

Kahua Platform Updates – UI Changes

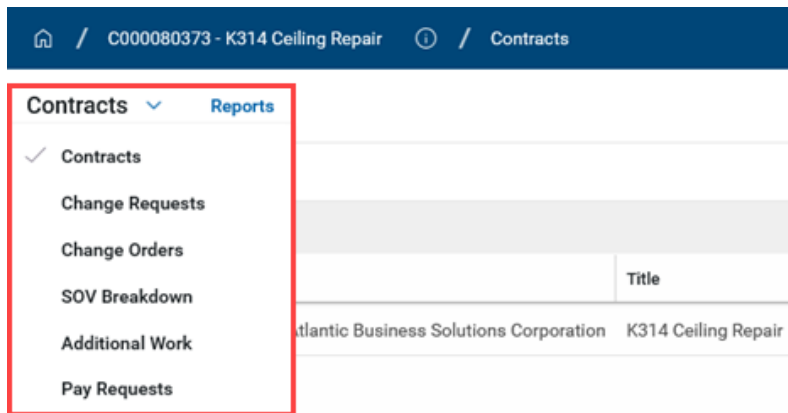

April 12, 2025

Log View Action Bar Updates and App Group / List Navigation

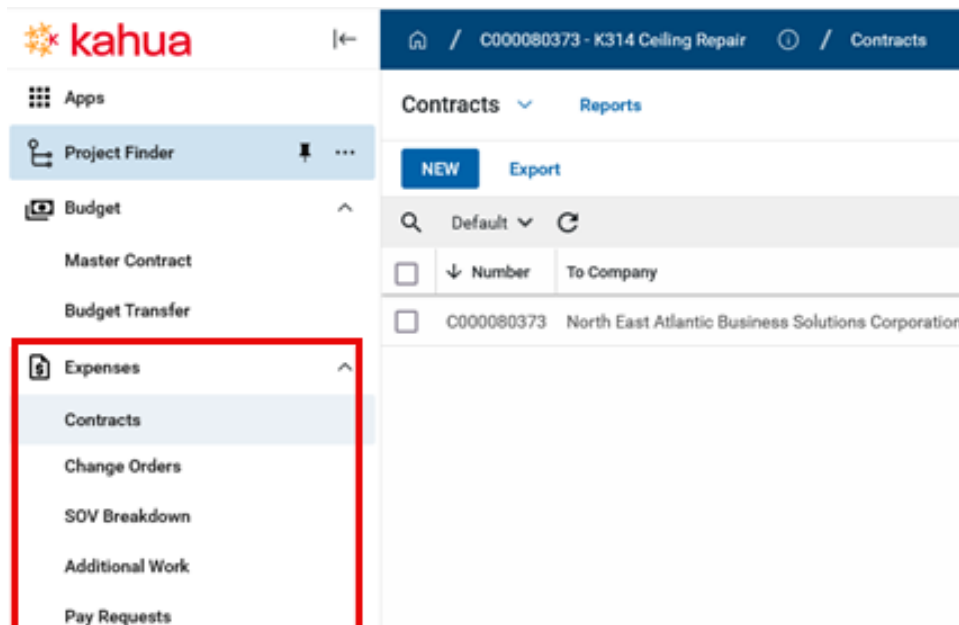

Headers: Kahua has updated the styling of the actions and list/app group navigation in our log view header. All buttons have been updated to match the new style.

In-App / Sub-Applications: You can navigate between sub-applications in an app group and through different lists within an individual app by clicking the expand icon  next to the app group name in the header.

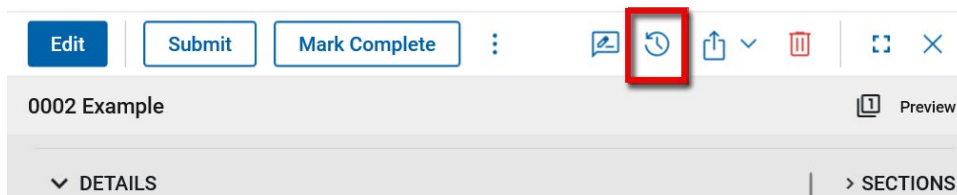

Launch Bar / Sub-Applications: The App menu from the launch bar now shows sub-applications within an app group (e.g., Expenses> Contracts, Change Requests, Change Orders). Click the expand icon next to the app group name in the launch bar to show the available sub-applications.

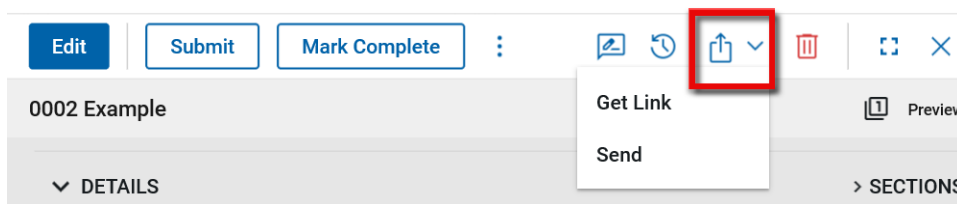

Detail View Action Bar Updates

The **View History** button has been updated to an icon.

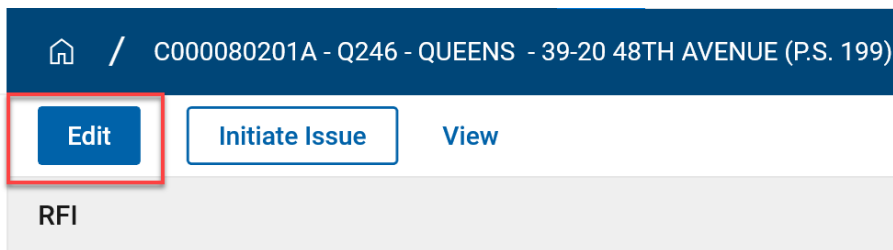

Actions for sharing a record such as **Get Link** and **Send** have been combined into an icon with a sub-menu.

Workflow Buttons Updates

Workflow buttons will now appear at the **top of records** rather than at the bottom and are newly styled to be in line with Kahua's new UI direction.

Primary workflow buttons with a **solid blue styling** to highlight the primary action available to users, while other actions appear as white buttons with blue outlines.

Non-workflow actions such as **Export**, **Import**, and **View** will appear to the right without an outline. This visual differentiation ensures improved visibility and helps users quickly identify and access the most important actions.
