy : $0.06739/ kWh
Demand : $11.63/kW
Delivery : $17.07/kW

Natural Gas- ConEdison Firm rate as of February 2009
Energy, On-Peak Firm : $1.72/ therm (November-April)
Energy, On-Peak Firm : $1.08/ therm (May-October)

4. Side-By-Side Comparison of Proposed Design and ECB Baseline Cases for PS-71R

Building as Designed	ASHRAE 90.1-2004 Section 11 ECB Baseline Model
Exterior wall construction • 4" nominal utility brick • 4" nominal air cavity w/ 3" rigid insulation (R15) • 6" nominal CMU • 2-1/2" nominal metal stud • 5/8" gypsum wallboard • U-value = 0.056 BTU/Hr-ft^{2}-$^{\circ}$F •	*Exterior wall construction* • Same heat capacity as the proposed design • Insulation R-5.7 ci • U factor$_{eff}$ = 0.151 BTU/Hr-ft^{2}-$^{\circ}$F
Roof • 2" White Pavers with SRI > 0.79 • 4" Polystyrene • EPDM • 3-1/4" concrete over 3" metal decking • U factor$_{eff}$ = 0.046 BTU/Hr-ft^{2}-$^{\circ}$F	*Roof* • Same heat capacity as the proposed design • Insulation R-15 ci • U factor$_{eff}$ = 0.063 BTU/Hr-ft^{2}-°F
Windows • 25% window to wall area ratio • Type: spectrally selective low-e • U $_{\text{center of glass}}$ 0.30 • U $_{\text{fenestration}}$ 0.51 • Visible Transmittance 60% • Shading Coefficient 0.44 • Solar Heat Gain Coefficient 0.38 • Thermally Broken Aluminum Frames • Operable windows	*Windows* • 25% window to wall area ratio • Type: double pane clear insulating • U $_{\text{fixedfenestration}}$ =0.57 • U $_{\text{operablefenestration}}$ =0.67 • 50% operable windows • Shading coefficient = 0.44 • Solar Heat Gain Coefficient= 0.39
Lighting Average Lighting power density = 1.0 W/ft^{2}	*Lighting* Average Lighting power density = 1.2 W/ft^{2}

General HVAC Outdoor air will be provided to the corridors and classrooms via constant volume RTU's. The CV RTU's will temper the outdoor air via 80% efficient, modulating gas furnaces and DX cooling. Recirculating unit ventilators will provide additional heating and cooling to the classrooms. 87% efficient, condensing boilers will provide hot water to the unit ventilators. An air-cooled chiller will provide chilled water to the unit ventilators. Heating and cooling will be provided to the assembly spaces (cafeteria, gymnasium, and gymnatorium) via constant volume DX units with modulating flame natural gas furnaces.	*General HVAC* Classrooms and corridors are served by packaged variable air volume units with reheat. Heating is provided by hot water gas boilers. (System #4 in Table 11.3.2A) Heating and cooling will be provided to the assembly spaces (cafeteria, gymnasium, and gymnatorium) via constant volume DX units with on/off natural gas furnaces. (System #11 in Table 11.3.2A)
Cooling Equipment RTU 1-6 EER = 10.9 • Air-cooled, packaged DX units, EER = 10.9 Air Cooled Chiller EER = 13.2	*Cooling Equipment* • RTU-1 – EER = 9.0 • RTU-2 – EER = 9.0 • RTU-3 – EER = 9.0 • RTU-4 – EER = 9.3 • RTU-5 – EER = 9.3 • RTU-6 – EER = 9.3
Heating Equipment Furnaces • Gas fired furnaces with modulating flame • Rated Efficiency 80% • Furnaces provide 100% of heating to cafeteria, gymnasium, and gymnatorium, and temper outside air to classrooms Boilers • (2) gas fired boilers supply heating to classroom unit ventilators • Modulating flame controls • Rated Efficiency 87% • Hot water delta-T 20 °F	*Heating Equipment* Furnaces • Gas fired furnaces with on/off controls • Rated Efficiency 80% • Furnaces provide 100% of heating to cafeteria, gymnasium, and gymnatorium Boilers • (2) Gas fired boilers supply all heat to classrooms • On/off controls • Rated Combustion Efficiency 75% • Hot water delta-T 50 °F

Fans RTU's 1-3 • Supply DP = 5.0" • Supply efficiency = 60% • Return DP = 1.75" • Return efficiency = 60% RTU 4 • Supply DP = 5.0" • Supply efficiency = 60% • Return DP = 1.0" • Return efficiency = 60% RTU 5-6 • Supply DP = 5.0" • Supply efficiency = 60% • Return DP = 1.5" • Return efficiency = 60% Unit ventilator fans • Supply DP = 0.75" • Supply efficiency = 50% **Note: The fan power is based on assumptions made by the energy modeler. Deviations from these assumptions may have a significant impact on the level of savings.**	*Fans* Fan power compliant with ASHRAE 90.1-2004. Fan system efficiency (kW/cfm) is the same as the proposed design. Fan motor efficiency meets minimums specified in Table 10.8.
Heat Recovery 50% effective heat recovery on RTU's 1,2,3,5 & 6	*Heat Recovery* 50% effective heat recovery on RTU's 5 & 6
Pumping Equipment Minimally compliant with ASHRAE 90.1-2007	*Pumping Equiment* Pump power compliant with ASHRAE 90.1-2004. Pump system efficiency (kW/cfm) is the same as the proposed design. Motor efficiency meets minimums specified in Table 10.8. Hot water pumps have VFDs for continuous variable flow.

5. RESULTS

The proposed design, as understood by Viridian, includes the following energy efficient measures:

- Increased wall insulation- U = 0.056 Btu/hr-ft2-F instead of U = 0.151 Btu/hr-ft2-F
- Increased roof insulation- U = 0.046 Btu/hr-ft2-F instead of U = 0.063 Btu/hr-ft2-F
- More efficient windows- Ufen = 0.51 Btu/hr-ft2-F with SHGC = 0.38 instead of Ufen = 0.57 Btu/hr-ft2-F with SHGC = 0.39
- Reduced lighting power density (1.0 w/ft^2 vs 1.2 W/ft^2)
- Occupancy Sensors in classrooms
- CO2 ventilation controls in gymnasium and gymnatorium instead of just in gymnatorium
- Heat recovery on all RTU's except cafeteria
- High efficiency DX units (EER = 10.9 instead of 9.8)
- High efficiency air-cooled chiller ($EER_{average}$ = 13.2 instead of 9.1)
- 87% efficient condensing boiler with modulating flame controls instead of 80% efficient boiler with on/off controls
- Dedicated outdoor air system and unit ventilators reduce required fan power

The proposed design saves approximately $63,258, or 21.6% in total, when compared to the ECB Baseline based on ASHRAE 90.1-2004 Section 11.

.

TOTAL ENERGY SAVINGS

Case	Total Electricity Use (kWh)	Total Electricity Cost ($)	Total Gas Use (CCF)	Total Gas Cost ($)	Total Utility Cost ($)	Savings vs ECB Baseline ($)	Savings vs. ECB Baseline (%)
ECB Baseline	957,721	215,674	46001	76,874	292,548		
Design Case	769,177	169,901	35,648	59,389	229,290	$63,258	21.6%

When unregulated loads are separated out of the model results, the proposed design saves approximately 23.9%, compared to the ECB Baseline based on ASHRAE 90.1-2004 Section 11. The building exceeds the minimum 20% requirement for Local Law 86.

REGULATED LOAD ENERGY SAVINGS

Case	Total Electricity Use (kWh)	Total Electricity Cost ($)	Total Gas Use (CCF)	Total Gas Cost ($)	Total Utility Cost ($)	Savings vs ECB Baseline ($)	Savings vs. ECB Baseline (%)

2009 REPORTING FORM for Project Subject to the LEED® Rating and/or Water Use Reduction Provisions of Local Law 86 of 2005

1.15.09

DESIGN PHASE

General	**1**	Client Agency[1]……	NYCSCA
	2	Reporting Agency[2]……	NYCSCA
	3	Project Type (New Building, Addition, and/or Substantial Reconstruction), Name, and Address:	New Building PS/IS71R 1050 Targee Street Staten Island, NY,
	4	Building Identification Number (BIN)[3]……	
	5	Block(s) and Lot(s)……	
	6	FMS Number……	
	7	Occupancy Group[4]……	G Education
	8	Floor Area Subject to LEED® Requirements[5]……	110770
	9	Is All Energy Use in Project Area Metered Independently (Y/N)?	
Schedule[6]	**10**	Date of CP for Design or CP for Design and Construction……	
	11	Date of DOB Application……	
	12	Date of CP for Construction……	
	13	Date of Completion……	
Costs	**14**	Construction Cost (CC) of Work Subject to LEED® Requirements[7]	
	15	Project Cost[8]……	
	16	Capital Allocation for FY09[9]……	
	17	Domestic Plumbing Construction Cost ……	
Requirements		**LEED® Rating**	
	18	LEED® Silver (All occupancies except G, H-2) (Y/N)……	n/a
	19	LEED® Certified (Only G, H-2 Occupancies) (Y/N)……	Y (LEED certified equivalent required)
	20	Application to the USGBC for LEED Rating (Y/N)……	N
		Energy Cost Reduction	
	21	20-25% (Occupancies other than G; $12M≤CC<$30M) (Y/N)……	n/a
	22	25-30% (Occupancies other than G; CC≥$30M) (Y/N)……	n/a
	23	20-30% (Only G Occupancies; CC≥$12M) (Y/N)……	Y
		Domestic Water Use Reduction	
	24	Minimum 20% (Domestic Plumbing CC≥$.5M)	Y
	25	Minimum 30% (Domestic Plumbing CC≥$.5M)	N

CONSTRUCTION PHASE

Energy	**26**	Energy Sources Used in Project (electric, gas, purchased steam, #2 oil, #4 (mixed) oil, and/or #6 oil)……	electric, gas
	27	Electric Provider (Con- Ed, NYPA or LIPA)……	NYPA
	28	Gas Provider (Con-Ed or Keyspan)……	Con-Ed
	29	Reduction in Annual Electric Use (kwh)[10]……	188,551
	30	Annual Reduction in Sum of Monthly Peak Demands (kw/yr)[10]…	1151
	31	Annual Reduction in Peak Demand (kw/yr)[10]……	160
	32	Reduction in Annual Gas Use (therms/yr)[10]……	10,353
	33	Reduction in Annual #2, #4 (mixed), and/or #6 Oil Use (gals/yr)[10]	NA
	34	Reduction in Annual Purchased Steam Use (mlbs summer/ mlbs winter)[10]……	NA
Water	**35**	Potable Water Use Reduction[11] (gals/yr)……	367607
	36	Storm Water Runoff Reduction[11] (gals/yr)……	
Added Costs	**37**	Cost Attributable to LEED Compliance (include fees for energy analysis, commissioning agent, USGBC filing, and LEED expert)	
	38	Additional Construction Cost to Reduce Energy Cost (report only if subject to one of Energy Cost Reduction requirements above)….	
Green Power[12]	**39**	Annual Green Power Allocation Requested (kwh)……	269212
	40	Number of Years Annual Green Power Allocation is Required (yrs)	2
	41	Start Date of Power Allocation (mo/yr)……	

POST CONSTRUCTION PHASE

LEED	**42**	LEED® Rating Achieved (Certified, Silver, Gold, or Platinum)	
	43	Certification by the USGBC (Y/N)	

Notes:

1. The client agency is the agency that either will occupy the project or will sponsor another occupant.

2. The reporting agency is the agency responsible for identifying projects within their portfolio that are subject to LL86, for the expenditure of city funding on such projects, and for reporting to the Mayor's office. Note that, in some cases, the client agency may also be the reporting agency.

3. If the capital project involves an addition to and/or substantial reconstruction in an existing building, enter the BIN of the existing building. If available and if the capital project involves a new building, the BIN assigned by the Department of City Planning (DCP) should be entered. If a BIN is not available, enter N/A in the space provided.

4. The primary occupancy group classification is that under which the project would have been filed with the Department of Buildings (DOB) in accordance with the NYC Building Code that was in effect in 2005.

5. Floor areas indicated refer to the portion of the project that is subject to the LEED® or alternative rating system provisions in the law. For example, for a project that involves the substantial reconstruction of only a portion of a building, the floor area indicated refers only to that area, not to the area of the entire building.

6. Where actual dates are not yet available, they must be projected.

7. Construction costs requested here are only for the portion of the project that is subject to the relevant LL86 provisions. For example, where a project that has a large landscaping component as well as a smaller enclosed building component over $2,000,000, the construction cost reflects only the enclosed building portion of the project that is subject to the LEED® related provisions of the law. Note that all construction costs reported should be derived from or anticipate costs in the final CP for Construction or for Design and Construction and should include all mark-ups and contingencies as well as construction management fees.

8. Project cost is the sum of capitally eligible costs (per NYC Comptroller Directive 10) associated with an entire capital project, regardless of funding source. It could include such costs related to site acquisition, site preparation, furniture, fittings, and equipment, as well as to design and construction, and covers work on all portions of the project, including portions that may not be subject to the provisions of LL86.

9. Since projects typically take several years to complete and the city budget process runs on an annual cycle, each project is allocated a portion of the total project funds over several of the City's annual fiscal years until a project is complete and total project funds are expended. The allocations requested here represent the amount spent during fiscal year 2009 that ends June 30, 2009.

10. Consistent with the Rules for LL86, the calculation for energy use reduction must be performed in comparison to the NYS Energy Conservation Code in effect at the time the project is filed with the Department of Buildings.

11. Consistent with the Rules for LL86, the baseline for stormwater runoff and potable water use reduction must be calculated in accordance with the applicable credits in LEED NC 2.2 or LEED NC 2.1.

12. The information regarding green power must be provided here as part of the application for green power equivalents that may be submitted to the USGBC in order to achieve LEED® green power credits. See *Green Power Credit Application for Project Subject to LEED® Provisions of Local Law 86 of 2005* for more information.

P.S/I.S 71R Staten Island
Heating Calculation for the Size of Boilers

DVL#: 605 **Date: 3/23/2011**

New Building:

1. Instantaneous Block Heating Load and Conductive Heat Load

A. Conductive Heat Load:

(Total Glass Area)	X	(Glass "U")	X	59 °F			
15,070	X	0.51	X	59	=	453,456	BTU/HR
(*Total Wall Area)	X	(Wall "U")	X	59 °F			
59,924	X	0.06	X	59	=	212,131	BTU/HR
(Total Roof Area)	X	(Roof "U")	X	59 °F			
24,520	X	0.045	X	59	=	65,101	BTU/HR
				Total:		730,688	BTU/HR

B. Total Block Heating Load 730,688 BTU/HR

2. Heating Safety Factor 25%

3. Total Heating Load: 730,688 BTU/HR X 1.25 = 913,360 BTU/HR

4. As per SCA HVAC Design Standard No. 6.2.13 - Two (2) Boilers, each sized for 75% of the building total heating load shall be provided for the school.

One (1) Boiler Minimum Net Capacity:	913,360	X	0.75	=	**685,020** BTU/HR

Two (2) Boilers to be considered at the capacity = 685 MBH Each (minimum)
Actual Size from Catalog (VIESSMANN Boiler) = 763 MBH Each
LWT = 140 °F
EWT = 120 °F or less

Notes:
1. The "U" values considered in this calculations are in compliance with SCA standards Section: 4.0 Building Envelope
2. The boiler sizing is in compliance with SCA standards Section: 6.2.13 Sizing of Equipment.
3. *Total wall area equals the entire wall area minus the glass area.

POWER & SYSTEMS SYMBOL LIST

SYMBOL	DESCRIPTION
	CONDUIT AND WIRE RUN CONCEALED IN FLOOR, CEILING OR WALL. HASH MARKS DENOTE NUMBER OF WIRES IF MORE THAN TWO ARE REQUIRED. ARROWS DENOTE HOMERUNS OF PARTICULAR CIRCUITS, MINIMUM 2#12 THHN/THWN IN 3/4" CONDUIT. ALL BRANCH CIRCUITS FOR 120V IF GREATER THAN 100 FEET SHALL BE ONE SIZE LARGER MINIMUM, AND FOR 277V IF MORE THAN 200 FEET ONE SIZE LARGER MINIMUM (BOTH TO MEET VOLTAGE DROP REQUIREMENTS) " " DENOTES GROUND CONDUCTOR TO MATCH CIRCUIT WIRES
PNL-1	"PNL" INDICATES PANEL DESIGNATION AND "1" INDICATES CIRCUIT NUMBER. CIRCUIT WIRE SHALL BE MINIMUM 2#12 THHN/THWN IN 3/4" CONDUIT, U.O.I. ALL COMPUTER CIRCUIT SHALL ALSO BE PROVIDED WITH A SEPARATE NEUTRAL
	LIGHTING AND POWER PANEL BOARD, FLUSH MOUNTED IN WALL WITH COVER.
	LIGHTING AND POWER PANEL BOARD, SURFACE MOUNTED ON WALL.
	SAME AS ABOVE BUT WITH GUTTER TAP.
	WIRING TROUGH/SPLICE BOX, SIZE AS REQUIRED.
S_a	SINGLE POLE TOGGLE SWITCH. SUBSCRIPT DENOTES LIGHTING FIXTURES CONTROLLED. 'K' INDCATES KEY OPERATED SWITCH. '3' INDICATES THREE-WAY SWITCH. 'PL' INDICATES WITH PILOT LIGHT SWITCH. 'OC' INDICATES INTEGRATED WITH OCCUPANCY SENSOR. 'a' INDICATES LIGHTING FIXTURES CONTROL. 'e' INDCATES CONTROL OF EMERGNECY LIGHTING FIXTURE WITHIN THE ROOM OR SPACE INDICATED. REFER TO LIGHTING DWGS FOR LOCATION OF SWITCHES.
$S_{R/L}$	THREE POSITION KEY ACTIVATED, RAISE & LOWER, CONTROL SWITCH.
$S_{MS\ WP}$	MOTOR STARTER SNAP ACTION TOGGLE SWITCH WITH THERMO OVERLOAD. "WP" INDICATES WEATHER PROOF
	DUPLEX THREE WIRE GROUNDED RECEPTACLE 20A 125V (NEMA 5-20R)

Re: Architectural Acoustics Review
60% Contract Documents
PS/IS-71R
OAA File 3593A

Dear Mr. Diez:

We have reviewed the 60% drawings for PS/IS-71R concerning architectural acoustics recommendations contained in our 15 June 2010 30% review letter. The following items are either not shown in the current drawings or represent recommended changes to acoustical features. Findings concerning HVAC noise control and New York City Noise Code Compliance will be confirmed in a separate letter.

ELEVATOR MACHINE ROOM

A ceiling is recommended in the elevator machine room to reduce the level of machine noise in the overhead office area. The ceiling should have one layer of $^5/_8$-inch gypsum board overlaid with a 6-inch insulation blanket. There should be no openings in the ceiling and all piping should be supported from below.

GYMATORIUM

1. We have carried out a reverberation analysis of the current gymatorium design which indicates that acoustical block will not be needed in the walls. Acoustical panels (see specification at the end of this letter) are needed on the upper wall areas behind the fixed seating.

2. Ostergaard Acoustical Associates should review the specification for the acoustical deck for the gymatorium.

STUDENT DINING

3. It is recommended that a composite ceiling board capable of contributing to vertical sound isolation for overhead classrooms as well as good absorption be specified for the student dining ceiling. Such a product is CertainTeed "Adagio" which achieves CAC-40 and an NRC of 0.95. Unfortunately we know of no comparable products from other manufacturers. An Adagio cut is attached. The product is 2-inches thick and available with a reveal edge.

4. The Student Dining ceiling should be overlaid with 3½-inch insulation blanket.

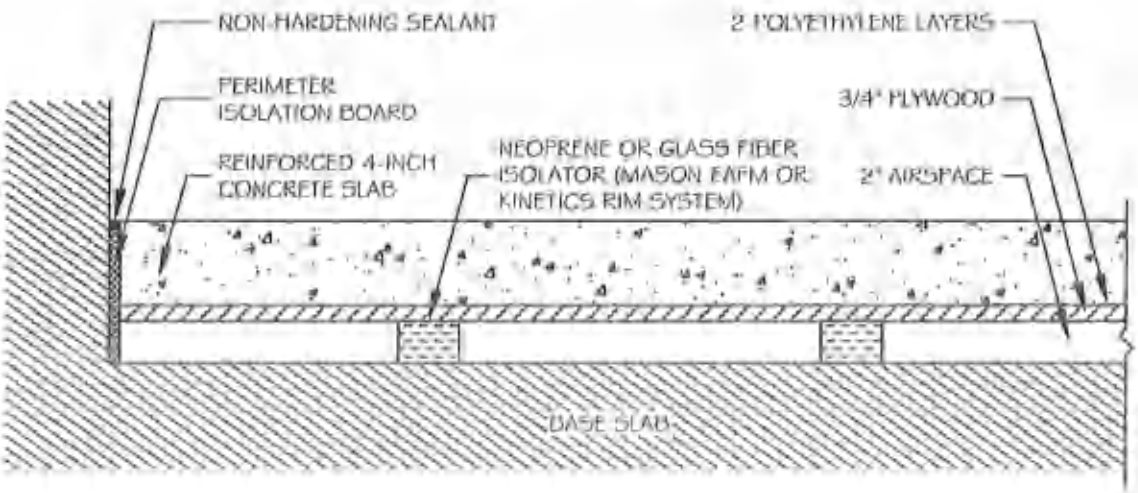
5. The ceiling air return openings should be ducted or fitted with acoustically treated transfer ducts and not fitted with open grilles.

GYMNASIUM

6. Ostergaard Acoustical Associates should review the specification for the acoustical deck for the gymnasium.

MUSIC SUITE

7. A floated concrete slab is needed throughout the music suite. The floated floor should comprise 4-inch thick normal weight concrete on plywood lost forms, supported on neoprene or glass fiber isolators as depicted below. Recommended isolators include the Kinetics Noise Control RIM System and Mason Industries EAFM neoprene isolators. Partitions within the suite should bear on the floated floor.



Doors

8. The entry doors and practice room doors should comprise STC-50 sound rated door assemblies. By "door assembly" is meant that the door panel, frame, seals, and hardware are all procured as a system from a single manufacturer with sole source responsibility. These are long lead items. Recommended manufacturers include Overly, Krieger, and Security Acoustics. Likewise, the side lights adjacent to practice room doors should be STC-50 sound rated window assemblies.

❑ ❑ ❑ ❑

We trust that the above recommendations are helpful and look forward to the team's questions and comments.

Sincerely yours,

OSTERGAARD ACOUSTICAL ASSOCIATES

SOUND ABSORBENT WALL PANELS FOR MUSIC SUITE
PS/IS-71R, 1050 TARGEE STREET, STATEN ISLAND, NEW YORK

ACOUSTICAL SPECIFICATION:
The sound absorbent wall panels shall meet the following requirements. All test data shall have been obtained within the last five years by an independent acoustical laboratory. Test reports shall be submitted to the architect for approval. If the fabric specified for the panels differs from the test report specimen, a sample of the fabric shall be submitted for testing by the acoustical consultant prior to fabrication.

The wall panels shall, at a minimum, have the following sound absorption coefficients when tested in accordance with ASTM Test Method C 423 and mounted according to ASTM Standard Practice E 795, mounting Type A.

1/3 Octave Frequency Band (Hz)	***125***	***250***	***500***	***1000***	***2000***	***4000***
Nominal 2" Thick Panels	*.20*	*.74*	*1.10*	*1.06*	*1.01*	*1.00*

[The above specification can generally be met by panels having a Sound Absorption Average (SAA) or Noise Reduction Coefficient (NRC) of 1.00.]

CertainTeed

Adagio™

Designer Series Fiberglass/Mineral Fiber Composite Ceilings

Features:

- Unique composite panel that offers optimum acoustical performance
- Encapsulated fiberglass layer provides exceptional sound absorption and acoustic comfort (0.95 NRC—Class A absorber)
- Mineral backboard offers highly effective sound containment (CAC 40)
- Can enhance space privacy compliance (HIPAA, GLBA)
- High performance Overtone® finish combines beauty and durability
- Enhanced light reflectance and diffusion complements exceptional aesthetics
- Contributes toward LEED® certification

Re: Acoustical Compliance — PS/IS-71R
OAA File 3593A

Dear Mr. Diez:

As you know, Ostergaard Acoustical Associates, as acoustical consultants for PS/IS-71R, has been involved with the aspects of the school's design that relate to correct acoustical planning. These include meeting the acoustical requirements of the NYC Green Schools Guide, SCA Design Requirements, and the New York City Noise Code. With the incorporation of the five items below the school will comply with these requirements, with the exception listed for GSG Q8.1. This includes compliance with all items previously identified in our 60% and 100% Reviews.

1. The duct silencer schedule on M003.00 does not match our recommended silencer schedule given in our 5 October 2010 letter. For reference this recommended schedule is reprinted below.

2. On Drawing M102.00 a framed gypsum board duct enclosure is needed around ST-7S and the RTU-5 supply ductwork upstream of ST-7S.

3. Air velocities in Gymnasium branch ducts shown on M102.00 are excessive; the maximum velocity in these ducts should be 720 fpm.

4. Air velocities in the Gymatorium duct currently shown on M103.00 as 30-inch-diameter and 30x24 are excessive; the maximum velocity should be 550 fpm.

5. The chiller specification section 15660, ¶2.01 L, should be revised to read "The maximum acceptable sound pressure levels for the outdoor air cooled modular chiller shall be as follows **when measured at a distance of 30 feet.**"

With the exception of the above 5 items, all items identified at our 60% and 100% review are now addressed. Specifically our findings are as follows:

GSG Q8.1 Establishes minimum acoustical performance requirements for classrooms including:

- Background noise levels associated with HVAC systems;
- Unoccupied reverberation times;
- Sound isolation performance of constructions; and,
- Sound isolation from exterior noise sources.

Finding: When the original background noise analysis for PS/IS-71R was carried out, the background noise criterion for classrooms was 35 dB(A). Because of the planned use of unit ventilators, none of the classroom met the criterion. Subsequently the SCA relaxed the classroom criterion to 40 dB(A), which is met by all but two classrooms and the music classroom. The two classrooms are 117 and 119, where we predict that the background level will be 44 dB(A). The music classroom, with a criterion of 30 dB(A), will have a level of 39 dB(A). With the exception of the background level in the two classrooms and music, the school is in compliance with Q8.1.

GSG Q.8.2 Establishes the sound isolation requirements for special spaces.

Finding: Complies.

GSG Q8.3 Establishes the need for façade elements, including fenestration, to adequately control the penetration of exterior noises into the school's interior.

Finding: This credit is not applicable because the standard SCA windows, in conjunction with the masonry façade and roof construction, are sufficient to control the penetration of exterior noise.

DR 1.3.1.9 Architectural Acoustics

Finding: Complies.

DR 6.2.25 HVAC Acoustical Standards

Finding: See findings for GSG Q8.1 otherwise fully complies.

New York City Noise Code 2006

Finding: Full compliance anticipated for noise emissions from HVAC equipment with incorporation of item five above.

Sincerely yours,

OSTERGAARD ACOUSTICAL ASSOCIATES

Re: Acoustical Compliance — PS/IS-71R
OAA File 3593A

Dear Mr. Diez:

As you know, Ostergaard Acoustical Associates, as acoustical consultants for PS/IS-71R, has been involved with the aspects of the school's design that relate to correct acoustical planning. These include meeting the acoustical requirements of the NYC Green Schools Guide, SCA Design Requirements, and the New York City Noise Code. Specifically our findings are as follows:

GSG Q8.1 Establishes minimum acoustical performance requirements for classrooms including:

- Background noise levels associated with HVAC systems;
- Unoccupied reverberation times;
- Sound isolation performance of constructions; and,
- Sound isolation from exterior noise sources.

Finding: When the original background noise analysis for PS/IS-71R was carried out, the background noise criterion for classrooms was 35 dB(A). Because of the planned use of unit ventilators, none of the classroom met the criterion. Subsequently the SCA relaxed the classroom criterion to 40 dB(A), which is met by all but two classrooms and the music classroom. The two classrooms are 117 and 119, where we predict that the background level will be 44 dB(A). The music classroom, with a criterion of 30 dB(A), will have a level of 39 dB(A). With the exception of the background level in the two classrooms and music, the school is in compliance with Q8.1.

GSG Q.8.2 Establishes the sound isolation requirements for special spaces.

Finding: Complies.

GSG Q8.3 Establishes the need for façade elements, including fenestration, to adequately control the penetration of exterior noises into the school's interior.

Finding: This credit is not applicable because the standard SCA windows, in conjunction with the masonry façade and roof construction, are sufficient to control the penetration of exterior noise.

DR 1.3.1.9 Architectural Acoustics

Finding: Complies.

DR 6.2.25 HVAC Acoustical Standards

Finding: See findings for GSG Q8.1 otherwise fully complies.

New York City Noise Code 2006

Finding: Complies.

❑ ❑ ❑ ❑

All items identified during our previous 60%, 100%, and Bid Document reviews are now addressed. With the exception of the classrooms identified in GSG Q8.1, the school design is in full compliance.

Sincerely yours,

OSTERGAARD ACOUSTICAL ASSOCIATES
